Cost Accounting for Shared IT Infrastructures Reinhard Brandl, 2008-08-21 During the past few years determining the value of IT has ranked high on the agenda of IT managers and Chief Information Officers CIOs The rather broad and abstract topic has been intensively discussed in the Information Systems literature for many years It turns into a very tangible problem in the field of IT cost accounting Nowadays corporate information systems are distributed systems A detailed measurement of resource demands of IT services on a distributed IT infrastructure and respective accounting and cost allocation turns out to be very expensive and impractical in most cases The large proportion of indirect costs and the difficulty of finding adequate allocation rates are a significant problem in practice regularly leading to free rider problems This problem has largely been ignored in the academic literature so far Dr Brandl proposes a method to derive estimators for the resource demand of service requests in a distributed IT infrastructure This estimator is based on a set of load tests and respective measurements as they are often performed during the deployment phase of new information systems Cost allocation keys can now be determined based on the number of service invocations per user or per department and the respective estimators While these measurements provide a lean method for the determination of usage based cost allocation keys it is not obvious that the estimators have sufficient accuracy in particular concerning different types of services and volatile workloads

project may well be the first and last project in your organisation that truly touches everyone from the office of your CEO to the newest recruit. It may well be the most significant investment that you ever make in your people, their processes and their systems and has the power and potential to transform your organisation. However, it can be a tough project to deliver, bringing great exposure to its participants. All your customers will be only a small march away down the corridor and will all know where you live. Considering the 1.5 billion market for intranet portal technology worldwide, there are surprisingly few books on the topic and those typically either very technical or very theoretical. The Intranet Portal Guide is a deliberately practical handbook for the stressed middle manager seeking to make things happen in their organisation. The book is divided into three sections: before, during and after, and 31 chapters addressing everything from the key issue of how to make the business case through to ongoing performance enhancement and benefit realisation. It is packed full of tools, templates, plans and processes for successful delivery based on real life experience of implementation at two major UK companies. **Micro**
