Lectures On Modules And Rings Graduate Texts In Mathematics:

Lectures on Modules and Rings Tsit-Yuen Lam, 2012-12-06 Textbook writing must be one of the cruelest of self inflicted tortures Carl Faith Math Reviews 54 5281 So why didn't I heed the warning of a wise colleague especially one who is a great expert in the subject of modules and rings The answer is simple I did not learn about it until it was too late My writing project in ring theory started in 1983 after I taught a year long course in the subject at Berkeley My original plan was to write up my lectures and publish them as a graduate text in a couple of years My hopes of carrying out this plan on schedule were however quickly dashed as I began to realize how much material was at hand and how little time I had at my disposal As the years went by I added further material to my notes and used them to teach different versions of the course Eventually I came to the realization that writing a single volume would not fully accomplish my original goal of giving a comprehensive treatment of basic ring theory At the suggestion of Ulrike Schmickler Hirzebruch then Mathematics Editor of Springer Verlag I completed the first part of my project and published the write up in 1991 as *A First Course in Noncommutative Rings* GTM 131 hereafter referred to as First Course or simply FC

Exercises in Modules and Rings T.Y. Lam, 2009-12-08 The idea of writing this book came roughly at the time of publication of my graduate text *Lectures on Modules and Rings* Springer GTM Vol 189 1999 Since that time teaching obligations and intermittent intervention of other projects caused prolonged delays in the work on this volume Only a lucky break in my schedule in 2006 enabled me to put the finishing touches on the completion of this long overdue book This book is intended to serve a dual purpose First it is designed as a problem book for Lectures As such it contains the statements and full solutions of the many exercises that appeared in Lectures Second this book is also offered as a reference and repository for general information in the theory of modules and rings that may be hard to find in the standard textbooks in the field As a companion volume to Lectures this work covers the same mathematical material as its parent work namely the part of ring theory that makes substantial use of the notion of modules The two books thus share the same table of contents with the first half treating projective injective and flat modules homological and uniform dimensions and the second half dealing with noncommutative localizations and Goldie's theorems maximal rings of quotients Frobenius and quasi Frobenius rings concluding with Morita's theory of category equivalences and dualities

Lectures on Modules and Rings Tsit-Yuen Lam, 1998-10-01 *Algebras, Rings and Modules* Michiel Hazewinkel, Vladimir V. Kirichenko, 2007 As a natural continuation of the first volume of *Algebras Rings and Modules* this book provides both the classical aspects of the theory of groups and their representations as well as a general introduction to the modern theory of representations including the representations of quivers and finite partially ordered sets and their applications to finite dimensional algebras Detailed attention is given to special classes of algebras and rings including Frobenius quasi Frobenius right serial rings and tiled orders using the technique of quivers The most important recent developments in the theory of these rings are examined The Cartan Determinant Conjecture and some properties of global

dimensions of different classes of rings are also given The last chapters of this volume provide the theory of semiprime Noetherian semiperfect and semidistributive rings Of course this book is mainly aimed at researchers in the theory of rings and algebras but graduate and postgraduate students especially those using algebraic techniques should also find this book of interest

Ring Theory and Its Applications Dinh Van Huynh, S. K. Jain, Sergio R. López-Permouth, S. Tariq Rizvi, Cosmin S. Roman, 2014-02-21 This volume contains the proceedings of the Ring Theory Session in honor of T Y Lam's 70th birthday at the 31st Ohio State Denison Mathematics Conference held from May 25-27 2012 at The Ohio State University Columbus Ohio Included are expository articles and research papers covering topics such as cyclically presented modules Eggert's conjecture the Mittag-Leffler conditions clean rings McCoy rings QF rings projective and injective modules Baer modules and Leavitt path algebras Graduate students and researchers in many areas of algebra will find this volume valuable as the papers point out many directions for future work in particular several articles contain explicit lists of open questions

A First Course in Noncommutative Rings T.Y. Lam, 2012-12-06 One of my favorite graduate courses at Berkeley is Math 251 a one semester course in ring theory offered to second year level graduate students I taught this course in the Fall of 1983 and more recently in the Spring of 1990 both times focusing on the theory of noncommutative rings This book is an outgrowth of my lectures in these two courses and is intended for use by instructors and graduate students in a similar one semester course in basic ring theory Ring theory is a subject of central importance in algebra Historically some of the major discoveries in ring theory have helped shape the course of development of modern abstract algebra Today ring theory is a fertile meeting ground for group theory group rings representation theory modules functional analysis operator algebras Lie theory enveloping algebras algebraic geometry finitely generated algebras differential operators invariant theory arithmetic orders Brauer groups universal algebra varieties of rings and homological algebra cohomology of rings projective modules Grothendieck and higher K groups In view of these basic connections between ring theory and other branches of mathematics it is perhaps no exaggeration to say that a course in ring theory is an indispensable part of the education for any fledgling algebraist The purpose of my lectures was to give a general introduction to the theory of rings building on what the students have learned from a standard first year graduate course in abstract algebra

Rings, Modules and Representations Viet Dung Nguyen, 2009 The papers in this volume contain results in active research areas in the theory of rings and modules including non commutative and commutative ring theory module theory representation theory and coding theory

Commutative Ring Theory and Applications Marco Fontana, Salah-Eddine Kabbaj, Sylvia Wiegand, 2017-07-27 Featuring presentations from the Fourth International Conference on Commutative Algebra held in Fez Morocco this reference presents trends in the growing area of commutative algebra With contributions from nearly 50 internationally renowned researchers the book emphasizes innovative applications and connections to algebraic number theory geometry

Algebras, Rings And Their Representations - Proceedings Of The International Conference On

Algebras, Modules And Rings Alberto Facchini, Kent Fuller, Claus M Ringel, Catarina Santa-clara, 2006-02-20 Surveying the most influential developments in the field this proceedings reviews the latest research on algebras and their representations commutative and non commutative rings modules conformal algebras and torsion theories The volume collects stimulating discussions from world renowned names including Tsit Yuen Lam Larry Levy Barbara Osofsky and Patrick Smith

Involution Werner M. Seiler, 2009-10-26 The book provides a self contained account of the formal theory of general i e also under and overdetermined systems of differential equations which in its central notion of involution combines geometric algebraic homological and combinatorial ideas

Algebra and Its Applications Manoj Kumar Patel, Mohammad Ashraf, Najib Mahdou, Hwankoo Kim, 2025-01-13 This volume contains selected chapters on algebra and related topics presented at the International Conference on Algebra and its Applications held at the Department of Mathematics Faculty of Science and Technology Sidi Mohamed Ben Abdellah University Fez Morocco from 12 15 July 2023 held in honour of Prof Ayman Badawi and Prof Abdelmoujib Benkirane It contains a cross section of topics in algebra and its applications which contribute to the development of pure and applied algebra Chapters in the book focus on modern trends and techniques in various branches of pure and applied algebra and highlight their applications in several other branches of mathematics like coding theory cryptography and graph theory Covering a broad range of topics in pure and applied algebra the book will be useful to a wide spectrum of researchers and graduate students in mathematics

Jordan Structures in Lie Algebras Antonio Fernández López, 2019-08-19 Explores applications of Jordan theory to the theory of Lie algebras After presenting the general theory of nonassociative algebras and of Lie algebras the book then explains how properties of the Jordan algebra attached to a Jordan element of a Lie algebra can be used to reveal properties of the Lie algebra itself

Surveys in Representation Theory of Algebras Alex Martsinkovsky, Kiyoshi Igusa, Gordana Todorov, 2018-09-12 This volume contains selected expository lectures delivered at the annual Maurice Auslander Distinguished Lectures and International Conference over the last several years Reflecting the diverse landscape of modern representation theory of algebras the selected articles include a quick introduction to tilting modules a survey on the first decade of co t structures in triangulated categories a functorial approach to the notion of module a representation theoretic approach to recollements in abelian categories new examples of applications of relative homological algebra connections between Coxeter groups and quiver representations and recent progress on limits of approximation theory

Quasi-Hopf Algebras Daniel Bulacu, Stefaan Caenepeel, Florin Panaite, Freddy Van Oystaeyen, 2019-02-21 This self contained book dedicated to Drinfeld s quasi Hopf algebras takes the reader from the basics to the state of the art

Ergodic Theory David Kerr, Hanfeng Li, 2017-02-09 This book provides an introduction to the ergodic theory and topological dynamics of actions of countable groups It is organized around the theme of probabilistic and combinatorial independence and highlights the complementary roles of the asymptotic and the perturbative in its comprehensive treatment of the core concepts of weak mixing compactness entropy and

amenability The more advanced material includes Popa's cocycle superrigidity the Furstenberg Zimmer structure theorem and sofic entropy The structure of the book is designed to be flexible enough to serve a variety of readers The discussion of dynamics is developed from scratch assuming some rudimentary functional analysis measure theory and topology and parts of the text can be used as an introductory course Researchers in ergodic theory and related areas will also find the book valuable as a reference

Laurent Series Rings and Related Rings Askar Tuganbaev, 2020-09-21 In this book ring theoretical properties of skew Laurent series rings $A[x]$ over a ring A where A is an associative ring with non zero identity element are described In addition we consider Laurent rings and Malcev Neumann rings which are proper extensions of skew Laurent series rings

Müller a renowned algebraist is a collection of papers that provide a snapshot of the diversity of themes and applications that interest algebraists today The papers highlight the latest progress in ring and module research and present work done on the frontiers of the topics discussed In addition selected expository articles are included to give algebraists and other mathematicians including graduate students an accessible introduction to areas that may be outside their own expertise

Steinberg Groups for Jordan Pairs Ottmar Loos, Erhard Neher, 2020-01-10 The present monograph develops a unified theory of Steinberg groups independent of matrix representations based on the theory of Jordan pairs and the theory of 3 graded locally finite root systems The development of this approach occurs over six chapters progressing from groups with commutator relations and their Steinberg groups then on to Jordan pairs 3 graded locally finite root systems and groups associated with Jordan pairs graded by root systems before exploring the volume's main focus the definition of the Steinberg group of a root graded Jordan pair by a small set of relations and its central closedness Several original concepts such as the notions of Jordan graphs and Weyl elements provide readers with the necessary tools from combinatorics and group theory Steinberg Groups for Jordan Pairs is ideal for PhD students and researchers in the fields of elementary groups Steinberg groups Jordan algebras and Jordan pairs By adopting a unified approach anybody interested in this area who seeks an alternative to case by case arguments and explicit matrix calculations will find this book essential

Algebraic and Symbolic Computation Methods in Dynamical Systems Alban Quadrat, Eva Zerz, 2020-05-30 This book aims at reviewing recent progress in the direction of algebraic and symbolic computation methods for functional systems e.g. ODE systems differential time delay equations difference equations and integro differential equations In the nineties modern algebraic theories were introduced in mathematical systems theory and in control theory Combined with real algebraic geometry which was previously introduced in control theory the past years have seen a flourishing development of algebraic methods in control theory One of the strengths of algebraic methods lies in their close connections to computations The use of the above mentioned algebraic theories in control theory has been an important source of motivation to develop effective versions of these theories when possible With the development of

computer algebra and computer algebra systems symbolic methods for control theory have been developed over the past years The goal of this book is to propose a partial state of the art in this direction To make recent results more easily accessible to a large audience the chapters include materials which survey the main mathematical methods and results and which are illustrated with explicit examples
