## **Governing Water Contentious Transnational Politics And Global Institution Building Global Environmental Accord:**

*Governing Water* Ken Conca, 2006 A theoretical and case study exploration of water politics demonstrates the emergence of alternative institutional forms of global environmental governance that go beyond traditional interstate regimes

*Transboundary Hydro-Governance* Jacques Ganoulis, Jean Fried, 2018-06-06 Attending water security is an important challenge and a major systemic risk humanity faces in the years to come This is due to population increase over consumption of water especially in agriculture climate change and various forms of water pollution The issue becomes more complicated in transboundary water catchments that cover almost half of the world's land surface with about 60% of global river flow and 40% of the world's population Also in many parts of the planet like Saharan Africa population depends on groundwater resources located in transboundary aquifer systems These facts illustrate the importance of the book's subject which is the governance of transboundary waters both surface and groundwater The book is written by two distinguished scientists who having worked in various international institutions like UNESCO GEF UNEP and at the European Commission have both an extended expertise on how to bridge the gap between science and political decision making which is the main factor for an effective governance of water resources What is new in the book is the integrated analysis of transboundary governance of both surface water and groundwater as it occurs in reality In current literature groundwater is still often missing for the benefit of surface water or on the contrary it is treated separately from surface water The most important feature of the book is to distinguish between the real and a good or an effective transboundary water governance and to provide practical tools methodologies and examples for its implementation in the field Published timely during 2018 the book will contribute to address successfully practical problems of governance of transboundary waters that represent a very important part of our precious fresh water resources

Global Environmental Assessments Ronald Bruce Mitchell, 2006 A comparative analysis of global environmental assessments shows the importance of policy salience scientific credibility and social and political legitimacy in determining the influence of scientific assessments on global environmental policy

**Water for Food Security, Nutrition and Social Justice** Lyla Mehta, Theib Oweis, Claudia Ringler, Barbara Schreiner, Shinee Varghese, 2019-09-19 This book is the first comprehensive effort to bring together Water Food Security and Nutrition FSN in a way that goes beyond the traditional focus on irrigated agriculture Apart from looking at the role of water and sanitation for human well being it proposes alternative and more locally appropriate ways to address complex water management and governance challenges from the local to global levels against a backdrop of growing uncertainties The authors challenge mainstream supply oriented and neo Malthusian visions that argue for the need to increase the land area under irrigation in order to feed the world's growing population Instead they argue for a reframing of the debate concerning production processes waste food consumption and dietary patterns whilst proposing alternative strategies to improve water and land

productivity putting the interests of marginalized and disenfranchized groups upfront The book highlights how accessing water for FSN can be challenging for small holders vulnerable and marginalized women and men and how water allocation systems and reform processes can negatively affect local people s informal rights The book argues for the need to improve policy coherence across water land and food and is original in making a case for strengthening the relationship between the human rights to water and food especially for marginalized women and men It will be of great interest to practitioners students and researchers working on water and food issues

Adaptive Governance D. G. Webster, 2009 Develops and applies an innovative theoretical framework that links domestic economic vulnerabilities to national policy positions and international management in the context of Atlantic fisheries The rapid expansion of the fishing industry in the last century has raised major concerns over the long term viability of many fish species International fisheries organizations have failed to prevent the overfishing of many stocks but succeeded in curtailing harvests for some key fisheries In Adaptive Governance D G Webster proposes a new perspective to improve our understanding of both success and failure in international resource regimes She develops a theoretical approach the vulnerability response framework which can increase understanding of countries positions on the management of international fisheries based on linkages between domestic vulnerabilities and national policy positions Vulnerability mainly economic in this context acts as an indicator for domestic susceptibility to the increasing competition associated with open access and related stock declines Because of this relationship vulnerability can also be used to trace the trajectory of nations positions on fisheries management as they seek political alternatives to economic problems Webster tests this framework by using it to predict national positions for eight cases drawn from the International Commission for the Conservation of Atlantic Tunas ICCAT These studies reveal that there is considerable variance in the management measures ICCAT has adopted both between different species and in dealing with the same species over time and that much of this variance can be traced to vulnerability response behavior Little attention has been paid to the ways in which international regimes change over time Webster s innovative approach illuminates the pressures for change that are generated by economic competition and overexploitation in Atlantic fisheries Her work also identifies patterns of adaptive governance as national responses to such pressures culminate in patterns of change in international management

**Green Planet Blues** Geoffrey D. Dabelko, Ken Conca, 2019-09-06 Revised and updated throughout this unique anthology examines global environmental politics from a range of perspectives and captures the voices of both the powerless and the powerful Paradigms of sustainability environmental security and ecological justice illustrate the many ways environmental challenges and their solutions are framed in contemporary international debates about climate water forests toxics energy food and biodiversity Organized thematically the selections offer a truly global scope Seventeen new readings explore climate justice globalization land and water grabs climate change and conflict China s international environmental relations and the future of climate politics in the wake of the Paris Agreement This book stresses the

Bibliographie Internationale de Science Politique The British Library of Political and Economic Science,2007-10-31 First published in 1952 the International Bibliography of the Social Sciences anthropology economics political science and sociology is well established as a major bibliographic reference for students researchers librarians     *Advanced Introduction to Water Politics* Conca, Ken,2021-08-27 In this authoritative Advanced Introduction Ken Conca expertly examines the fundamentals of water politics covering poverty health and livelihoods alongside key areas such as water law the environment international politics and the growing role of climate change in water governance     *Negotiating Water Governance* Emma S. Norman,Christina Cook,2016-03-09 Those who control water hold power Complicating matters water is a flow resource constantly changing states between liquid solid and gas being incorporated into living and non living things and crossing boundaries of all kinds As a result water governance has much to do with the question of boundaries and scale who is in and who is out of decision making structures Which of the many boundaries that water crosses should be used for decision making related to its governance Recently efforts to understand the relationship between water and political boundaries have come to the fore of water governance debates how and why does water governance fragment across sectors and governmental departments How can we govern shared waters more effectively How do politics and power play out in water governance This book brings together and connects the work of scholars to engage with such questions The introduction of scalar debates into water governance discussions is a significant advancement of both governance studies and

scalar theory decision making with respect to water is often implicitly a decision about scale and its related politics When water managers or scholars explore municipal water service delivery systems argue that integrated approaches to salmon stewardship are critical to their survival query the damming of a river to provide power to another region and investigate access to potable water they are deliberating the politics of scale Accessible engaging and informative the volume offers an overview and advancement of both scalar and governance studies while examining practical solutions to the challenges of water governance

**Subnational Hydropolitics** Scott M. Moore, 2018-06-01 The prospect of international conflict over water has long been the subject of academic and popular concern but subnational political conflict is considerably more common and almost certainly imposes greater economic and environmental costs Indeed subnational hydropolitics are an important feature of several large countries including the United States India and China Moreover disputes between water users in shared river basins have often persisted despite repeated attempts by central governments to resolve them through both persuasion and coercion Yet despite the growing threat of water scarcity around the world little research exists on sub national politics of shared water resources This book attempts to fill the gap by explaining how and why hydropolitics play out within countries as well as between them Subnational Hydropolitics re examines the issue of water conflict by examining conflicts at the subnational rather than international level By examining several in depth case studies of both conflict and cooperation Scott Moore argues that increasing sub national water conflict is driven by two inter linked forces identity politics which gives subnational politicians a reason to compete over shared water resources and political decentralization which provides them with the tools to do so To understand politics at the subnational level the book blends insights from both the environmental governance and comparative politics literatures By examining the challenges many countries face in achieving cooperation over shared water resources the book helps to shed light on different mechanisms and processes for solving cooperation problems at the regional scale lessons relevant to tackling a wide range of transboundary environmental problems including air pollution urbanization and ecosystem protection But at its core this book promises a definitive contribution to the growing sub field of environmental politics centered on understanding how different countries attempt to solve the problems inherent in governing water resources in shared river basins

**Water Politics** Farhana Sultana, Alex Loftus, 2019-09-06 Scholarship on the right to water has proliferated in interesting and unexpected ways in recent years This book broadens existing discussions on the right to water in order to shed critical light on the pathways pitfalls prospects and constraints that exist in achieving global goals as well as advancing debates around water governance and water justice The book shows how both discourses and struggles around the right to water have opened new perspectives and possibilities in water governance fostering new collective and moral claims for water justice while effecting changes in laws and policies around the world In light of the 2010 UN ratification on the human right to water and sanitation shifts have taken place in policy legal frameworks local implementation as well as in national dialogues Chapters in the book illustrate the novel ways

in which the right to water has been taken up in locations drawn globally highlighting the material politics that are enabled and negotiated through this framework in order to address ongoing water insecurities This book reflects the urgent need to take stock of debates in light of new concerns around post neoliberal political developments the challenges of the Anthropocene and climate change the transition from the Millennium Development Goals MDGs to the Sustainable Development Goals SDGs as well as the mobilizations around the right to water in the global North This book is essential reading for scholars and students of water governance environmental policy politics geography and law It will be of great interest to policymakers and practitioners working in water governance as well as the human right to water and sanitation

*Water Politics* David L. Feldman, 2017-02-27 As the world faces another water crisis it is easy to understand why this precious and highly disputed resource could determine the fate of entire nations In reality however water conflicts rarely result in violence and more often lead to collaborative governance however precarious In this comprehensive and accessible text David Feldman introduces readers to the key issues debates and challenges in water politics today Its ten chapters explore the processes that determine how this unique resource captures our attention the sources of power that determine how we allocate use and protect it and the purposes that direct decisions over its cost availability and access Drawing on contemporary water controversies from every continent from Flint Michigan to Mumbai Sao Paulo and Beijing the book argues that cooperation and more equitable water management are imperative if the global community is to adequately address water challenges and their associated risks particularly in the developing world While alternatives for enhancing water supply including waste water re use desalination and conservation abound without inclusive means of addressing citizens concerns their adoption faces severe hurdles that can impede cooperation and generate additional conflicts

**Spon's Civil Engineering and Highway Works Price** Lisa Palmer, 2016-12-01 As water resources diminish with increasing population and economic pressures as well as global climate change this book addresses a subject of ever increasing local and global importance In many areas water is not only a vital resource but is also endowed with an agency and power that connects people spirit beings place and space The culmination of a decade of ethnographic research in Timor Leste this book gives a critical account of the complex social and ecological specificities of a water focused society in one of the world s newest nations Comparatively framed by international examples from Asia South America and Africa that reveal the need to incorporate and foreground cultural diversity in water governance it provides deep insight into the global challenge of combining customary and modern water governance regimes In doing so it addresses a need for sustained critical ecological inquiry into the social issues of water governance Focusing on the eastern region of Timor Leste the book explores local uses beliefs and rituals associated with water It identifies the ritual ecological practices contexts and scales through which the use negotiation over and sharing of water occurs and its influence on the entire sociocultural system Building on these findings the book proposes effective conceptual and methodological tools for advancing community

engagement and draws out lessons for more integrated and sustainable water governance approaches that can be applied elsewhere This book will be of great interest to students and researchers in environmental studies environmental policy and governance

**The Water-Food-Energy Nexus** Jeremy Allouche, Carl Middleton, Dipak Gyawali, 2019-04-09 The world of development thinkers and practitioners is abuzz with a new lexicon the idea of the nexus between water food and energy which is intuitively compelling It promises better integration of multiple sectoral elements a better transition to greener economies and sustainable development However there appears to be little agreement on its precise meaning whether it only complements existing environmental governance approaches or how it can be enhanced in national contexts One current approach to the nexus treats it as a risk and security matter while another treats it within economic rationality addressing externalities across sector A third perspective acknowledges it as a fundamentally political process requiring negotiation amongst different actors with distinct perceptions interests and practices This perspective highlights the fact that technical solutions for improving coherence within the nexus may have unintended and negative impacts in other policy areas such as poverty alleviation and education The Water Food Energy Nexus Power Politics and Justice lays out the managerial technical definitions of the nexus and challenges these conceptions by bringing to the forefront the politics of the nexus around two key dimensions a dynamic understanding of water food energy systems and a normative positioning around nexus debates in particular around social justice The authors argue that a shift in nexus governance is required towards approaches where limits to control are acknowledged and more reflexive plural strategies adopted This book will be of interest to academic researchers policy makers and practitioners in the fields of international development studies environmental politics and science and technology studies as well as international relations

**Water, Peace, and War** Brahma Chellaney, 2013-04-11 This pioneering and authoritative study considers the profound impact of the growing global water crunch on international peace and security as well as possible ways to mitigate the crisis Although water is essential to sustaining life and livelihoods geostrategist Brahma Chellaney argues that it remains the world s most underappreciated and undervalued resource One sobering fact is that the retail price of bottled water is already higher than the international spot price of crude oil But unlike oil water has no substitute raising the specter of water becoming the next flashpoint for conflict Water war as a concept may not mesh with the conventional construct of warfare especially for those who plan with tanks combat planes and attack submarines as weapons Yet armies don t necessarily have to march to battle to seize or defend water resources Water wars in a political diplomatic or economic sense are already being waged between riparian neighbors in many parts of the world fueling cycles of bitter recrimination exacerbating water challenges and fostering mistrust that impedes broader regional cooperation and integration The danger is that these water wars could escalate to armed conflict or further limit already stretched food and energy production Writing in a direct nontechnical and engaging style Brahma Chellaney draws on a wide range of research from scientific and policy fields to examine the different global linkages between water and peace Offering

a holistic picture and integrated solutions his book promises to become the recognized authority on the most precious natural resource of this century and how we can secure humankind's water future

**Blue Covenant** Maude Barlow, 2009-05-01 A cautionary account of climate change and the global water supply You will not turn on the tap in the same way after reading this book Robert Redford In a book hailed by Publishers Weekly as a passionate plea for access to water activism Blue Covenant addresses an environmental crisis that together with global warming poses one of the gravest threats to our survival How did the world's most vital resource become imperiled And what must we do to pull back from the brink In stark and nearly devastating prose world renowned activist and bestselling author Maude Barlow who is featured in the acclaimed documentary Flow discusses the state of the world's water Barlow examines how water companies are reaping vast profits from declining supplies and how ordinary people from around the world have banded together to reclaim the public's right to clean water creating a grassroots global water justice movement While tracing the history of international battles for the right to water she documents the life and death stakes involved in the fight and lays out the actions that we as global citizens must take to secure a water just world for all Booklist Sounds the water alarm with conviction and authority Kirkus Reviews This book proves that water deserves another destiny Eduardo Galeano Blue Covenant will inspire civil society movements around the world Vandana Shiva

**Water Governance in the Face of Global Change** Claudia Pahl-Wostl, 2015-09-14 This book offers the first comprehensive treatment of multi level water governance developing a conceptual and analytical framework that captures the complexity of real water governance systems while also introducing different approaches to comparative analysis Applications illustrate how the ostensibly conflicting goals of deriving general principles and of taking context specific factors into account can be reconciled Specific emphasis is given to governance reform adaptive and transformative capacity and multi level societal learning The sustainable management of global water resources is one of the most pressing environmental challenges of the 21st century Many problems and barriers to improvement can be attributed to failures in governance rather than the resource base itself At the same time our understanding of complex water governance systems largely remains limited and fragmented The book offers an invaluable resource for all researchers working on water governance topics and for practitioners dealing with water governance challenges alike
