Heating Ventilation And Air Conditioning Design Manual:

Air-conditioning System Design Manual Walter T. Grondzik, 2007 The Air Conditioning Manual assists entry level engineers in the design of air conditioning systems It is also usable in conjunction with fundamental HVAC R resource material as a senior or graduate level text for a university course in HVAC system design The manual was written to fill the void between theory and practice to bridge the gap between real world design practices and the theoretical calculations and analytical procedures or on the design of components This second edition represents an update and revision of the manual It now features the use of SI units throughout updated references and the editing of many illustrations Helps engineers quickly come up with a design solution to a required air conditioning system Includes issues from comfort to cooling load calculations New sections on Green HVAC systems deal with hot topic of sustainable buildings

Hotel HVAC Design Guide Charles Nehme, Hotels rely on efficient HVAC systems to ensure the comfort of their guests HVAC Heating Ventilation and Air Conditioning systems are used to control the temperature humidity and air quality of a hotel s interior environment By regulating a hotel s indoor environment HVAC systems help to create a more comfortable and healthy atmosphere for guests Hotels typically use a combination of heating and cooling systems to maintain the desired temperature in each room Heating systems like furnaces boilers and heat pumps are used to warm the air during colder months while cooling systems like air conditioners and evaporative coolers are used to cool the air in warmer months In addition ventilation systems are used to bring in fresh outdoor air and filter out airborne pollutants HVAC systems in hotels must be designed and maintained to meet the specific needs of the hotel Factors such as the size of the hotel the number of rooms and the climate of the local area all need to be taken into account when designing an HVAC system It is also important to ensure that the HVAC system is energy efficient as this can help reduce both energy costs and the hotel s environmental impact Hotels also rely on HVAC systems to filter out airborne pollutants such as dust pollen and other allergens Air filters and purifiers help to clean the air of these particles helping to reduce the risk of guests developing allergies or other respiratory illnesses Finally the HVAC system in a hotel plays an important role in controlling humidity levels Low humidity levels can cause guests to feel uncomfortable or even sick while high humidity levels can lead to mold and mildew growth By
