This has resulted in a considerable lack of trust in the EU food safety system A recent legislative reform supported by new legal cases aims to restore confidence in the risk analysis system by reshaping the meaning of data ownership in this domain While this regulatory approach is being established breakthrough analytics techniques are encouraging thinking about the next steps in managing food safety data in the age of machine learning The book focuses on two core topics data ownership and data governance by evaluating how the regulatory framework addresses the challenges raised by Big Data and its analysis in an applied significant and overlooked domain To do so it adopts an interdisciplinary approach that considers both the technological advances and the policy tools adopted in the European Union while also assuming an ethical perspective when exploring potential solutions The conclusion puts forward a proposal an ethical blueprint for identifying the principles Security Accountability Fairness Explainability

Transparency and Privacy to be observed when processing Big Data for food safety purposes including by means of machine learning Possible implementations are then discussed also in connection with two recent legislative proposals namely the Data Governance Act and the Artificial Intelligence Act **Privacy on the Ground** Kenneth A. Bamberger, Deirdre K. Mulligan, 2015-10-23 An examination of corporate privacy management in the United States Germany Spain France and the United Kingdom identifying international best practices and making policy recommendations Barely a week goes by without a new privacy revelation or scandal Whether by hackers or spy agencies or social networks violations of our personal information have shaken entire industries corroded relations among nations and bred distrust between democratic governments and their citizens Polls reflect this concern and show majorities for more broader and stricter regulation to put more laws on the books But there was scant evidence of how well tighter regulation actually worked on the ground in changing corporate or government behavior until now This intensive five nation study goes inside corporations to examine how the people charged with protecting privacy actually do their work and what kinds of regulation effectively shape their behavior And the research yields a surprising result The countries with more ambiguous regulation Germany and the United States had the strongest corporate privacy management practices despite very different cultural and legal environments The more rule bound countries like France and Spain trended instead toward compliance processes not embedded privacy practices At a crucial time when Big Data and the Internet of Things are snowballing Privacy on the Ground helpfully searches out the best practices by corporations provides guidance to policymakers and offers important lessons for everyone concerned with privacy now and in the future Sustainable Aquaculture Faisal I.
