Governance Of Marine Fisheries And Biodiversity Conservation Interaction And Co Evolution:

Governance of Marine Fisheries and Biodiversity Conservation Serge M. Garcia, Jake Rice, Anthony Charles, 2014-07-15 Governance of Marine Fisheries and Biodiversity Conservation explores governance of the world's oceans with a focus on the impacts of two inter connected but historically separate streams of governance one for fisheries the other for biodiversity conservation Chapters most co authored by leading experts from both streams investigate the interaction of these governance streams from ecological economic social and legal perspectives with emphasis on policies institutions processes and outcomes on scales from the global to the local community and with coverage of a range of themes and regions of the world The book opens with chapters setting the historical context for the two marine governance streams and framing the book's exploration of whether as the streams increasingly interact there will be merger or collision convergence or co evolution The concluding chapter synthesizes the insights from throughout the book relative to the questions posed in the opening chapters It also draws conclusions about future needs and directions in the governance of marine fisheries and biodiversity vital to the future of the world's oceans With cutting edge chapters written by many leading international experts in fisheries management and biodiversity conservation and edited by three leading figures in this crucially important subject Governance of Marine Fisheries and Biodiversity Conservation is an essential purchase for fisheries scientists economists resource managers and policymakers and all those working in fields of biodiversity conservation marine ecology and coastal livelihoods Libraries in all universities and research establishments where environmental and or marine studies conservation ocean policy and law biological and life sciences and fisheries management are studied and taught should have copies of this most important book [Rethinking Fisheries Governance](#)

Hoang Viet Thang, 2017-08-11 This book explores how the state can foster collective action by fisher's communities in fisheries management It presents a different perspective from Elinor Ostrom's classic work on the eight institutional conditions that foster collective action in natural resource management and instead emphasizes the role of the state in fisheries co management engaging a state centric notion of meta governance It argues that first the state is required to foster collective action by fishers and secondly that the current fisheries co management arrangements are state centric The study develops these arguments through the analysis of three case studies in Japan Vietnam and Norway The author also makes a theoretical contribution to governance literature by developing Ostrom's society centric framework in a way which makes it more amenable to the analysis of state capacity and government intervention in a comparative context This book will appeal to students and scholars of global governance fisheries management co management and crisis management as well as practitioners of fisheries management *International Law for Small-Scale Fisheries* Julia N. Nakamura, 2025-03-27 This book provides an original and groundbreaking account of the applicability and key contributions of international law to small scale fisheries a fisheries subsector that has been historically overlooked by governments and international legal

scholarship Small scale fisheries constitute most of the world's capture fisheries workforce they sustain the livelihoods of fishers and their communities while building and transmitting traditional knowledge and culture Significant attention has been given to small scale fisheries by the international community over the past decade building the momentum for dedicated research on such a topic Nevertheless the literature examining small scale fisheries from an international legal perspective remains scarce This book fills this gap by systemically examining different international legal regimes to unravel the normative foundations for securing the meaningful participation of small scale fisheries peoples in international fisheries management It connects the ecosystem approach a key principle of international fisheries law and the human rights regime to elucidate the benefits that participatory international fisheries management brings to enhance both the ecological and social aspects of fisheries sustainability It also examines the extent to which fisheries governance is democratic and provides an enabling framework for the integration of fishers knowledge into international fisheries management It is thereby oriented toward more justice and fair outcomes for small scale fisheries This book will be a valuable resource for academics and researchers with an interest in the governance of fisheries in international law the law of the sea environmental law and human rights law as well as to practitioners and policymakers working on the development and implementation of laws and policies governing fisheries and natural resources

Environmental Governance and Common Pool Resources Michael Faure, Peter Mascini, Jing Liu, 2017-09-07 This book analyses the drivers of specific common pool resource problems particularly in fisheries and forestry examining the way in which private and public regulation have intervened to fight the common pool resource problem by contributing to the establishment and maintenance of property rights It focuses on the various forms of regulation that have been put in place to protect fisheries and forestry over the past decades both from a theoretical as well as from a policy perspective comparing the concrete interaction of legal and policy instruments in eight separate jurisdictions

Governing the Coastal Commons Derek Armitage, Anthony Charles, Fikret Berkes, 2017-04-28 Coastal communities depend on the marine environment for their livelihoods but the common property nature of marine resources poses major challenges for the governance of such resources Through detailed cases and consideration of broader global trends this volume examines how coastal communities are adapting to environmental change and the attributes of governance that foster deliberate transformations and help to build resilience of social and ecological systems Governance here reflects how communities societies and organisations e.g. fisher cooperatives government agencies choose to organise themselves to make decisions about important issues such as the use and protection of coastal commons e.g. fishery resources The book shows how a governance approach generates insights into the specific forms and arrangements that enable coastal communities to steer away from unsustainable pathways It also provides an analytical lens to consider important questions of power knowledge and legitimacy in linked social ecological systems Chapters highlight examples in which communities are engaging in deliberative transformations to build resilience and enhance their well being These

transformations and efforts to build resilience are emerging through multi level collaboration shared learning innovative policies and institutional arrangements such as new property rights regimes and co management methodologies that engage with indigenous cultural practices and entrepreneurial activities including income and livelihood diversification Case studies are included from a range of countries including Canada Japan Brazil Indonesia Mexico South Africa Thailand the South Pacific and Europe The authors integrate theory with practical examples to improve coastal marine policy and governance and draw upon emerging concepts from social ecological resilience and transformations adaptive governance and the scholarship on the commons

High Seas Governance Robert C. Beckman, Millicent McCreath, J. Ashley Roach, Zhen Sun, 2018-11-26 *High Seas Governance Gaps and Challenges* identifies gaps in and challenges to the existing legal regime in the protection and preservation of the marine environment of the high seas including sensitive marine areas The gaps identified in the book include the failure of liability and compensation schemes to cover pollution of the high seas and the fact that no state has the responsibility to clean up pollution of the high seas One common theme of the book is that it is necessary to identify a state other than flag states port states or coastal states which should have an obligation to exercise jurisdiction and control over certain activities on the high seas
