Adler, Hellmut Fritzsche, 2013-12-19 **Disordered Semiconductors** Marc A. Kastner, Stadford R. Ovshinsky, Gordon A. Thomas, 2012-12-06 Twenty four years ago Hellmut Fritzsche came to our laboratory to evaluate our work in amorphous materials He came many times sometimes bringing his violin to play with our youngest son to talk to help to discover and to teach The times with him were always exciting and rewarding There was a camaraderie in the early years that has continued and a friendship that has deepened among Iris and me and Hellmut Sybille and their children The vision that Hellmut

Fritzsche shared with me the many important contributions he made the science that he helped so firmly to establish the courage he showed in the time of our adversity and the potential that he recognized put all of us in the amorphous field not only his close friends and collaborators in his debt He helped make a science out of intuition and played an important role not only in the experimental field but also in the basic theoretical aspects It has been an honor to work with Hellmut through the years

Unconventional Photoactive Solids Harvey Scher, 2013-03-09 The papers in this volume were presented at the Second International Conference on Unconventional Photoactive Solids held at the R D Center of BP America September 9-12 1985 It was part of an on going series of conferences with the main aim of stressing the Interrelationship of solid state physics and solid state chemistry The choice of topics covered a broad range of light Induced solid state phenomena with particular emphasis on novel materials and or novel phenomena Organic solids in particular were emphasized as they are a natural meeting point of solid state physics and chemistry A general trend In solid state physics Is to more complex materials e g nonequilibrium glassy films complicated unit cells extended molecular building blocks etc This trend necessitates the closer interaction between physicists and chemists This conference reflects this trend quite dramatically It is a new grouping together of a mix of materials people and experimental approaches A typical new theme pulling together this new mix can be seen in Part I Fractals in Disordered Media A variety of disordered media give rise to unusual temporal patterns of diffusion and reactions The more familiar spatial patterns of self similarity are discussed in the first article by M F Barnsley Another topic pulling together a diverse group of scientists is covered in Part II Spectral Hole Burning A number of leaders in this field are represented In these three papers

Inventory of advanced energy technologies and energy conservation research and development, 1976-1978 Oak Ridge National Laboratory,1979 *Introduction to Condensed Matter Physics* Duan Feng,Guojun Jin,2005 This is volume 1 of two volume book that presents an excellent comprehensive exposition of the multifaceted subjects of modern condensed matter physics unified within an original and coherent conceptual framework Traditional subjects such as band theory and lattice dynamics are tightly organized in this framework while many new developments emerge spontaneously from it In this volume Basic concepts are emphasized usually they are intuitively

introduced then more precisely formulated and compared with correlated concepts A plethora of new topics such as quasicrystals photonic crystals GMR TMR CMR high T_c superconductors Bose Einstein condensation etc are presented with sharp physical insights Bond and band approaches are discussed in parallel breaking the barrier between physics and chemistry A highly accessible chapter is included on correlated electronic states rarely found in an introductory text Introductory chapters on tunneling mesoscopic phenomena and quantum confined nanostructures constitute a sound foundation for nanoscience and nanotechnology The text is profusely illustrated with about 500 figures
