Olaf Booy,Max Wade,Helen Roy,2015-04-23 This field guide will enable the identification of a range of invasive plants and animals now found in Britain The impact of invasive organisms is second only to habitat loss as a threat to biodiversity and yet despite increasing ecological awareness people remain largely unaware of these plants and animals and their potentially devastating impact Although most biological introductions fail many prove successful and these can prove disastrous for native fauna and flora Though these species are of particular concern to conservationists there has previously been no unified guide devoted to their recognition This book will act both as an ID guide appealing to the amateur naturalist and as an important tool for ecologists and land managers attempting to tackle the problem posed by invasive species

**International Introductions of Inland Aquatic Species** R. L. Welcomme, 1988-01-01 A total of 1 354 introductions of 237 species into 140 countries are analysed The number of introductions carried out rose from the middle of the last century until the 1960s and have lessened since

then Invasive Aquatic Species of Europe. Distribution, Impacts and Management Erkki Leppäkoski, Stephan Gollasch, Sergej Olenin, 2013-06-29 The global scale of alien species invasions is becoming more and more evident in the beginning of the new millennium. Though the problem of biological invasions became a rapidly growing research area, there are large gaps still both geographically and thematically to be filled in the near future. This book is the first attempt to provide an overall picture of aquatic species invasions in Europe. Its geographical scope stretches from Irish waters in the west to Volga River and the Caspian Sea in the east and from Mediterranean in the south up to the Arctic coast of Europe. Not all parts of the continent could be equally covered as in some countries species invasions are not studied yet. The book tends to represent the array of all major European aquatic systems on the broadest geographical and ecological scope possible from fully saline seas, semi-enclosed brackish water bodies and coastal lagoons to freshwater lakes, major river systems and waterways. The key objectives include the present status and impacts caused by non-native aquatic species in European waters. Please note that lengthy species lists submitted for publication and additional information were put on the Internet as the electronic version of these tables benefits from computer-assisted search for data: <http://www.ku.lt/nemoEuroAquaInvaders.htm>. Altogether more than 100 scientists from 24 countries have joined to synthesize the available information on bioinvasions. However, the book does not claim to be fully comprehensive.
