**Comparative Reproductive Biology** Heide Schatten, Gheorghe M. Constantinescu, 2008-06-02 When considering the physiological systems of the body the degree of species variation within the reproductive system compared to other systems is remarkable Furthermore it is essential that researchers educators and

students alike remain aware of the fundamental comparative differences in the reproductive biology of domestic species. Written by renowned scientists in their respective fields, *Comparative Reproductive Biology* is a comprehensive reference on the reproductive systems of domestic species. The book offers both broad and specific knowledge in areas that have advanced the field in recent years, including advances in cell and molecular biology applied to reproduction, transgenic animal production, gender selection, artificial insemination, embryo transfer, cryobiology, animal cloning, and many others. This seminal text includes topics in animal reproduction that are usually only found as part of other books in animal science, such as anatomy, histology, physiology, radiology, ultrasonography, and others. Comprehensive reference of the reproductive systems of domestic species. Written by a team of top researchers. Richly illustrated throughout, including 12 pages of color images.

*Anatomy and Physiology of Domestic Animals* R. Michael Akers, D. Michael Denbow, 2013-03-25. Anatomy and physiology are key foundational areas of study for animal science students and professionals. Understanding these guiding principles will provide students with a better understanding of complex make-up of domestic animals and continued success in further study in this field. *Anatomy and Physiology of Domestic Animals* provides a thorough systems-based introduction to anatomy and physiology of a wide range of domestic animal species. Each chapter is highly illustrated to provide useful examples of concepts discussed. *Animal Models and Human Reproduction* Heide Schatten, Gheorghe M. Constantinescu, 2017-01-13. Our knowledge of reproductive biology has increased enormously in recent years on cellular, molecular, and genetic levels, leading to significant breakthroughs that have directly benefitted in vitro fertilization (IVF) and other assisted reproductive technologies (ART) in humans and animal systems. *Animal Models and Human Reproduction* presents a comprehensive reference that reflects the latest scientific research being done in human reproductive biology, utilizing domestic animal models. Chapters on canine, equine, cow, pig, frog, and mouse models of reproduction reflect frontier research in placental biology, ovarian function and fertility, non-coding RNAs in gametogenesis, oocyte and embryo metabolism, fertilization, cryopreservation, signal transduction pathways, chromatin dynamics, epigenetics, reproductive aging, and inflammation. Chapters on non-human primate models also highlight recent advancements into such issues as human in vitro fertilization, IVF, and assisted reproductive technologies (ART). This book offers animal scientists, reproductive biology scientists, clinicians, and practitioners invaluable insights into a wide range of issues at the forefront of human reproductive health.

**Veterinary Anatomy of Domestic Mammals** Horst Erich König, Hermann Bragulla, 2007. A revised third edition of this bestselling textbook. It contains a unique blend of text, colour photographs, imaging, and diagrams describing the gross systematic and topographical anatomy of domestic mammals. Throughout the book, the authors focus on anatomical relationships to clinical conditions and where appropriate to microscopic anatomy, histology, embryology, and physiology. Greatest emphasis is given to dog and cat, and horse, with relevant information on ox, cow, pig, sheep, goat, and rabbit. The book combines meticulous science and superb illustrations and will be a life-long source of reference for veterinary students.
