Fundamentals of Argumentation Theory Frans H. van Eemeren, Rob Grootendorst, Ralph H.

Johnson, Christian Plantin, Charles A. Willard, 2013-11-05 Argumentation theory is a distinctly multidisciplinary field of inquiry. It draws its data, assumptions, and methods from disciplines as disparate as formal logic and discourse analysis, linguistics and forensic science, philosophy and psychology, political science and education, sociology and law, and rhetoric and artificial intelligence. This presents the growing group of interested scholars and students with a problem of access since it is even for those active in the field not common to have acquired a familiarity with relevant aspects of each discipline that enters into this multidisciplinary matrix. This book offers its readers a unique comprehensive survey of the various theoretical contributions which have been made to the study of argumentation. It discusses the historical works that provide the background to the field and all major approaches and trends in contemporary research. Argument has been the subject of systematic inquiry for twenty five hundred years. It has been graced with theories such as formal logic or the legal theory of evidence that have acquired a more or less settled provenance with regard to specific issues. But there has been nothing to date that qualifies as a unified general theory of argumentation in all its richness and complexity. This being so, the argumentation theorist must have access to materials and methods that lie beyond his or her home subject. It is precisely on this account that this volume is offered to all the constituent research communities and their students. Apart from the historical sections, each chapter provides an economical introduction to the problems and methods that characterize a given part of the contemporary research program. Because the chapters are self-contained, they can be consulted in the order of a reader's interests or research requirements. But there is value in reading the work in its entirety. Jointly authored by the very people whose research has done much to define the current state of argumentation theory and to point the way toward more general and unified future treatments, this book is an impressively authoritative contribution to the field. *Critical Thinking* Gregory Hadley, Andrew Boon, 2022-10-31 Critical Thinking provides language teachers with a dynamic framework for encouraging critical thinking skills in explicit systematic ways during their lessons. With the proliferation of fallacious arguments, fake news, and untrustworthy sources in today's multimedia landscape, critical thinking skills are vital not only in one's native language but also when engaged in the task of language learning. Written with the language teacher in mind, this book provides a springboard for teaching critical thinking skills in multicultural, multilingual classrooms. Suitable for graduate students in training teachers and language curriculum developers interested in purposeful applications of critical thinking pedagogy for the second language classroom, this volume presents classroom activities, suggestions for lesson planning, and ideas for researching the impact of critical thinking activities with second language learners. This book is ideal as an invaluable resource for teacher-directed classroom investigations as well as graduate dissertation projects. ELTons 2024 Finalist Innovation in Teacher Resources. A detailed description of the book can be accessed through this 30-second video: https://1drv.ms/v/s/AhpTlkQv9ubFgYAkZw_UYt6qg3mItw-eDmqXaR Archaeology of Logic Andrew Schumann, 2023-04-27 The question arises whether logic was given to us by God or whether it is the result of human evolution. I believe that at least

the modus ponens rule $A \text{ and if } A \text{ then } B \text{ implies } B$ is inherent in humans but probably many other modern systems e.g. resource logic non monotonic logic etc are the result of humans adapting to the environment It is therefore of interest to study and compare the way logic is used in ancient cultures as well as the way logic is going to be used in our 21st century This welcome book studies and compares the way formation of logic in three cultures Ancient Greek 4th century B.C. Judaic 1st century B.C. 1st century A.D. and Indo Buddhist 2nd century A.D. The book notes that logic became especially popular during the period of late antiquity in countries covered by the international trade of the Silk Road This study makes a valuable contribution to the history of logic and to the very understanding of the origins and nature of logical thinking Prof Dov Gabbay King's College London UK Andrew Schumann in his book demonstrates that logic step by step arose in different places and cultural circles He argues that if we apply a structural genealogical method as well as turn to various sources particularly religious philosophical linguistic etc then we can obtain a more general and more adequate picture of emergence and development of logic This book is a new and very valuable contribution to the history of logic as a manifestation of the human mind Prof Jan Wolenski Jagiellonian University Poland The author of the *Archaeology of Logic* defends the claim calling it logic is after all which sees logical competence as a practical skill that people began to learn in antiquity as soon as they realized that avoiding cognitive biases in their reasoning would make their daily activities more successful The in depth reading of the book with its diving into the comparative quotations in the long dead or hardly known to most of us languages like Sumerian Akkadian Aramaic Hebrew and etc will be rewarded by the response that the logical competence is diverse and it can be trained despite the inevitability of the reasoning fallacies and that critical discussions and agonial character of the social life are the necessary tools for that Prof Elena Lisanyuk *Critical Thinking in Moral Development*, 2024-12-09 This book is for anyone interested in these topics whether they are veterans or relative newcomers to the field because the editors have assembled a stellar group of seventeen international contributors There are four sections devoted respectively to philosophical perspectives developmental psychology educational practices and assessment Each section consists of three initial chapters followed by a commentary that highlights notable themes and gives guidance for further inquiry Along with the Introduction and Epilogue contributed by the editors Daniel Fasko and Frank Fair the chapters develop themes such as the role of the ideas of Aristotle and Kant in shaping our moral development and educational practices Here readers will encounter informative discussions of among other things The 4Es of Virtuous Purpose The Rational Construction of Morality and Philosophy Goes to High School Readers are also led to consider Measures of Moral Identity The EQUIP Program and Assessing Value Clarity and Moral Blueprints The diversity of expertise and the international vantage points of the contributors make this book an informative overview for the expert and a useful introduction for the beginning student concerning the issues involved Contributors are Jennifer Baker Marvin W Berkowitz M Neil Browne Michael W Creane Juan P Dabdoub Frank Fair Daniel Fasko Jr John C Gibbs David Kaspar J n Knap k Martina
