Lectures On Algebraic Cycles New Mathematical Monographs:

Lectures on Algebraic Cycles Spencer Bloch, 2010-07-22 Spencer Bloch's 1979 Duke lectures are a milestone in modern mathematics; they have been out of print almost since their first publication in 1980 yet they have remained influential and are still the best place to learn the guiding philosophy of algebraic cycles and motives. This edition, now professionally typeset, has a new preface by the author giving his perspective on developments in the field over the past 30 years. The theory of algebraic cycles encompasses such central problems in mathematics as the Hodge conjecture and the Bloch-Kato conjecture on special values of zeta functions. The book begins with Mumford's example showing that the Chow group of zero cycles on an algebraic variety can be infinite dimensional and explains how Hodge theory and algebraic K theory give new insights into this and other phenomena.

Central Simple Algebras and Galois Cohomology Philippe Gille, Tamás Szamuely, 2017-08-10 The first comprehensive modern introduction to central simple algebra starting from the basics and reaching advanced results.

Lectures on the Theory of Pure Motives Jacob P. Murre, Jan Nagel, Chris Peters, 2013-04-11 The theory of motives was created by Grothendieck in the 1960s as he searched for a universal cohomology theory for algebraic varieties. The theory of pure motives is well established as far as the construction is concerned. Pure motives are expected to have

The Bloch-Kato Conjecture for the Riemann Zeta Function John Coates, A. Raghuram, Anupam Saikia, R. Sujatha, 2015-03-19 There are still many arithmetic mysteries surrounding the values of the Riemann zeta function at the odd positive integers greater than one. For example, the matter of their irrationality, let alone transcendence, remains largely unknown. However, by extending ideas of Garland, Borel proved that these values are related to the higher K theory of the ring of integers. Shortly afterwards, Bloch and Kato proposed a Tamagawa number type conjecture for these values and showed that it would follow from a result in motivic cohomology which was unknown at the time. This vital result from motivic cohomology was subsequently proven by Huber, Kings, and Wildeshaus. Bringing together key results from K theory, motivic cohomology, and Iwasawa theory, this book is the first to give a complete proof accessible to graduate students of the Bloch-Kato conjecture for odd positive integers. It includes a new account of the results from motivic cohomology by Huber and Kings.

The Fourier Transform for Certain Hyperkähler Fourfolds Mingmin Shen, Charles Vial, 2016-03-10 Using a codimension 1 algebraic cycle obtained from the Poincaré line bundle, Beauville defined the Fourier transform on the Chow groups of an abelian variety A and showed that the Fourier transform induces a decomposition of the Chow ring $CH^*(A)$. By using a codimension 2 algebraic cycle representing the Beauville-Bogomolov class, the authors give evidence for the existence of a similar decomposition for the Chow ring of hyperkähler varieties deformation equivalent to the Hilbert scheme of length 2 subschemes on a K3 surface. They indeed establish the existence of such a decomposition for the Hilbert scheme of length 2 subschemes on a K3 surface and for the variety of lines on a very general cubic fourfold.

The Brauer-Grothendieck Group Jean-Louis Colliot-Thélène, Alexei N. Skorobogatov, 2021-07-30 This monograph provides a systematic treatment of the Brauer group of

schemes from the foundational work of Grothendieck to recent applications in arithmetic and algebraic geometry The importance of the cohomological Brauer group for applications to Diophantine equations and algebraic geometry was discovered soon after this group was introduced by Grothendieck The Brauer Manin obstruction plays a crucial role in the study of rational points on varieties over global fields The birational invariance of the Brauer group was recently used in a novel way to establish the irrationality of many new classes of algebraic varieties The book covers the vast theory underpinning these and other applications Intended as an introduction to cohomological methods in algebraic geometry most of the book is accessible to readers with a knowledge of algebra algebraic geometry and algebraic number theory at graduate level Much of the more advanced material is not readily available in book form elsewhere notably de Jong's proof of Gabber's theorem the specialisation method and applications of the Brauer group to rationality questions an in depth study of the Brauer Manin obstruction and proof of the finiteness theorem for the Brauer group of abelian varieties and K3 surfaces over finitely generated fields The book surveys recent work but also gives detailed proofs of basic theorems maintaining a balance between general theory and concrete examples Over half a century after Grothendieck's foundational seminars on the topic The Brauer Grothendieck Group is a treatise that fills a longstanding gap in the literature providing researchers including research students with a valuable reference on a central object of algebraic and arithmetic geometry

Rationality of Varieties Gavril Farkas, Gerard van der Geer, Mingmin Shen, Lenny Taelman, 2021-10-19 This book provides an overview of the latest progress on rationality questions in algebraic geometry It discusses new developments such as universal triviality of the Chow group of zero cycles various aspects of stable birationality cubic and Fano fourfolds rationality of moduli spaces and birational invariants of group actions on varieties contributed by the foremost experts in their fields The question of whether an algebraic variety can be parametrized by rational functions of as many variables as its dimension has a long history and played an important role in the history of algebraic geometry Recent developments in algebraic geometry have made this question again a focal point of research and formed the impetus to organize a conference in the series of conferences on the island of Schiermonnikoog The book follows in the tradition of earlier volumes which originated from conferences on the islands Texel and Schiermonnikoog *Period Mappings and Period Domains* James Carlson, Stefan Müller-Stach, Chris Peters, 2017-08-11 This up to date introduction to Griffiths theory of period maps and period domains focusses on algebraic group theoretic and differential geometric aspects Starting with an explanation of Griffiths basic theory the authors go on to introduce spectral sequences and Koszul complexes that are used to derive results about cycles on higher dimensional algebraic varieties such as the Noether Lefschetz theorem and Nori's theorem They explain differential geometric methods leading up to proofs of Arakelov type theorems the theorem of the fixed part and the rigidity theorem They also use Higgs bundles and harmonic maps to prove the striking result that not all compact quotients of period domains are Kähler This thoroughly revised second edition includes a new third part covering important recent

developments in which the group theoretic approach to Hodge structures is explained leading to Mumford Tate groups and their associated domains the Mumford Tate varieties and generalizations of Shimura varieties Factorization Algebras in Quantum Field Theory Kevin Costello,Owen Gwilliam,2017 This first volume develops factorization algebras with a focus upon examples exhibiting their use in field theory which will be useful for researchers and graduates Reduction Theory and Arithmetic Groups Joachim Schwermer,2022-12-15 Build a solid foundation in the area of arithmetic groups and explore its inherent geometric and number theoretical components Pseudo-reductive Groups Brian Conrad,Ofer Gabber,Gopal Prasad,2015-06-04 This monograph provides a comprehensive treatment of the theory of pseudo reductive groups and gives their classification in a usable form This second edition has been revised and updated with Chapter 9 being completely rewritten via the useful new notion of minimal type for pseudo reductive groups **Hardy Martingales** Paul F. X. Müller,2022-07-14 This book presents the probabilistic methods around Hardy martingales for applications to complex harmonic and functional analysis Conformal Blocks, Generalized Theta Functions and the Verlinde Formula Shrawan Kumar,2021-11-25 This book gives a complete proof of the Verlinde formula and of its connection to generalized theta functions Spectral Spaces Max Dickmann,Niels Schwartz,Marcus Tressl,2019-03-21 Spectral spaces are a class of topological spaces They are a tool linking algebraic structures in a very wide sense with geometry They were invented to give a functional representation of Boolean algebras and distributive lattices and subsequently gained great prominence as a consequence of Grothendieck's invention of schemes There are more than 1 000 research articles about spectral spaces but this is the first monograph It provides an introduction to the subject and is a unified treatment of results scattered across the literature filling in gaps and showing the connections between different results The book includes new research going beyond the existing literature answering questions that naturally arise from this comprehensive approach The authors serve graduates by starting gently with the basics For experts they lead them to the frontiers of current research making this book a valuable reference source **Representations of Solvable Lie Groups** Didier Arnal,Bradley Currey,2020-04-08 The theory of unitary group representations began with finite groups and blossomed in the twentieth century both as a natural abstraction of classical harmonic analysis and as a tool for understanding various physical phenomena Combining basic theory and new results this monograph is a fresh and self contained exposition of group representations and harmonic analysis on solvable Lie groups Covering a range of topics from stratification methods for linear solvable actions in a finite dimensional vector space to complete proofs of essential elements of Mackey theory and a unified development of the main features of the orbit method for solvable Lie groups the authors provide both well known and new examples with a focus on those relevant to contemporary applications Clear explanations of the basic theory make this an invaluable reference guide for graduate students as well as researchers **Symplectic Topology and Floer Homology: Volume 1, Symplectic Geometry and Pseudoholomorphic Curves** Yong-Geun Oh,2015-08-27 Published in two volumes this is the first book to

provide a thorough and systematic explanation of symplectic topology and the analytical details and techniques used in applying the machinery arising from Floer theory as a whole Volume 1 covers the basic materials of Hamiltonian dynamics and symplectic geometry and the analytic foundations of Gromov's pseudoholomorphic curve theory One novel aspect of this treatment is the uniform treatment of both closed and open cases and a complete proof of the boundary regularity theorem of weak solutions of pseudo holomorphic curves with totally real boundary conditions Volume 2 provides a comprehensive introduction to both Hamiltonian Floer theory and Lagrangian Floer theory Symplectic Topology and Floer Homology Yong-Geun Oh, 2015-08-27 The second part of a two volume set offering a systematic explanation of symplectic topology This volume provides a comprehensive introduction to Hamiltonian and Lagrangian Floer theory

Non-Hausdorff Topology and Domain Theory Jean Goubault-Larrecq, 2013-03-28 This unique book on modern topology looks well beyond traditional treatises and explores spaces that may but need not be Hausdorff This is essential for domain theory the cornerstone of semantics of computer languages where the Scott topology is almost never Hausdorff For the first time in a single volume this book covers basic material on metric and topological spaces advanced material on complete partial orders Stone duality stable compactness quasi metric spaces and much more An early chapter on metric spaces serves as an invitation to the topic continuity limits compactness completeness and forms a complete introductory course by itself Graduate students and researchers alike will enjoy exploring this treasure trove of results Full proofs are given as well as motivating ideas clear explanations illuminating examples application exercises and some more challenging problems for more advanced readers

Global Homotopy Theory Stefan Schwede, 2018-09-06 A comprehensive self contained approach to global equivariant homotopy theory with many detailed examples and sample calculations

Equivariant Stable Homotopy Theory and the Kervaire Invariant Problem Michael A. Hill, Michael J. Hopkins, Douglas C. Ravenel, 2021-07-29 The long standing Kervaire invariant problem in homotopy theory arose from geometric and differential topology in the 1960s and was quickly recognised as one of the most important problems in the field In 2009 the authors of this book announced a solution to the problem which was published to wide acclaim in a landmark *Annals of Mathematics* paper The proof is long and involved using many sophisticated tools of modern equivariant stable homotopy theory that are unfamiliar to non experts This book presents the proof together with a full development of all the background material to make it accessible to a graduate student with an elementary algebraic topology knowledge There are explicit examples of constructions used in solving the problem Also featuring a motivating history of the problem and numerous conceptual and expository improvements on the proof this is the definitive account of the resolution of the Kervaire invariant problem
