

### Problem 3.2

Fill in the table.

| This is what we write | This is what we mean | Sign of First Number | Sign of Second Number | Operation | Result |
|-----------------------|----------------------|----------------------|-----------------------|-----------|--------|
| $8 + 4$               |                      |                      |                       |           |        |
| $-3 + 8$              |                      |                      |                       |           |        |
| $7 + (-4)$            |                      |                      |                       |           |        |
| $-3 + (-8)$           |                      |                      |                       |           |        |
| $2 - 7$               |                      |                      |                       |           |        |
| $-2 - 6$              |                      |                      |                       |           |        |
| $1 - (-8)$            |                      |                      |                       |           |        |
| $-8 - (-2)$           |                      |                      |                       |           |        |

Almost certainly, the last four rows were the most problematic to determine the result. This is because subtraction combined with signed numbers offers an opportunity to showcase confused ideas, partially recalled rules and wrong calculations all at once. We will show you how to think differently about subtraction soon, but first we will look more closely at addition.

### Addition of Two Signed Numbers

There are many ways to think about addition, and ideally you have many, flexible ways of understanding addition. In the problems below, we will use the concept of addition as combining quantities and finding the total.

For these problems, we can imagine a positive number represents money in our pocket (or bank account), and a negative number represents money we owe someone (a debt or a bill). The first number in the addition represents how much money we have at the beginning. The second number can represent what we are combining—it may be more money (a positive number) or a new debt. Let's see how this can help us think about addition of signed numbers.

### Problem 3.3

$$3 + 2$$

We have already seen that this really means

$$(+3) + (+2)$$

The scenario we can imagine goes as follows:

- 1) I have 3 dollars in my pocket.
- 2) I then earn 2 dollars more.
- 3) Altogether, I have 5 dollars in my pocket.

This leads us to the answer,

$$3 + 2 = 5$$

### Problem 3.4

$$-5 + 8$$

This means

$$(-5) + (+8)$$

Here the scenario changes:

- 1) I start out in debt 5 dollars.
- 2) I then earn 8 dollars.
- 3) After paying my 5 dollar debt with my 8 dollars, I have 3 dollars in my pocket.

The answer is

$$-5 + 8 = 3$$
