Vocabulary

water cycle, infiltration, transpiration, evaporation, precipitation, condensation, surface runoff, gradient, discharge, tributary, meander, delta, floodplain, flood, zone of saturation, groundwater, water table, well, artesian well

Multiple Choice

- Which of these processes of the water cycle is a direct effect of the sun's energy?
a. formation of precipitation
b. runoff of water over soil
c. evaporation
d. seeping of water into soil
- Which factor is most important in determining the erosive power of a stream?
a. stream discharge
b. dissolved load
c. stream velocity
d. channel width
- How does water move from plants to the atmosphere?
a. Infiltration
b. Precipitation
c. Transpiration
d. Condensation
- By what process do streams and rivers move material?
a. Weathering
b. Infiltration
c. Mass wasting
d. Erosion
- Which of these features forms at the end of a stream?
a. Sinkholes
b. meanders
c. levees
d. deltas

Understanding Concepts

- Draw a picture that will summarize the major steps in the water cycle.
- How does a stream's gradient affect its velocity? *Velocity increases as gradient increases.*
- What are the main causes of floods? *Rapid spring snowmelt or heavy rain.*
- What is the relationship between a spring (surface water) and the water table? *Springs can form where the water table meets the ground surface.*
- Why are leaking landfills and septic tanks of concern to people who use groundwater? *They can enter the soil and pollute the groundwater.*

Critical Thinking

- Analyzing Concepts:** Why must Earth's water cycle be balanced in order for the system to work? *Would cause floods or drought if not balanced.*
- Relating Cause and Effect:** How would a reduction in friction in a stream channel affect the stream's velocity? *The speed of the water would increase.*
- Applying Concepts:** A stream's discharge decreases. Explain how this affects the stream. *Less water would slow the speed of the stream.*
- Where is the greatest percentage of Earth's fresh water located? *Ice at the poles (2%)*
- Oceans hold about 97 percent of Earth's water. The rest of the water is fresh. What percentage of Earth's water is freshwater that people can use for drinking, cooking, and growing crops? *1 percent*

Concepts in Action

- Applying Concepts:** A person drills a well into an area where there is a known aquifer underground. But the well doesn't produce water. What might be the cause of the problem? What does this person need to know about the water table in this area to solve the problem? *The well is not deep enough, above the water table. The person will need to dig deeper.*
- Predicting:** Erosion reduces the size of pebbles on the bottom of a stream channel. Which of the following would be most affected: the stream's competence, velocity, or discharge? Explain your answer. *Velocity, it would increase from less friction.*

Groundwater Resources Modelling M. G. Shepley, 2012 The UK is a country with over 150 years of widespread exploitation of its principal aquifers for public water supply Increasing demands greater awareness of environmental pressures and more exacting legislation has heightened the need for quantitative models to predict the impacts of groundwater use In the UK this has culminated in a unique national regulator led programme for England and Wales to develop conceptual and numerical models of the principal bedrock aquifers The outcomes of this programme will be of interest to the international hydrogeological community particularly as international legislation such as the European Water Framework Directive requires management of water issues across administrative boundaries with a varied cast of stakeholders The collection of papers provides a contrast between practitioner and research based approaches to assess and predict the anthropogenic impacts and environmental pressures

Physical Geology Today Damian Nance, Brendan E. Murphy, 2016 This text presents a clear and conceptual understanding of how Earth works emphasizing the role of tectonic plates throughout Using clear focused and engaging prose the authors discuss connections between concepts processes and principles in a straightforward manner The text introduces themes using stunning overview graphics at the beginning of each chapter and features hundreds of meticulously developed figures throughout in order to illustrate ongoing processes and changes over time
