Cost-effective and Sustainable Road Slope Stabilization and Erosion Control Laura Fay,Michelle Akin,Xianming Shi,National Cooperative Highway Research Program,2012 In the United States it is estimated that 75 percent of all roads are low volume roads maintained by some 35 000 local agencies Low volume roads often omit surface slope protection and this can lead to slope failure erosion and maintenance safety and ecological issues This report presents information on cost effective and sustainable road slope stabilization techniques with a focus on shallow or near surface slope stabilization and

related erosion control methods used on low volume roads To fully address this topic planning and site investigation are discussed as well as erosion control techniques soil bioengineering and biotechnical techniques mechanical stabilization and earthwork techniques Information presented in this report was obtained through an extensive literature review and from survey and interview responses From the survey responses 30 individuals were interviewed based on the information they made available in the survey A total of 25 interviews were conducted over the phone and in two cases written responses were received

Preface Geotechnical Engineering Investigation Handbook Roy E. Hunt, 2005-04-12 The Geotechnical Engineering Investigation Handbook provides the tools necessary for fusing geological characterization and investigation with critical analysis for obtaining engineering design criteria The second edition updates this pioneering reference for the 21st century including developments that have occurred in the twen Engineering Specification Guidelines for Wetland Plant Establishment and Subgrade Preparation Kenneth P.
