Guanylate Cyclase Developments In Molecular And Cellular Biochemistry:

Guanylate Cyclase ,2002 *Guanylate Cyclase* Rameshwar K. Sharma,2012-12-06 From somewhat enigmatic beginnings 40 years ago guanylate cyclase research has emerged to occupy a position of prominence in the study of signal transduction Guanylate cyclase has several intriguing features including existence in two major forms membrane and soluble each independently regulated by distinct mechanisms The membrane form gives rise to a fascinating signal transduction story important to both peptide hormones and sensory neurons This volume covers the evolution of the field peptide hormone receptor work membrane guanylate cycles related retinal diseases and the biochemistry and physiology of the soluble form The 16 chapters are written by leaders in the field **Lipid Binding Proteins within Molecular and Cellular**

Biochemistry D.A. Bernlohr,L. Banaszak,2012-12-06 The breadth of modern biology is characterized by a comprehension of phenomena at many levels of organization Such levels of understanding range from the organismal to the molecular It is when all these levels can be discussed together that a sense of true achievement begins to be felt The topical area of fatty acid transport and metabolism was the focus of the Third International Conference on Lipid Binding Proteins held at the University of Minnesota in May 1997 This volume contains a sampling of the proceedings of this meeting *Guanidino Compounds in Biology and Medicine* Joseph F. Clark,2012-12-06 Guanidino compounds comprise Creatine Arginine and the Guanidines In the past two years there have been over 2000 published articles with the names of these compounds in the title One can go to any nutrition or health food store and buy these as supplements because it is believed they improve health and athletic performance This volume includes an up to date summary of the scientific and clinical aspects of essentially all the biologically active Guanidino Compounds The articles summarize the current scientific knowledge of these compounds with reference to relevant clinical conditions and discuss the chemical biological and clinical functions of these compounds

Ca²⁺ and Ca²⁺-interlocked Membrane Guanylate Cyclase Modulation of Neuronal and Cardiovascular Signal Transduction Rameshwar K Sharma,Wolfgang Baehr,Clint L Makino, Teresa Duda,2015-05-01 The tale of cyclic GMP has been astonishing Having overcome an initial disbelief cyclic GMP has risen to its present eminence as a premium cellular signal transduction messenger of not only hormonal extracellular but also of the intracellular signals This research topic focuses on the pathways and functions of membrane guanylate cyclases in different tissues of the body and their interplay with intracellular sensory signals where in many cases cyclic GMP along with Ca²⁺ have taken on roles as synarchic co messengers Oxygen/Nitrogen Radicals: Cell Injury and Disease Val Vallyathan,Vince Castranova,Xianglin Shi,2002-07-31 A veritable mountain of literature has been published showing the causal relationship of reactive oxygen nitrogen species in human disease conditions and there has been an explosion in the understanding of oxidative stress the protective role of antioxidants and molecular events involved in the regulation of transcription editing and translation of key events leading to disease processes Strategies need to be developed for prevention of diseases by allowing scientists and clinicians to obtain

information on new and emerging advances The molecular mechanisms involved in several diseases including Alzheimer s disease atherosclerosis diabetes arthritis and Parkinson s disease as well as disorders of the eye skin cardiac and pulmonary systems are discussed in this volume along with scientific evidence supporting the value of dietary supplementation with antioxidants in the prevention of cellular damage leading to chronic disease Special in vivo techniques are also discussed at length along with the role of molecular studies in human risk assessment Multi-limbed membrane guanylate cyclase cellular signaling pathways Rameshwar K. Sharma,Teresa Duda,Clint L. Makino,Kailash N. Pandey,2023-05-03

Karl-Wilhelm Koch, José R. Naranjo, Beat Schwaller, Daniele Dell'Orco, Michael R. Kreutz, 2020-01-16 **The Neuronal Functions of EF-hand Ca(2+)-binding Proteins 2nd Edition** Michael R. Kreutz, José R. Naranjo, Karl-Wilhelm Koch, Beat Schwaller, 2016-11-01

Ca²⁺ signaling in neurons is characterized by highly restricted and dynamic gradients called Ca²⁺ waves, spikes, transients and puffs depending upon their corresponding spatial and temporal features. Based on this strict segmentation, the Ca²⁺ ion provides a versatile basis for complex signaling in neuronal subcompartments with a spatial resolution of micro and nanodomains. The multitude of Ca²⁺ regulated processes requires specialized downstream processing machinery translating the Ca²⁺ signal into alterations of cellular processes. The broad range of different Ca²⁺ triggered phenomena in neurons ranging from neurotransmission to gene expression is reflected by the existence of a multitude of different Ca²⁺ binding proteins (CaBPs) from which numerous belong to the EF-hand superfamily. EF-hand proteins can be subdivided into Ca²⁺ buffer and Ca²⁺ sensor proteins. Whereas the first group has a very high affinity for Ca²⁺, exhibits little conformational change in the Ca²⁺ bound state and is thought to mainly chelate Ca²⁺, the second group has a lower affinity for Ca²⁺ and shows considerable conformational changes upon Ca²⁺ binding which usually triggers a target interaction. Neuronal calcium sensor (NCS) proteins and the related Caldendrin, CaBP, Calneuron, nCaBPs proteins are members of this latter group. They resemble the structure of their common ancestor Calmodulin (CaM) with four EF-hand Ca²⁺ binding motifs of which not all are functional. However, despite their structural homology with CaM, NCS as well as nCaBPs are quite diverse in amino acid sequence. It is therefore surprising that relatively few binding partners have been identified that are not CaM targets and this raises the question of the specificity and function of these interactions. In terms of function, binding of NCS and nCaBP has frequently different consequences than binding of CaM which substantially increases the versatility of the Ca²⁺ tool kit. The general idea of this special issue is to provide an overview on the function of neuronal EF-hand calcium binding proteins in health and disease. But we will not just provide a mere collection of articles to stress the function of each protein. The issue will mainly deal with emerging concepts on Ca²⁺ signaling buffering mediated by EF-hand Ca²⁺ binding proteins. This includes questions like features that define the functional role of a EF-hand calcium sensor in neurons, the conditions that make physiological relevance of a given interaction of a CaBP with its target plausible, the emerging synaptic role of these proteins and mounting evidence for their role in the regulation of protein trafficking. Structural aspects and biophysical studies will be covered. Another aspect will be the role of CaBPs in brain disease states. This aspect includes studies showing that CaBPs are targets of drugs in clinical use, studies showing that expression levels of calcium binding proteins are

frequently altered in brain disease states as well as reports on mutations in EF hand calcium sensors linked to human disease
