

# LESSON 10.5

## Similar and Congruent Polygons

**BEFORE**

You classified polygons.

**Now**

You'll use properties of similar and congruent polygons.

**WHY?**

So you can compare two sails, as in Exs. 2–3.

### Word Watch

similar polygons, p. 502  
congruent polygons, p. 502

Two polygons are **similar** if they have the same shape but not necessarily the same size. The symbol  $\sim$  is used to indicate that two polygons are similar. **Congruent polygons** are similar polygons that have the same shape *and* the same size.

| Similar Polygons                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Congruent Polygons                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

### Help with Reading

If two polygons are similar, then the ratio of the lengths of corresponding sides is called the scale factor.

### Watch Out!

When naming congruent or similar polygons, list the letters for the corresponding vertices in the same order. For instance, in Example 1 you cannot write  $\triangle RST \sim \triangle WXYZ$  because  $\angle R$  and  $\angle Y$  are not corresponding angles.

### EXAMPLE 1

#### Finding Measures of Congruent Polygons

Given that  $\triangle RST \cong \triangle XYZ$ , name the corresponding sides and corresponding angles. Then find  $XY$ .

**Corresponding sides:**  $RS$  and  $XY$ ,  $RT$  and  $XZ$ ,  $ST$  and  $YZ$

**Corresponding angles:**  $\angle R$  and  $\angle X$ ,  $\angle S$  and  $\angle Y$ ,  $\angle T$  and  $\angle Z$

Because  $XY$  and  $RS$  are corresponding sides, they are equal in length.

$$XY = RS = 6 \text{ inches}$$
