

ENGINE COOLING

The cooling system is responsible for cooling the engine casing and the engine lubrication oil inside the heat exchanger (2).

From the circulation pump (1), the coolant is sent to the heat exchanger (2) where the engine lubrication oil is cooled. From here the coolant reaches the engine block and, after having cooled the cylinders, is sent to the thermostat casing.

Depending on the temperature, the coolant is either recirculated by the water pump (3) or sent to the radiator.
