The Dilemma between Quality Reputation and Risk Prevention: Warranty Provisions of Car Manufacturers

Daniel Siebert, 2014-06-27 Car manufacturers are playing a major role beneath the most promising industries for investors. But the changing environment of political decisions and moving values of customers influence the strategies of the OEMs. The quality strategy of the car brand plays an enormous role. The increasing trend of major recall initiatives of vehicles is part of the daily press and harms the quality reputation of the car makers. But how can the analyst give a statement about the quality performance with the public information provided by the OEMs? One possibility is the evaluation of the provision for warranty, which is part of the liabilities in the annual report. This book compares the applicable requirements like laws and reporting standards which have to be followed. It shows calculation methods to make the impact of laws and reporting standards visible. In respect to the estimation of the failure probability, statistic methods are explained. Finally, the annual reports of the biggest car manufacturers are compared with each other in regards to the available information about warranty provisions and key figures are analyzed.

Testing iOS Apps with HadoopUnit Scott Tilley,Krissada Dechokul,2022-05-31 Smartphone users have come to expect high quality apps This has increased the importance of software testing in mobile software development Unfortunately testing apps particularly the GUI can be very time consuming Exercising every user interface element and verifying transitions between different views of the app under test quickly becomes problematic For example execution of iOS GUI test suites using Apple s UI Automation framework can take an hour or more if the app s interface is complicated The longer it takes to run a test the less frequently the test can be run which in turn reduces software quality This book describes how to accelerate the testing process for iOS apps using HadoopUnit a distributed test execution environment that leverages the parallelism inherent in the Hadoop platform HadoopUnit was previously used to run unit and system tests in the cloud It has been modified to perform GUI testing of iOS apps on a small scale cluster a modest computing infrastructure available to almost every developer Experimental results have shown that distributed test execution with HadoopUnit can significantly outperform the test execution on a single machine even if the size of the cluster used for the execution is as small as two nodes This means that the approach described in this book could be adopted without a huge investment in IT resources HadoopUnit is a cost effective solution for reducing lengthy test execution times of system level GUI testing of iOS apps
