**Group Cognition** Gerry Stahl, 2006 Exploring the software design social practices and collaboration theory that would be needed to support group cognition collective knowledge that is constructed by small groups online Innovative uses of global and local networks of linked computers make new ways of collaborative working learning and acting possible In Group Cognition Gerry Stahl explores the technological and social reconfigurations that are needed to achieve computer supported collaborative knowledge building group cognition that transcends the limits of individual cognition Computers can provide active media for social group cognition where ideas grow through the interactions within groups of people software functionality can manage group discourse that results in shared understandings new meanings and collaborative learning Stahl offers software design prototypes analyzes empirical instances of collaboration and elaborates a theory of collaboration that takes the group rather than the individual as the unit of analysis Stahl s design studies concentrate on mechanisms to support group formation multiple interpretive perspectives and the negotiation of group knowledge in applications as varied as collaborative curriculum development by teachers writing summaries by students and designing space voyages by NASA engineers His empirical analysis shows how in small group collaborations the group constructs intersubjective knowledge that emerges from and appears in the discourse itself This discovery of group meaning becomes the springboard for Stahl s outline of a social theory of collaborative knowing Stahl also discusses such related issues as the distinction between meaning making at the group level and interpretation at the individual level appropriate research methodology philosophical directions for group cognition theory and suggestions for further empirical work

**Appropriating Technology** Pierre Tchounikine, 2025-10-28 How we use digital technologies and make them our own Appropriation is the process by which we turn digital technologies into instruments for our own use Since we do not use technologies but rather our appropriations of them understanding why and how these appropriations develop is important and useful for both users and for designers However appropriation is an underexplored aspect of human computer interaction In Appropriating Technology

Pierre Tchounikine explains that appropriation is constitutive of how we actually use things in practice and is different in nature from the initial process of learning to use a technology. He provides an analysis of the phenomena at play and explains how the way we develop, we evolve, we learn is key. How our human high level needs also play an important though often unconscious role. How the current adaptation means offered by most technologies give us some degree of freedom to align technologies to our needs and desires although they are far from fully satisfactory and how these design aspects may be improved.

**Technology Choices** Diane E. Bailey, Paul M. Leonardi, 2015-01-23. An analysis of the occupational factors that shape the technology choices made by people who perform the same type of work. Why do people who perform largely the same type of work make different technology choices in the workplace? An automotive design engineer working in India for example finds advanced information and communication technologies essential allowing him to work with far flung colleagues. A structural engineer in California relies more on paper based technologies for her everyday work and a software engineer in Silicon Valley operates on multiple digital levels simultaneously all day continuing after hours on a company supplied home computer and network connection. In *Technology Choices* Diane Bailey and Paul Leonardi argue that occupational factors rather than personal preference or purely technological concerns strongly shape workers technology choices. Drawing on extensive field work a decade's worth of observations and interviews in seven engineering firms in eight countries Bailey and Leonardi challenge the traditional views of technology choices technological determinism and social constructivism. Their innovative occupational perspective allows them to explore how external forces shape ideas beliefs and norms in ways that steer individuals to particular technology choices albeit in somewhat predictable and generalizable ways. They examine three relationships at the heart of technology choices: human to technology, technology to technology and human to human. An occupational perspective they argue helps us not only to understand past technology choices but also to predict future ones.

**Learning In a Networked Society** Yael Kali, Ayelet Baram-Tsabari, Amit M. Schejter, 2019-04-26. One of the most significant developments in contemporary education is the view that knowing and understanding are anchored in cultural practices within communities. This shift coincides with technological advancements that have reoriented end user computer interaction from individual work to communication participation and collaboration. However while daily interactions are increasingly engulfed in mobile and networked Information and Communication Technologies (ICT) in school learning interactions are in comparison technologically impoverished creating the phenomenon known as the school society digital disconnect. This volume argues that the theoretical and practical tools of scientists in both the social and educational sciences must be brought together in order to examine what types of interaction, knowledge construction, social organization and power structures occur spontaneously in technology enhanced learning (TEL) communities or can be created by design of TEL. This volume seeks to equip scholars and researchers within the fields of education, educational psychology, science, communication, social welfare, information sciences and instructional design as well as practitioners and policy makers with

empirical and theoretical insights and evidence based support for decisions providing learners and citizens with 21st century skills and knowledge and supporting well being in today s information based networked society

**Virtually Amish** Lindsay Ems,2022-06-07 How the Amish have adopted certain digital tools in ways that allow them to work and live according to their own value system The Amish are famous for their disconnection from the modern world and all its devices But as Lindsay Ems shows in Virtually Amish Old Order Amish today are selectively engaging with digital technology The Amish need digital tools to participate in the economy websites for ecommerce for example and cell phones for communication on the road but they have developed strategies for making limited use of these tools while still living and working according to the values of their community The way they do this Ems suggests holds lessons for all of us about resisting the negative forces of what has been called high tech capitalism Ems shows how the Amish do not allow technology to drive their behavior instead they actively configure their sociotechnical world to align with their values and protect their community s autonomy Drawing on extensive ethnographic fieldwork conducted in two Old Order Amish settlements in Indiana Ems explores explicit rules and implicit norms as innovations for resisting negative impacts of digital technology She describes the ingenious contraptions the Amish devise including the black box phone a landline phone attached to a device that connects to a cellular network when plugged into a car s cigarette lighter and considers the value of human centered approaches to communication Non Amish technology users would do well to take note of Amish methods of adopting digital technologies in ways that empower people and acknowledge their shared humanity

**Coding Places** Yuri Takhteyev,2012-09-21 An examination of software practice in Brazil that reveals both the globalization and the localization of software development Software development would seem to be a quintessential example of today s Internet enabled knowledge work a global profession not bound by the constraints of geography In Coding Places Yuri Takhteyev looks at the work of software developers who inhabit two contexts a geographical area in this case greater Rio de Janeiro and a world of practice a global system of activities linked by shared meanings and joint practice The work of the Brazilian developers Takhteyev discovers reveals a paradox of the world of software it is both diffuse and sharply centralized The world of software revolves around a handful of places in particular the San Francisco Bay area that exercise substantial control over both the material and cultural elements of software production Takhteyev shows how in this context Brazilian software developers work to find their place in the world of software and to bring its benefits to their city Takhteyev s study closely examines Lua an open source programming language developed in Rio but used in such internationally popular products as World of Warcraft and Angry Birds He shows that Lua had to be separated from its local origins on the periphery in order to achieve success abroad The developers Portuguese speakers used English in much of their work on Lua By bringing to light the work that peripheral practitioners must do to give software its seeming universality Takhteyev offers a revealing perspective on the not so flat world of globalization

*Venture Labor* Gina Neff,2012-04-06 Why employees of pioneering Internet companies chose to invest their time energy hopes and human capital in start up ventures In the dot com boom of the late 1990s employees of Internet startups took risks left well paying jobs for the chance of striking it rich through stock options only to end up unemployed a year later relocated to areas that were epicenters of a booming industry that shortly went bust chose the opportunity to be creative over the stability of a set schedule In *Venture Labor* Gina Neff investigates choices like these made by high tech workers in New York City s Silicon Alley in the 1990s Why did these workers exhibit entrepreneurial behavior in their jobs investing time energy and other personal resources that Neff terms venture labor when they themselves were employees and not entrepreneurs Neff argues that this behavior was part of a broader shift in society in which economic risk shifted away from collective responsibility toward individual responsibility In the new economy risk and reward took the place of job loyalty and the dot com boom helped glorify risks Company flexibility was gained at the expense of employee security Through extensive interviews Neff finds not the triumph of the entrepreneurial spirit but a mixture of motivations and strategies informed variously by bravado na vet and cold calculation She connects these individual choices with larger social and economic structures making it clear that understanding venture labor is of paramount importance for encouraging innovation and even more important for creating sustainable work environments that support workers

**Triangles and Tribulations** Clay Spinuzzi,2025-06-17 How the sociology of translation can help us understand a social science framework cultural historical activity theory CHAT as a set of uneasy settlements that both further and betray their original intentions How do social science frameworks get taken up and spread In *Triangles and Tribulations* Clay Spinuzzi

uses the sociology of translation to reread the history of one such framework cultural historical activity theory CHAT CHAT originated in the 1920s and 1930s work of Soviet psychologists in the Vygotsky Circle with its key insight mediation depicted in a simple triangular diagram drawn by Lev Vygotsky From there CHAT was developed and popularized by international scholars including Finnish researcher Yrjö Engeström who used Vygotsky's triangle as a basis for his own Through this progressive development CHAT carried on the work of its forebears building on their foundations or so we are sometimes encouraged to understand these transformations But each such translation Spinuzzi argues is also a betrayal Each innovation opens new possibilities for CHAT but also disrupts a previous settlement Examining specific points in CHAT's history Spinuzzi reviews how CHAT has been applied to different domains in service to different projects and evaluated through different trials undergoing rhetorical transformations These translations sedimented as a series of settlements have allowed it to persist as a social science approach and develop as a framework for workplace studies But they have also involved accumulating concepts and terms from various social sciences yielded radical changes in scope and led to ongoing disputes about what constitutes its units of analysis In examining CHAT's triangles Spinuzzi considers how social science frameworks live through practice and dialogue so that they can continue becoming meaningful to others
