15 minutes	Daily Routines: Problem of the Day: Draw counters to add: $7 + 7 = \underline{\hspace{1cm}}$ I Do: Instruct students to use connecting cubes or draw the problem: $4 + 5 = \underline{\hspace{1cm}}$ Then, model for students how the reverse order of the addends does not change the sum. The addition facts $4 + 5 = 9$ and $5 + 4 = 9$ have the same part and whole. Changing the parts added does not change the whole. (Early finishers try $4 + 4 = 8$) Do over vocabulary		What will happen to the total number of cubes if you change the order of the numbers being added? Explain. How can models help you solve this problem? Can you write another addition fact with 4, 5, and 9?												
15 minutes	We Do: Page 6: Look at the models: $6 + 3$ Model Thinking: You can start with 6 and count on 3. Since 6 is a greater number it is easier to count on 3 more (7, 8, 9). When you use a smaller number you need to count on more and can make mistakes. For example $3 + 6$ (4, 5, 6, 7, 8, 9). How are these two addition equations alike? $6 + 3$ and $3 + 6$ How are they different? How do you know that $3 + 6$ and $6 + 3$? Together as a class complete problems 1 and 2. Turn and Talk 1: If you add two numbers in a different order will you get the same sum? Turn and Talk 2: Create a QOE question about the order of addends. Ask your partner.		Is counting on 3 cubes from 6 easier or harder than just counting all the cubes? (easier) Why is it easier to count on from a greater number, 6, than to count on from the lesser number, 3? How is $6 + 3$ the same as or equal to $3 + 6$? (When you add $6 + 3$, the value is 9, and 9 is equal to 9. Does $3 + 6$ also have the same value as 9?

New Horizons in Mathematics and Science Education, 2001

Refining the Mathematics Knowledge Base Bindu Elizabeth Pothen, 2011 Understanding the knowledge that teachers must bring to their classrooms is critical to the advancement of the field of teacher education Understanding how teacher knowledge impacts various aspects of teacher practice is also critical Understanding the interplay between teacher knowledge and practice and consequently the result that this relationship has on student learning is most important This dissertation attempts to advance our collective understanding of the complex relationship between teacher knowledge teacher practice and student learning in the field of elementary mathematics Four third grade teachers were followed as they taught a subset of lessons in a unit on fractions The study first investigates the types of knowledge that the teachers brought to their classrooms Then an examination is conducted of the way in which these types of knowledge impacted their teaching practice Finally the student learning that resulted over the course of these lessons is discussed This study supports the widespread belief that teacher knowledge is important to instruction The descriptions of the case study teachers highlight that their varying levels of knowledge resulted in unique aspects of practice being emphasized in their classrooms This dissertation documents the differences in teaching practice and the trade offs that produce differences in student learning Interesting student learning patterns emerged based on qualitative student interviews Medium students from classrooms in which teachers focused for more sustained periods on mathematical concepts seemed to demonstrate greater procedural fluency and deeper conceptual understanding than their peers in the other classrooms Low students in classrooms where fluency was the focus seemed to show slightly greater procedural fluency though less conceptual understanding than their peers in the classrooms that spent more time on concepts High students showed no appreciable difference across all classrooms This

study adds to the field by introducing a new construct the conceptual threshold to offer an explanation of these student learning trends
