Logic, Language and Reasoning Hans Jurgen Ohlbach, Uwe Reyle, 2014-01-15 *Logic, Language and Reasoning* Hans Jürgen Ohlbach, U. Reyle, 2012-12-06
This volume is dedicated to Dov Gabbay who celebrated his 50 birthday in October 1995. Dov is one of the most outstanding and most productive researchers we have ever met. He has exerted a profound influence in major fields of logic, linguistics and computer science. His contributions in the areas of logic, language and reasoning are so numerous that a comprehensive survey would already fill half of this book. Instead of summarizing his work, we decided to let him speak for himself. Sitting in a car on the way to Amsterdam airport, he gave an interview to Jelle Gerbrandy and Anne Marie Mineur. This recorded conversation with him, which is included, gives a deep insight into his motivations and into his view of the world, the Almighty, and of course the role of logic. In addition, this volume contains a partially annotated bibliography of his main papers and books. The length of the bibliography and the broadness of the topics covered there speak for itself.

Logic, Language and Computation S. Akama, 2012-12-06
The editors of the Applied Logic Series are happy to present to the reader the fifth volume in the series: a collection of papers on Logic, Language and Computation. One very striking feature of the application of logic to language and to computation is that it requires the combination, the integration and the use of many diverse systems and methodologies all in the same single application. The papers in this volume will give the reader a glimpse into the problems of this active frontier of logic.

This book contains the revised papers presented at the Amsterdam Colloquium 2009 held in Amsterdam, The Netherlands, in December 2009. The 41 thoroughly refereed and revised contributions, presented together with the revised abstracts of 5 invited talks, are organized in five sections: the first section contains extended abstracts of the talks given by the invited speakers; the second, third and fourth sections contain invited and submitted contributions to the three thematic workshops hosted by the colloquium: the Workshop on Implicature and Grammar, the Workshop on Natural Logic and the Workshop on Vagueness; the final section consists of submissions to the general program. The topics covered range from descriptive

syntactic and semantic analyses of all kinds of expressions to theoretical logical and computational properties of semantic theories philosophical foundations evolution and learning of language

Foundations: Logic, Language, and Mathematics Hugues Leblanc, Elliott Mendelson, A. Orenstein, 2013-04-17 The more traditional approaches to the history and philosophy of science and technology continue as well and probably will continue as long as there are skillful practitioners such as Carl Hempel Ernest Nagel and their students Finally there are still other approaches that address some of the technical problems arising when we try to provide an account of belief and of rational choice These include efforts to provide logical frameworks within which we can make sense of these notions This series will attempt to bring together work from all of these approaches to the history and philosophy of science and technology in the belief that each has something to add to our understanding The volumes of this series have emerged either from lectures given by authors while they served as honorary visiting professors at the City College of New York or from conferences sponsored by that institution The City College Program in the History and Philosophy of Science and Technology oversees and directs these lectures and conferences with the financial aid of the Association for Philosophy of Science Psychotherapy and Ethics MARTIN TAMNY

RAPHAEL STERN PREFACE The papers in this collection stem largely from the conference Foundations Logic Language and Mathematics held at the Graduate Center of the City University of New York on 14 15 November 1980

of possible interactions between logic and the sciences related to information and computation and yet is small enough to allow for concrete and useful interaction among participants The present volume contains 13 contributed papers that were selected from among 32 submissions after a rigorous review by the Program Committee Each submission was reviewed by at least two and on average three Program Committee members This volume also contains papers or abstracts that relate to the seven invited talks presented at the workshop Between them these papers give a snapshot of some fascinating work taking place at the frontiers between computation logic and linguistics We are grateful to all the people who made this meeting possible and are responsible for its success the members of the Program Committee and the external reviewers the invited speakers the contributors and the people who were involved in organizing the workshop

Games: Unifying Logic, Language, and Philosophy Ondrej Majer, Ahti-Veikko Pietarinen, Tero Tulenheimo, 2009-01-16 Ondrej Majer Ahti-Veikko Pietarinen and Tero Tulenheimo 1 Games and logic in philosophy Recent years have witnessed a growing interest in the unifying methodologies over what have been perceived as pretty disparate logical systems or else merely an assortment of formal and mathematical approaches to philosophical inquiry

This development has largely been fueled by an increasing dissatisfaction to what has earlier been taken to be a straightforward outcome of logical pluralism or methodological diversity. These phrases appear to reflect the everyday chaos of our academic pursuits rather than any genuine attempt to clarify the general principles underlying the miscellaneous ways in which logic appears to us. But the situation is changing. Unity among plurality is emerging in contemporary studies in logical philosophy and neighbouring disciplines. This is a necessary follow up to the intensive research into the intricacies of logical systems and methodologies performed over the recent years. The present book suggests one such peculiar but very unrestrained methodological perspective over the field of logic and its applications in mathematics, language or computation games. An allegory for opposition, cooperation and coordination games are also concrete objects of formal study.

Categories and Types in Logic, Language, and Physics Claudia Casadio, Bob Coecke, Michael Moortgat, Philip Scott, 2014-04-03. For more than 60 years Jim Lambek has been a profoundly inspirational mathematician with groundbreaking contributions to algebra, category theory, linguistics, theoretical physics, logic and proof theory. This Festschrift was put together on the occasion of his 90th birthday. The papers in it give a good picture of the multiple research areas where the impact of Jim Lambek's work can be felt. The volume includes contributions by prominent researchers and by their students showing how Jim Lambek's ideas keep inspiring upcoming generations of scholars.

Introduction to Logic and Logical Discourse Satya Sundar Sethy, 2021-06-12. This book focuses on logic and logical language. It examines different types of words, terms and propositions in detail. While discussing the nature of propositions it illustrates the procedures used to determine the truth and falsity of a proposition and the validity and invalidity of an argument. In addition, the book provides a clear exposition of the pure and mixed form of syllogism with suitable examples. The book encompasses sentential logic, predicate logic, symbolic logic, induction and set theory topics. The book is designed to serve all those involved in teaching and learning courses on logic. It offers a valuable resource for students and researchers in philosophy, mathematics and computer science disciplines. Given its scope, it is an essential read for everyone interested in logic, language, formulation of the hypotheses for the scientific enquiries and research studies and judging valid and invalid arguments in the natural language discourse.
