Kaushika, K.S. Reddy, Kshitij Kaushik, 2016-05-02 This book emerges from the recognition that energy environment and ecosystems are dynamically and inextricably connected The energy environment system must be addressed in its totality so that we can devise sustainable solutions that incorporate both economic growth and environmental conservation No single clean energy source will sustain long term energy security and fossil fuels will remain prominent in the mix of energy sources for several decades to come Energy solutions therefore must employ a broad and diverse range of approaches including cleaner fossil fuel technologies and an affordable transition to greener power generation employing waste water and renewable resources Moreover adapting to this changing global

energy picture will require a transformational shift in the ways we use and deliver energy services The authors begin with a broad introductory chapter on sustainable energy and the environment classifying energy resources cataloging environmental degradations and outlining the concepts and practices of sustainability In Chapters Two and Three they summarize the basic constituents of the environment the biosphere and its natural cycles and offer a model of Earth's planetary temperatures and the greenhouse effect Chapters Four and Five outline conventional energy and power systems and related environmental degradations The next several chapters cover clean coal technologies for power generation and discuss sustainable energy and power technologies based on both thermal and photovoltaic solar energy along with biomass and wind The final chapters examine in depth the management of waste and water pollution control and energy conservation The book introduces a unique approach to sustainability and energy conservation which emphasizes the relationships between underlying scientific principles and practical applications employed in engineering solutions All this is offered in a form that matches the requirements of college level environmental science and engineering courses

**Immunology at the
feto-maternal interface** Mahmood Jeddi-Tehrani, Amir-Hassan Zarnani, Maria Laura Zenclussen, Marie-Pierre Piccinni, 2025-09-19 Reproductive biology is the mother of other areas in biology as Reproduction had been the main strategy of simple and higher organisms to evolve The utmost fitness in evolutionary tree is biological fitness in being beneficial for successful reproduction In this connection reproductive sciences have been the focus of many research programs Specifically reproductive immunology has received the attention of researchers more than ever This trend is largely due to the industrialization of societies the increase in the age of marriage and as a result the decrease in fertility rates On the other hand despite significant advances in the field of artificial reproductive technologies low success rate of embryo transfer is the main limiting factor for in vitro fertilization treatment Therefore understanding the immunological mechanisms of implantation and the adaptation of the immune cells of the pregnancy site which leads to the maternal immunological tolerance to fetal antigens is of utmost importance Immunological alterations of the female reproductive tract commences from the first exposure to seminal plasma leading to molecular and cellular changes that increase the chance of conception and pregnancy through modulation of inflammatory responses and induction of paternal antigen specific regulatory T cells Steroid hormone directed decidualization of endometrium is the first step for embryo implantation and placental development which eventually leads to immunoregulation of the immune cells residing in the endometrium in favor of pregnancy Following placental development an extensive crosstalk begins among developing trophoblasts decidualized endometrial stromal cells and the decidual immune cells and establishes a unique triangle for induction of maternal immune tolerance All the processes of entire pregnancy are under the tight control of inflammation regulatory mechanisms While acute inflammation is a triggering mechanism of embryo implantation and parturition cell senescence associated with chronic inflammation in pregnancy related disorders such endometriosis chronic endometritis and hydrosalpinx is destructive

and can lead to infertility or abortion **Relevance of Duties in the Contemporary World** Raman Mittal, Kshitij Kumar Singh, 2023-01-01 This book reflects on the significance of duties in creating an egalitarian society by collating and contextualizing the relevant literature. It particularly focuses on an appreciation of Gandhi's views on duty to showcase how they remain pertinent to create a cohesive responsible and value based society in the present right dominated world. A viable solution to the current real world problems could be found in exploring the philosophy on duties and the book provides relevant literature in this regard. It undertakes jurisprudential analysis of duty in a rights dominated world identifying the gaps in realising the potential of duty to address the critical issues of the present times. It argues that enforcement of rights depends heavily on the observance of duties and proposes coherence in right duty relationship. Gandhian thought on duty recognises duty as a precursor to rights and emphasises that the observance of duties guarantees the enforcement of rights. The relevance of duties and Gandhian thoughts on the same is not restricted to India but transcends borders with profound appeal. Gandhian thoughts have become even more relevant in the current times to examine the situation of COVID 19 pandemic, racial discrimination, BLM, environmental crises, digital divide, health care and medical care crises, refugee and migrant labour problems and it can offer promising solutions based on the nuances of social solidarity, self-realisation of duties, responsibilities, local governance, compassion and humanity.
