Oncology of the Nervous System Michael D. Walker, 2012-12-06

Where do you begin to look for a recent authoritative article on the diagnosis of management of a particular malignancy

The few general oncology textbooks are generally out of date

Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients

Certain general journals frequently publish good in depth reviews of cancer topics and published symposium lectures are often the best overviews available

Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered

Cancer Treatment and Research is a series of authoritative volumes which aim to meet this need

It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription

We have approached the problem in the following fashion

First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc

Second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis

Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more

Magnetic Resonance Neuroimaging John Kucharczyk, A. James Barkovich, Michael Moseley, 1993-12-21

Magnetic Resonance Neuroimaging is a comprehensive volume that focuses on the newest fields of MRI from functional and metabolic mapping to the latest applications of neuro interventional techniques

Each chapter offers critical discussions regarding available methods and the most recent advances in neuroimaging including such topics as the use of diffusion and perfusion MRI in the early detection of stroke the revolutionary advent of high speed MRI for non invasively mapping cortical responses to

task activation paradigms and the principles and applications of contrast agents The chapters also discuss how these new advances are applied to problems in patients ranging in age from the newborn to the elderly as well as disease states ranging from metabolic encephalopathy to cardiovascular disorders and stroke Magnetic Resonance Neuroimaging will be a valuable text reference for residents research fellows and clinicians in radiology neuroradiology and magnetic resonance imaging
