Biomedical Informatics Andreas Holzinger, 2014-05-06 This book provides a broad overview of the topic Bioinformatics with focus on data information and knowledge From data acquisition and storage to visualization ranging through privacy regulatory and other practical and theoretical topics the author touches several fundamental aspects of the innovative interface between Medical and Technology domains that is Biomedical Informatics Each chapter starts by providing a useful inventory of definitions and commonly used acronyms for each topic and throughout the text the reader finds several real world examples methodologies and ideas that complement the technical and theoretical background This new edition includes new sections at the end of each chapter called future outlook and research avenues providing pointers to future challenges At the beginning of each chapter a new section called key problems has been added where the author discusses possible traps and unsolvable or major problems

Interactive Multi-modal Question-Answering Antal van den Bosch, Gosse Bouma, 2011-05-10 This book is the result of a group of researchers from different disciplines asking themselves one question what does it take to develop a computer interface that listens talks and can answer questions in a domain First obviously it takes specialized modules for speech recognition and synthesis human interaction management dialogue input fusion and multimodal output fusion basic question understanding and answer finding While all modules are researched as independent subfields this book describes the development of state of the art modules and their integration into a single working application capable of answering medical encyclopedic questions such as How long is a person with measles contagious or How can I prevent RSI The contributions in this book which grew out of the IMIX project funded by the Netherlands Organisation for Scientific Research document the development of this system but also address more general issues in natural language processing such as the development of multidimensional dialogue systems the acquisition of taxonomic knowledge from text answer fusion sequence processing for domain specific entity recognition and syntactic parsing for question answering Together they offer an

overview of the most important findings and lessons learned in the scope of the IMIX project making the book of interest to both academic and commercial developers of human machine interaction systems in Dutch or any other language Highlights include integrating multi modal input fusion in dialogue management Van Schooten and Op den Akker state of the art approaches to the extraction of term variants Van der Plas Tiedemann and Fahmi Tjong Kim Sang Hofmann and De Rijke and multi modal answer fusion two chapters by Van Hooijdonk Bosma Krahmer Maes Theune and Marsi Watch the IMIX movie at www.nwo.nl/imix/film Like IBM s Watson the IMIX system described in the book gives naturally phrased responses to naturally posed questions Where Watson can only generate synthetic speech the IMIX system also recognizes speech On the other hand Watson is able to win a television quiz while the IMIX system is domain specific answering only to medical questions The Netherlands has always been one of the leaders in the general field of Human Language Technology and IMIX is no exception It was a very ambitious program with a remarkably successful performance leading to interesting results The teams covered a remarkable amount of territory in the general sphere of multimodal question answering and information delivery question answering information extraction and component technologies Eduard Hovy USC USA Jon Oberlander University of Edinburgh Scotland and Norbert Reithinger DFKI Germany
