**Solving Ordinary Differential Equations II** Ernst Hairer, Gerhard Wanner, 2013-03-14. Whatever regrets may be we have done our best. Sir Ernest Shackleton turning back on 9 January 1909 at 88° 23' South. Brahms struggled for 20 years to write his first symphony. Compared to this, the 10 years we have been working on these two volumes may even appear short. This second volume treats stiff differential equations and differential algebraic equations. It contains three chapters: Chapter IV on one step Runge Kutta methods for stiff problems, Chapter V on multistep methods for stiff problems, and Chapter VI on singular perturbation and differential algebraic equations. Each chapter is divided into sections. Usually the first sections of a chapter are of an introductory nature, explain numerical phenomena, and exhibit numerical results. Investigations of a more theoretical nature are presented in the later sections of each chapter. As in Volume I, the formulas, theorems, tables, and figures are numbered consecutively in each section and indicate in addition the section number. In cross references to other chapters, the Latin chapter number is put first. References to the bibliography are again by author plus year in parentheses. The bibliography again contains only those papers which are discussed in the text and is in no way meant to be complete.

The Numerical Solution of Differential-Algebraic Systems by Runge-Kutta Methods Ernst Hairer, Christian Lubich, Michel Roche, 2006-11-14. The term differential algebraic equation was coined to comprise differential equations with constraints, differential equations on manifolds, and singular implicit differential equations. Such problems arise in a variety of applications, e.g., constrained mechanical systems, fluid dynamics, chemical reaction kinetics, simulation of electrical networks, and control engineering. From a more theoretical viewpoint, the study of differential algebraic problems gives insight into the behaviour of numerical methods for stiff ordinary differential equations. These lecture notes provide a self-contained and comprehensive treatment of the numerical solution of differential algebraic systems using Runge-Kutta methods and also extrapolation methods. Readers are expected to have a background in the numerical treatment of ordinary differential equations. The subject is treated in its various aspects, ranging from the theory through the analysis to implementation and applications. Beneficial Or Critical? United States. Congress. House.
