The ripple effects of urbanization on logistics demand careful examination necessitating a comprehensive resource that sheds light on the dynamic complexities but identifies actionable strategies for a sustainable future. *Theories and Practices for Sustainable Urban Logistics* is a beacon for academic scholars seeking to untangle the intricate threads of urban logistics in the present tense. With a laser focus on theory, policy and real world applications, this publication aims to be the solution for understanding and addressing the evolving demands of urban logistics. By delving into historical evolution, exploring case studies and offering practical insights, the book equips readers with the knowledge needed to navigate the challenges and seize the opportunities of sustainable urban logistics. Supply Chain Management and Logistics in the Global Fashion Sector Rajkishore Nayak, 2020-11-12 The ways in which we design, make, transport and then discard clothes has a huge social and environmental impact. This book covers responsible business practices and sustainability in the fashion industry from the raw fibre stage through production to the point of customer consumption. The concepts of responsibility and sustainability are fast becoming essential factors in business decisions and *Supply Chain Management and Logistics in the Global Fashion Sector* leads the reader through the multiple stages in the supply chain that can impact on business strategy. A perfect resource for students studying fashion and for those working in the sector who wish to identify the latest thinking as they plan sustainability strategies, the book is divided into four clear sections. Part I of the book examines sustainability in the supply chain by identifying the three pillars of sustainability: social, economic and environmental, and considers how fashion brands are innovating in this area. Part II looks at fashion logistics and supply chain operations by assessing fibre, yarn and fabric considerations, logistical issues for both garment production and service delivery, stock control, transportation barriers and risks. Part III develops the logistics theme further by identifying recent trends and case studies.

that highlight agility and lean management structures and the application of transparency enhancing radio frequency identification RFID This section further applies modelling and simulation techniques from the automotive and pharmaceutical industries to the fashion sector Part IV considers how sustainability can be embedded into the multi tiered fashion supply chain and its selling environment

Approaches to Enhance the Performance of Simheuristic Methods in the Optimisation of Multi-echelon Logistics Distribution Networks Majsa Ammouriova, 2021 Management of logistics distribution networks is a challenging task Decision makers rely on logistics assistance systems that recommend actions to optimise the networks These systems can be based on simheuristics to benefit from metaheuristics in exploring possible solutions and on simulation for modelling the networks This book presents three approaches to recommend promising solutions to optimise the networks with fewer simulation runs The first approach utilises information from the network to guide the search of metaheuristics In this approach domain specific information is defined and assigned to actions The metaheuristic algorithm utilises this domain specific information to find more promising solutions The second approach is reducing the number of possible solutions by grouping actions with respect to their domain specific attributes Here the smaller solution space decreases the number of required simulation runs The last approach looks for equivalent solutions that cause the same changes in the network This approach aims to skip unnecessary evaluations and thus simulation effort
