Laster,2009-06-16 Teach the Way the Brain Learns discusses organizing learning experiences under themes Once the brain
has stored basic concepts in the curriculum the storing by association system of the brain attaches new information to those
basic concepts building new ones as students have learning experiences that involve them in integrated subject matter
Thematic teaching has been around for quite a while stemming from John Dewey and learning by doing Teachers need to
return to it in view of the effects of narrowed curricula resulting from nationwide emphasis on testing and on rating schools
based on student achievement This book provides ways for teachers to link subjects and areas of learning for various
teaching situations and takes readers from simple correlation through using published thematic units now available and on to
developing their own interdisciplinary themes or in team efforts with other colleagues **Triumph of the Human Spirit**

for all literature explanations are supplemented by special issues in judging books for children Taking readers through the
definitions of literary terms by reviewing plot character theme setting point of view style and tone and including special
sections on censorship and the importance of reading aloud Lukens provides sound criteria for assessing the merit of
children s books The book also includes chapters on rhymes poetry biography and informational books Emphasis is placed on
multicultural literature making it a book intended for use with a wide variety of children s books For anyone interested in
