Heegner Modules and Elliptic Curves Martin L. Brown,2004-07-15 Heegner points on both modular curves and elliptic curves over global fields of any characteristic form the topic of this research monograph The Heegner module of an elliptic curve is an original concept introduced in this text The computation of the cohomology of the Heegner module is the main technical result and is applied to prove the Tate conjecture for a class of elliptic surfaces over finite fields this conjecture is equivalent to the Birch and Swinnerton Dyer conjecture for the corresponding elliptic curves over global fields *Heegner Modules and Elliptic Curves* ,2004 **Heegner Modules and Elliptic Curves** Martin L. Brown,2004-07-15 Heegner points on both modular curves and elliptic curves over global fields of any characteristic form the topic of this research monograph The Heegner module of an elliptic curve is an original concept introduced in this text The computation of the cohomology of the Heegner module is the main technical result and is applied to prove the Tate conjecture for a class of elliptic surfaces over finite fields this conjecture is equivalent to the Birch and Swinnerton Dyer conjecture for the corresponding elliptic curves over global fields **Arithmetic of L-functions** Cristian Popescu,Karl Rubin,Alice Silverberg,

Shafarevich-Tate Groups M.L. Brown,2025-03-13 This monograph explores the finiteness and structure of Shafarevich Tate groups of abelian varieties over global fields of any characteristic Readers will better understand how the methods of Euler systems and Kolyvagin systems can be adapted to Heegner points and CM points Also offered is a comprehensive overview of the most important classical and recent results on these objects Shafarevich Tate Groups will be a valuable resource to those interested in this active area of research *Number Theory, Analysis and Geometry* Dorian Goldfeld,Jay Jorgenson,Peter Jones,Dinakar Ramakrishnan,Kenneth Ribet,John Tate,2011-12-21 Serge Lang was an iconic figure in mathematics both for his own important work and for the indelible impact he left on the field of mathematics on his students and on his colleagues Over the course of his career Lang traversed a tremendous amount of mathematical ground As he moved from subject to subject he found analogies that led to important questions in such areas as number theory arithmetic geometry and the theory of negatively curved spaces Lang s conjectures will keep many mathematicians occupied far into the future In the spirit of Lang s vast contribution to mathematics this memorial volume contains articles by prominent mathematicians in a variety of areas of the field namely Number Theory Analysis and Geometry representing Lang s own breadth of interest and impact A special introduction by John Tate includes a brief and fascinating account of the Serge Lang s life This volume s group of 6 editors are also highly prominent mathematicians and were close to Serge Lang both academically and personally The volume is suitable to research mathematicians in the areas of Number Theory Analysis and Geometry **Heegner Points and Rankin L-Series** Henri Darmon,Shou-wu Zhang,2004-06-21 The seminal formula of Gross and Zagier relating heights of Heegner points to derivatives of the associated Rankin L series has led to many generalisations and extensions in a variety of different directions spawning a fertile area of study that remains active to this

day This volume based on a workshop on Special Values of Rankin L series held at the MSRI in December 2001 is a collection of thirteen articles written by many of the leading contributors in the field having the Gross Zagier formula and its avatars as a common unifying theme It serves as a valuable reference for mathematicians wishing to become further acquainted with the theory of complex multiplication automorphic forms the Rankin Selberg method arithmetic intersection theory Iwasawa theory and other topics related to the Gross Zagier formula   *The Computational and Theoretical Aspects of Elliptic Curves* Zhibin Liang,Chandrakant Aribam,2019-05-22 This volume presents a collection of results related to the BSD conjecture based on the first two India China conferences on this topic It provides an overview of the conjecture and a few special cases where the conjecture is proved The broad theme of the two conferences was Theoretical and Computational Aspects of the Birch and Swinnerton Dyer Conjecture The first was held at Beijing International Centre for Mathematical Research BICMR in December 2014 and the second was held at the International Centre for Theoretical Sciences ICTS Bangalore India in December 2016 Providing a broad overview of the subject the book is a valuable resource for young researchers wishing to work in this area The articles have an extensive list of references to enable diligent researchers to gain an idea of the current state of art on this conjecture   Mathematics Unlimited - 2001 and Beyond Björn Engquist,Wilfried Schmid,2017-04-05 This is a book guaranteed to delight the reader It not only depicts the state of mathematics at the end of the century but is also full of remarkable insights into its future de velopment as we enter a new millennium True to its title the book extends beyond the spectrum of mathematics to in clude contributions from other related sciences You will enjoy reading the many stimulating contributions and gain insights into the astounding progress of mathematics and the perspectives for its future One of the editors Bj rn Eng quist is a world renowned researcher in computational sci ence and engineering The second editor Wilfried Schmid is a distinguished mathematician at Harvard University Likewi se the authors are all foremost mathematicians and scien tists and their biographies and photographs appear at the end of the book Unique in both form and content this is a must read for every mathematician and scientist and in particular for graduates still choosing their specialty   *Elliptic Curves and Related Topics* H. Kisilevsky,Maruti Ram Murty,1994-01-01 This book represents the proceedings of a workshop on elliptic curves held in St Adele Quebec in February 1992 Containing both expository and research articles on the theory of elliptic curves this collection covers a range of topics from Langlands s theory to the algebraic geometry of elliptic curves from Iwasawa theory to computational aspects of elliptic curves This book is especially significant in that it covers topics comprising the main ingredients in Andrew Wiles s recent result on Fermat s Last Theorem   **P-adic Aspects Of Modular Forms** Baskar Balasubramanyam,A Raghuram,Jacques Tilouine,Haruzo Hida,2016-06-14 The aim of this book is to give a systematic exposition of results in some important cases where p adic families and p adic L functions are studied We first look at p adic families in the following cases general linear groups symplectic groups and definite unitary groups We also look at applications of this theory to modularity lifting problems We finally consider p adic L functions for GL 2 the p

adic adjoint L functions and some cases of higher GL n   **Annales scientifiques de l'École normale supérieure** École normale supérieure (France),2005   <u>Elementary and Analytic Theory of Algebraic Numbers</u> Wladyslaw Narkiewicz,2013-06-29 The aim of this book is to present an exposition of the theory of alge braic numbers excluding class field theory and its consequences There are many ways to develop this subject the latest trend is to neglect the classical Dedekind theory of ideals in favour of local methods However for numeri cal computations necessary for applications of algebraic numbers to other areas of number theory the old approach seems more suitable although its exposition is obviously longer On the other hand the local approach is more powerful for analytical purposes as demonstrated in Tate s thesis Thus the author has tried to reconcile the two approaches presenting a self contained exposition of the classical standpoint in the first four chapters and then turning to local methods In the first chapter we present the necessary tools from the theory of Dedekind domains and valuation theory including the structure of finitely generated modules over Dedekind domains In Chapters 2 3 and 4 the clas sical theory of algebraic numbers is developed Chapter 5 contains the fun damental notions of the theory of p adic fields and Chapter 6 brings their applications to the study of algebraic number fields We include here Shafare vich s proof of the Kronecker Weber theorem and also the main properties of adeles and ideles   <u>Arithmetic Algebraic Geometry</u> Brian David Conrad, The articles in this volume are expanded versions of lectures delivered at the Graduate Summer School and at the Mentoring Program for Women in Mathematics held at the Institute for Advanced Study Park City Mathematics Institute The theme of the program was arithmetic algebraic geometry The choice of lecture topics was heavily influenced by the recent spectacular work of Wiles on modular elliptic curves and Fermat s Last Theorem The main emphasis of the articles in the volume is on elliptic curves Galois representations and modular forms One lecture series offers an introduction to these objects The others discuss selected recent results current research and open problems and conjectures The book would be a suitable text for an advanced graduate topics course in arithmetic algebraic geometry

   Computational Approach to Riemann Surfaces Alexander I. Bobenko TU Berlin,Christian Klein,2011-02-03 This volume offers a well structured overview of existent computational approaches to Riemann surfaces and those currently in development The authors of the contributions represent the groups providing publically available numerical codes in this field Thus this volume illustrates which software tools are available and how they can be used in practice In addition examples for solutions to partial differential equations and in surface theory are presented The intended audience of this book is twofold It can be used as a textbook for a graduate course in numerics of Riemann surfaces in which case the standard undergraduate background i e calculus and linear algebra is required In particular no knowledge of the theory of Riemann surfaces is expected the necessary background in this theory is contained in the Introduction chapter At the same time this book is also intended for specialists in geometry and mathematical physics applying the theory of Riemann surfaces in their research It is the first book on numerics of Riemann surfaces that reflects the progress made in this field during the

last decade and it contains original results There are a growing number of applications that involve the evaluation of concrete characteristics of models analytically described in terms of Riemann surfaces Many problem settings and computations in this volume are motivated by such concrete applications in geometry and mathematical physics

Supersingular p-adic L-functions, Maass-Shimura Operators and Waldspurger Formulas Daniel Kriz,2021-11-09 A groundbreaking contribution to number theory that unifies classical and modern results This book develops a new theory of p adic modular forms on modular curves extending Katz s classical theory to the supersingular locus The main novelty is to move to infinite level and extend coefficients to period sheaves coming from relative p adic Hodge theory This makes it possible to trivialize the Hodge bundle on the infinite level modular curve by a canonical differential that restricts to the Katz canonical differential on the ordinary Igusa tower Daniel Kriz defines generalized p adic modular forms as sections of relative period sheaves transforming under the Galois group of the modular curve by weight characters He introduces the fundamental de Rham period measuring the position of the Hodge filtration in relative de Rham cohomology This period can be viewed as a counterpart to Scholze s Hodge Tate period and the two periods satisfy a Legendre type relation Using these periods Kriz constructs splittings of the Hodge filtration on the infinite level modular curve defining p adic Maass Shimura operators that act on generalized p adic modular forms as weight raising operators Through analysis of the p adic properties of these Maass Shimura operators he constructs new p adic L functions interpolating central critical Rankin Selberg L values giving analogues of the p adic L functions of Katz Bertolini Darmon Prasanna and Liu Zhang Zhang for imaginary quadratic fields in which p is inert or ramified These p adic L functions yield new p adic Waldspurger formulas at special values
