Sewage and Biomass from Wastewater to Energy Inamuddin, Tariq Altalhi, Mohammad Luqman, Joseph K. Bwapwa, 2024-06-21 Written and edited by a team of industry experts this exciting new volume covers clean energy production from sewage and biomass while achieving a zero waste strategy Wastewater treatment plants are critical in protecting both the environment s resources and human health A wastewater treatment plant s technological system focuses not only on the effectiveness of the treatment but on the costs and energy consumption of the entire system Municipal wastewater treatment produces a significant amount of sewage sludge all over the world The majority of this sludge s dry matter content is made up of organic compounds which are not toxic and they consist of both primary and secondary microbiological sludge There is also a substantial quantity of inorganic substances in the sludge along with a small quantity of toxic matter Also various raw sewage treatment options can include energy production heat electricity or biofuel to reduce dependence on external energy supply during treatment The most important options used for energy production

from sewage and biomass can use the following approaches anaerobic digestion co digestion incineration with energy recovery co incineration pyrolysis gasification supercritical wet oxidation and hydrolysis Generally these processes or methods are cost effective but they can still have some setbacks related to the nature of the methods or the raw material used for conversion There are also operating conditions to comply with to get a successful outcome This book combines information from many disciplines related to wastewater treatment technologies to show how the circular economy approach can be used to achieve zero waste and produce energy that can be useful for plants and communities This approach focuses on clean technologies for green energy resources such as biohydrogen biofuels and biogas from biomass and sewage sludge for zero waste production This is aimed to also integrate the issue of energy demand and the one of energy production

Environmental Sustainability P. Thangavel,G. Sridevi,2014-11-06 Covers different categories of green technologies e g biofuels renewable energy sources phytoremediation etc in a nutshell Focuses on next generation technologies which will help to attain the sustainable development The chapters widely cover for students faculties and researchers in the scientific arena of Environmentalists Agriculturalists Engineers and Policy Makers The World Environment Day 2012 is prepared to embrace green economy The theme for 2012 encompasses various aspects of human living ranging from transport to energy to food to sustainable livelihood Green technology an eco friendly clean technology contributes to sustainable development to conserve the natural resources and environment which will meet the demands of the present and future generations The proposed book mainly focuses on renewable energy sources organic farming practices phyto bioremediation of contaminants biofuels green buildings and green chemistry All of these eco friendly technologies will help to reduce the amount of waste and pollution and enhance the nation s economic growth in a sustainable manner This book is aimed to provide an integrated approach to sustainable environment and it will be of interest not only to environmentalists but also to agriculturists soil scientists and bridge the gap between the scientists and policy makers *Selected Water Resources Abstracts* ,1991-03

Plants, Pollutants and Remediation Münir Öztürk,Muhammad Ashraf,Ahmet Aksoy,M. S. A. Ahmad,Khalid Rehman Hakeem,2016-01-12 In the era of current industrial and civil development everyone is expressing a deep concern about the problem of environmental pollution The majority of the global community has a vested interest in supporting and sustaining any move for the protection of environment In the greater part of the last century it was the fast pace of industrialization galloping demand for energy and reckless exploitation of natural resources that were mainly responsible for creating the problem of environmental pollution In the current scenario high illiteracy rates of the developing nations leads to increasing environmental pollution When it comes to the hazards of environmental pollution there is only a very thin dividing line between different countries One pollutes and the other suffers there are no eventual winners without significant changes globally Pollution is posing serious threats to all kinds of diversities on earth in particular plants The plant world is of vital importance for our planet It is a worldwide priority aimed

at better meeting the needs for food livelihoods and nature To meet the food demand of fast growing population global food production will have to be doubled The sustainability of food production depends on the sustainability of plant resources and using tolerant varieties to augment food production This volume therefore covers discussions on the recent developments in this connection and the emerging role of plants as indicators remediation and such related issues as biodiversity conservation and the effects of on edible plants It reviews issues concerning the future of plant life Taking cognizance of this several experts from different parts of the globe have contributed from their experience and knowledge to the critical issues of Environmental Pollution and the Role of Plants in this connection
