Learning To Heal The Development Of American Medical Education:

Learning To Heal Kenneth M. Ludmerer, 1985 USA Medizin Ausbildung
This text aims to provide a framework within which informed choices can be made regarding the future of medical education and health care in America
Sickness and Health in America Judith Walzer Leavitt, Ronald L. Numbers, 1997 Adds 21 new essays and drops some that appeared in the 1984 edition first in 1978 to reflect recent scholarship and changes in orientation by historians Adds entirely new clusters on sickness and health early American medicine therapeutics the art of medicine and public health and personal hygiene Other discussions are updated to reflect such phenomena as the growing mortality from HIV homicide and suicide No index Annotation copyrighted by Book News Inc Portland OR Time to Heal Kenneth M. Ludmerer M.D., 1999-11-11 Already the recipient of extraordinary critical acclaim this magisterial book provides a landmark account of American medical education in the twentieth century concluding with a call for the reformation of a system currently handicapped by managed care and by narrow self centered professional interests Kenneth M Ludmerer describes the evolution of American medical education from 1910 when a muck raking report on medical diploma mills spurred the reform and expansion of medical schools to the current era of managed care when commercial interests once more have come to the fore compromising the training of the nation's future doctors Ludmerer portrays the experience of learning medicine from the perspective of students house officers faculty administrators and patients and he traces the immense impact on academic medical centers of outside factors such as World War II the National Institutes of Health private medical insurance and Medicare and Medicaid Most notably the book explores the very real threats to medical education in the current environment of managed care viewing these developments not as a catastrophe but as a challenge to make many long overdue changes in medical education and medical practice Panoramic in scope meticulously researched brilliantly argued and engagingly written Time to Heal is both a stunning work of scholarship and a courageous critique of modern medical education The definitive book on the subject it provides an indispensable framework for making informed choices about the future of medical education and health care in America Frederick Novy and the Development of Bacteriology in Medicine Powel H. Kazanjian, 2017-04-30 At the turn of the twentieth century Frederick Novy was the leader among a new breed of full time bacteriologists at American medical schools Although historians have examined bacteriologic work done in American health department laboratories there has been little examination of similar work completed within U S medical schools during this period In Frederick Novy and the Development of Bacteriology in Medicine medical historian medical researcher and clinician Powel H Kazanjian uses Novy's archived letters laboratory notebooks lecture notes and published works to examine medical research and educational activities at the University of Michigan and other key medical schools during a formative period in modern medical science **Medical Education for the Future** Alan Bleakley, John Bligh, Julie Browne, 2011-02-21 The purpose of medical education is to benefit patients by improving the work of doctors

Patient centeredness is a centuries old concept in medicine but there is still a long way to go before medical education can truly be said to be patient centered Ensuring the centrality of the patient is a particular challenge during medical education when students are still forming an identity as trainee doctors and conservative attitudes towards medicine and education are common amongst medical teachers making it hard to bring about improvements How can teachers policy makers researchers and doctors bring about lasting change that will restore the patient to the heart of medical education The authors experienced medical educators explore the role of the patient in medical education in terms of identity power and location Using innovative political philosophical cultural and literary critical frameworks that have previously never been applied so consistently to the field the authors provide a fundamental reconceptualisation of medical teaching and learning with an emphasis upon learning at the bedside and in the clinic They offer a wealth of practical and conceptual insights into the three way relationship between patients students and teachers setting out a radical and exciting approach to a medical education for the future The authors provide us with a masterful reconceptualization of medical education that challenges traditional notions about teaching and learning The book critiques current practices and offers new approaches to medical education based upon sociocultural research and theory This thought provoking narrative advances the case for reform and is a must read for anyone involved in medical education David M Irby PhD Vice Dean for Education University of California San Francisco School of Medicine and co author of Educating Physicians A Call for Reform of Medical School and Residency This book is a truly visionary contribution to the Flexner centenary It is compulsory reading for the medical educationalist with a serious concern for the future and for the welfare of patients and learners in the here and now Professor Tim Dornan University of Manchester Medical School and Maastricht University Graduate School of Health Professions Education

International Handbook of Research in Medical Education Geoffrey R. Norman, Cees P.M. van der Vleuten, D.I. Newble, 2012-12-06 GEOFF NORMAN McMaster University Hamilton Canada CEES VAN DER VLEUTEN University of Maastricht Netherlands DA VID NEWBLE University of Sheffield England The International Handbook of Research in Medical Education is a review of current research findings and contemporary issues in health sciences education The orientation is toward research evidence as a basis for informing policy and practice in education Although most of the research findings have accrued from the study of medical education the handbook will be useful to teachers and researchers

in all health professions and others concerned with professional education The handbook comprises 33 chapters organized into six sections Research Traditions Learning The Educational Continuum Instructional Strategies Assessment and Implementing the Curriculum The research orientation of the handbook will make the book an invaluable resource to researchers and scholars and should help practitioners to identify research to place their educational decisions on a sound empirical footing

THE FIELD OF RESEARCH IN MEDICAL EDUCATION The discipline of medical education began in North America more than thirty years ago with the founding of the first office in medical education at Buffalo New York by George Miller in the early 1960s Soon after large offices were established in medical schools in Chicago University of Illinois Los Angeles University of Southern California and Lansing Michigan State University All these first generation offices mounted master's level programs in medical education and many of their graduates went on to found offices at other schools

Educating Physicians Molly Cooke, David M. Irby, Bridget C. O'Brien, 2010-05-05

PRAISE FOR EDUCATING PHYSICIANS *Educating Physicians* provides a masterful analysis of undergraduate and graduate medical education in the United States today It represents a major educational document based firmly on educational psychology learning theory empirical studies and careful personal observations of many individual programs It also

recognizes the importance of financing regulation and institutional culture on the learning environment which suffuses its recommendations for reform with cogency and power Most important like Abraham Flexner s classic study a century ago the report recognizes that medical education and practice at their core are profoundly moral enterprises This is a landmark volume that merits attention from anyone even peripherally involved with medical education Kenneth M Ludmerer author Time to Heal American Medical Education from the Turn of the Century to the Era of Managed Care This is a very important book that comes at a critical time in our nation s history We will not have enduring health care reform in this country unless we rethink our medical education paradigms This book is a call to arms for doing just that George E Thibault president Josiah Macy Jr Foundation The authors provide us with the evidence based model for physician education with associated changes in infrastructure policy and our roles as educators Whether you agree or not with their conclusions if you are a teacher this book is a must read as it will frame both what and how we discuss medical education throughout the current century Deborah Simpson associate dean for educational support and evaluation Medical College of Wisconsin A provocative book that provides us with a creative vision for medical education Using in depth case studies of innovative educational practices illustrating what is actually possible the authors provide sage advice for transforming medical education on the basis of learning theories and educational research Judith L Bowen professor of medicine Oregon Health Science University

Entrustable Professional Activities and Entrustment Decision-Making in Health Professions Education Olle ten Cate, Vanessa C. Burch, H. Carrie Chen, Fremien Chihchen Chou, Marije P. Hennis, 2024-10-29 This book discusses the ins and outs of a new approach to competency based education in the education and training of health professionals including doctors and medical specialists but also nurses dentists pharmacists veterinarians physiotherapists and others Embedded in a conceptual discussion of what competence in health professionals means the book discusses theoretical foundations of trust and entrustment of trainees with the practice of patient care tasks It elaborates the implications for identifying the objectives of training formulated as entrustable professional activities EPAs for the associated curriculum development for assessment of trainees in the clinical workplace for faculty development and for the management of large scale change in health professions education In the past decade EPAs have been proposed piloted or implemented in all sectors of health professions education and in countries across all continents Yet there is a widely felt desire for a better understanding of all related concepts This text was written with teachers educational managers educational scholars and health profession trainees in mind The book is the result of a collaboration of fifty highly engaged authors all actively involved in their own projects and studies around EPAs and workplace based assessment as teachers developers and managers All chapters have been critically read and commented on by internal and external reviewers making this work a state of the art document about the topic **All the Facts** James W. Cortada, 2016-03-16 This is the first national history of the role of information in the United States from the 1870s to the present It explores the use of information in the private and public sectors and in the

private lives of Americans It argues that this role of information was as important in shaping the United States as the settling of the West the creation of a nation out of immigrants and its democracy **The Wondrous Story of Anesthesia** Edmond I Eger II, Lawrence J. Saidman, Rod N. Westhorpe, 2013-09-14 Edited and written by an international who s who of more than 100 authors including anesthesiologists nurse anesthetists bench scientists a surgeon and representatives of industry this text provides a comprehensive history of anesthesia unique in its focus on the people and events that shaped the specialty around the world particularly during the past 70 years when anesthesia emerged from empiricism and developed into a science based practice **A New and Untried Course** Steven Jay Peitzman, 2000 Before 1850 the field of medicine was almost completely closed to women In 1850 a group of radical reformist male Quaker physicians and associates founded the Female Medical College of Pennsylvania to offer formal medical training to women By the 1890s under the guidance of a series of pioneering women deans the school grew into a progressive medical collegem re named the Woman s Medical College of Pennsylvania WMC This development occurred despite the stubborn and at times near violent opposition of most of the male medical community of Philadelphia **What Price Better Health?** Daniel Callahan, 2003-10-06 The idea that we have an unlimited moral imperative to pursue medical research is deeply rooted in American society and medicine In this provocative work Daniel Callahan exposes the ways in which such a seemingly high and humane ideal can be corrupted and distorted into a harmful practice Medical research with its power to attract money and political support and its promise of cures for a wide range of medical burdens has good and bad sides which are often indistinguishable In What Price Better Health Callahan teases out the distinctions and differences revealing the difficulties that result when the research imperative is suffused with excessive zeal adulterated by the profit motive or used to justify cutting moral corners Exploring the National Institutes of Health s annual budget the inflated estimates of health care cost savings that result from research the high prices charged by drug companies the use and misuse of human subjects for medical testing and the controversies surrounding human cloning and stem cell research Callahan clarifies the fine line between doing good and doing harm in the name of medical progress His work shows that medical research must be understood in light of other social and economic needs and how even the research imperative dedicated to the highest human good has its limits **History of Psychiatry and Medical Psychology** Edwin R. Wallace, John Gach, 2010-04-13 Most of the prefatory issues are extensively elaborated upon in the Prolegomenon which also contains the complete references to the texts and authors discussed below Nevertheless the Preface would be grossly incomplete without touching on some of these issues books and scholars Too many of this book s chapters e g Mora s Marx s D B Weiner s examine and reference important earlier as well as contemporary general histories of psychiatry and specialized monographs in German French Italian and Spanish Also in his 1968 Short History of Psychiatry d cussed below Ackerknecht pp xi xii references important nineteenth and earlier twentieth century psychiatric histories in English French and German Such citations will of course not be repeated here Finally thanks

to several publishers re editions of dozens of classical psychiatric texts one can consult their bibliographies as well See Prolegomenon for references to these splendid series In a rough and ready sense medical history began in classical Greece for example On Ancient Medicine While traditionally included in the Hippocratic corpus this text seems more likely to have been written by a non or even anti Hippocratic doctor Moreover the Hippocratic and other schools were hardly as secular as we now suppose On Epilepsy for example does not so much declare the prevalent denotation of it as the sacred disease erroneous as it does that it is no more nor less sacred than any other disease
