Paving the Way for an Open Service Market* Han Zuidweg,Mario Campolargo,Jaime Delgado,Al Mullery,2008-01-03 Paving the Way for an Open Service Market We live in an age when powerful communications technology is becoming available to everyone From our home we can send and receive not only analogue voice but also growing volumes of digital information and even intelligence in the form of agents We are becoming increasingly mobile and are expecting the same level of connectivity in the home in the office and on the road The regulatory and commercial environment in which we communicate is changing The telecommunications market is becoming increasingly competitive The Internet is erasing the borders between information technology and telecommunications And

the way we do business is ever more dominated by electronic exchanges of information Is our technology ready for the open market of networks and services Can we manage the growing complexity of computing and telecommunications technology and place it at the service of the people The challenge for the research community is to develop the tools and techniques that will ultimately bring the full power of communications and information to everyone in a way that everyone can easily use The Sixth International Conference on Intelligence in Services and Networks IS N 99 is all about technology for paving the way to the open services market Since the first IS N conference in 1992 the focus of the IS N program has continually shifted We see existing technologies maturing while new ones emerge but the bottom line has always been putting technology at the service of the people

Fundamentals of Computer Networks Matthew N. O. Sadiku,Cajetan M. Akujuobi,2022-08-29 This textbook presents computer networks to electrical and computer engineering students in a manner that is clearer more interesting and easier to understand than other texts All principles are presented in a lucid logical step by step manner As much as possible the authors avoid wordiness and giving too much detail that could hide concepts and impede overall understanding of the material Ten review questions in the form of multiple choice objective items are provided at the end of each chapter with answers The review questions are intended to cover the little tricks which the examples and end of chapter problems may not cover They serve as a self test device and help students determine how well they have mastered the chapter

Managing Projects in Telecommunication Services Mostafa Hashem Sherif, 2006-10-13 Effective project management tailored to the needs of the telecommunications industry In our rapidly changing world the information and communication technologies and services have an immense impact on virtually all aspects of our lives With his deep understanding of the telecommunication services and his rich experiences in both standardization activities and teaching practice Dr Sherif's book provides a very clear analysis of development projects in telecommunication services I believe the readers will find this book very useful and interesting Houlin Zhao Director Telecommunication Standardization Bureau International Telecommunication Union Dr Sherif's book is an important contribution to the project management literature With the domination of the service economy in recent years the book addresses the unique features of telecommunication services a critical pillar of the service sector Development projects in telecommunications require combining good knowledge of the fundamentals of project management with clear understanding of the complexities arising from fast changing technology deregulations standards accountability and supply chain management difficulties This book addresses the much needed integrative approach very well Tarek Khalil President International Association for Management of Technology IAMOT While there has been much written about project management the vast majority of the literature focuses on industrial design and production In Managing Projects in Telecommunication Services Mostafa Hashem Sherif effectively demonstrates the unique requirements of projects in telecommunication services and consequently the benefits of an integrated approach to project management that is specifically tailored to the telecommunications industry Managing Projects in Telecommunication Services draws from a wide range of disciplines including organizational management motivation quality control and software engineering All the theory

and practical guidance that an effective telecommunications project manager needs is provided. The text is divided into three main parts. Chapters 1 through 3 set forth the special characteristics of telecommunications projects including technology life cycle type of innovation and project organization. Chapters 4 through 10 cover the areas that the Project Management Institute has standardized in its publication A Guide to the Project Management Body of Knowledge PMBOK Guide focusing on the issues specific to telecommunications. Chapters address scope, schedule and cost information and communication, human resources, quality, vendor management and risk. Chapters 11 and 12 integrate and summarize all of the concepts for the planning and delivery of a project. Chapters are loaded with examples and case studies many from the author's personal experience that demonstrate the benefits of good project management and the consequences of poor project management. Each chapter includes a summary of key points. References are also provided to facilitate further research and study. For project managers as well as students in telecommunications, this text is unsurpassed. It not only covers the theory and practice of effective project management, it also tailors its discussion specifically to the unique needs of the telecommunications industry. PMBOK is a registered mark of the Project Management Institute Inc.

Management of Multimedia Networks and Services Alan Marshall, Nazim Agoulmine, 2003-09-09 Welcome to MMNS 2003. Multimedia services over IP networks are proliferating at an enormous speed. There is also increasing demand for solutions that provide assured levels of service quality. All of these require novel paradigms, models and architectures for realizing integrated end-to-end service management rather than managing network elements in isolation. Providing scalable Quality of Service (QoS) while maintaining fairness along with secure and optimal network resource management are key challenges for the future Internet. These challenges apply to both wired and wireless networks. This book contains all of the papers presented at the 6th IFIP IEEE International Conference on Management of Multimedia Networks and Services MMNS 2003 hosted by The Queen's University of Belfast Northern Ireland September 7-10 2003. MMNS 2003 follows the successful conferences held in Santa Barbara 2002, Chicago 2001, Fortaleza Brazil 2000, Paris 1998 and Montreal 1997. MMNS uses single track presentations which provide an intimate setting for discussion and debate. The conference is known for its high quality papers from various research communities. In just six years MMNS has established itself as one of the premier conferences focusing on the management of multimedia networks and services. The conference objective is to bring together researchers working in all facets of network and service management as applied to broadband networks and multimedia services.
