Lectin Microorganism Interactions:

Lectin-Microorganism Interactions R. Doyle, 1994-02-08 Provides in depth coverage of lectins and their interactions with micro organisms and demonstrates how lectins function as probes for viral bacterial fungal and protozoal surfaces as well as for blood group antigens

Hennecke, Desh Pal S. Verma, 2013-06-29 Research on the interaction between plants and microbes has attracted considerable attention in recent years The use of modern genetic techniques has now made possible a detailed analysis both of plant and of microbial genes involved in phytopathogenic and beneficial interactions At the biochemical level signal molecules and their receptors either of plant or of microbial origins have been detected which act in signal transduction pathways or as co regulators of gene expression We begin to understand the molecular basis of classical concepts such as gene for gene relationships hypersensitive response induced resistance to name just a few We realize and will soon exploit the tremendous potential of the results of this research for practical application in particular to protect crop plants against diseases and to increase crop yield and quality This exciting field of research which is also of truly interdisciplinary nature is expanding rapidly A Symposium series has been devoted to it which began in 1982 Recently the 5th International Symposium on the Molecular Genetics of Plant Microbe Interactions was held in Interlaken Switzerland It brought together 640 scientists from almost 30 different countries who reported their latest research progress in 47 lectures 10 short oral presentations and on over 400 high quality posters This book presents a collection of papers that comprehensively reflect the major areas under study explain novel experimental approaches currently in use highlight significant advances made over the last one or two years but also emphasize the obstacles still ahead of us

Beneficial Plant-microbial Interactions M. Belén Rodelas González, Jesús Gonzalez-López, 2016-04-19 Beneficial Plant microbial Interactions Ecology and Applications provides insight into the mechanisms underlying the interactions of plants and microbes the ecological relevance and roles of these symbioses the adaptive mechanisms of plant associated microorganisms to abiotic stress and their contribution to plant stress tolerance and the potential

Handbook of Plant Lectins Els. J. M. Van Damme, Willy J. Peumans, Arpad Pusztai, Susan Bardocz, 1998-03-06 Plant lectins are extensively used as tools and as bioactive proteins in different areas of biomedical and biological research The Handbook of Plant Lectins provides a comprehensive yet concise overview of the biochemical properties carbohydrate binding specificity biological activities and applications of most of the currently known plant lectins This handbook consists of two major sections an introductory guide and a quick reference dictionary Part I acquaints the newcomer to the lectin field with the essential information on lectins and their importance to biomedicine what are lectins their carbohydrate binding specificity effects on nutrition and immunology use in histochemistry application as therapeutic agents Part II lists approximately 200 lectin entries in alphabetical order Each entry deals with the lectins of a particular

plant and provides where known details of isolation and characterisation sugar binding specificity biological activities applications commercial availability and a bibliography Useful summary tables list lectins according to their specificity thereby allowing the user to choose the best lectin for their application A list of suppliers is also provided Handbook of Plant Lectins will be of interest to biologists and biomedical researchers studying cell biology cancer research nutrition immunology pathology and physiology

Advances in Molecular Genetics of Plant-Microbe Interactions Michael J. Daniels, J. Allan Downie, Anne E. Osbourn, 2012-12-06 Several fundamental advances were announced at the Seventh International Symposium on Molecular Plant Microbe Interactions held in Edinburgh in 1994 These included the cloning and identification of plant resistance genes involved in recognition of pathogens the description of genetically engineered plants with novel resistance to pathogens characterization of the molecular basis of pathogenicity of fungal and bacterial plant pathogens and the mechanisms of communication used during recognition between symbiotic rhizobia and their host legumes Participants in the Symposium contributed a series of papers that represent the leading edge of research in this important area of plant and microbial science These articles are brought together to form this book which will be essential reading for research workers advanced students and others interested in keeping abreast of this rapidly developing area

The Phytochemistry of Cell Recognition and Cell Surface Interactions Frank A. Loewus, 2012-12-06 Plant Carbohydrates II W. Tanner, F.A. Loewus, 2012-12-06 In 1958 a single volume in the original series of this Encyclopedia adequately summarized the state of knowledge about plant carbohydrates Expansion into two volumes in the New Series highlights the explosive increase in information and the heightened interest that attended this class of compounds in the intervening years Even now the search has just begun Much remains to be accomplished e g a full description of the plant cell wall in chemical terms Why this growing fascination with plant carbohydrates Clearly much credit goes to those who pioneered the complex chemistry of polyhydroxylated compounds and to those who later sorted out the biochemical features of these molecules But there is a second aspect the role of carbohydrates in such biological functions as host parasite and pollen pistil interactions the mating reaction in fungi symbiosis and secretion to name a few Here is ample reason for anyone concerned with the plant sciences to turn aside for a moment and consider how carbohydrates so many years neglected in favor of the study of proteins and nucleic acids contribute to the physiological processes of growth and development in plants

The Molecular Immunology of Complex Carbohydrates-3 Albert M. Wu, 2011-05-27 Based on the third symposium on Molecular Immunology of Complex Carbohydrates this text covers the latest in glycotopes structures and functions of complex carbohydrates recognition factors of lectins biomolecular interactions and other glycosciences This volume highlights the informative events of the Symposium on Molecular Immunology of Complex Carbohydrates III held at the Institute of Biological Chemistry Academia Sinica on July 15-20 2007 in Taipei Taiwan *Lectins* Nathan Sharon, H. Lis, 2007-11-03 This is the second edition of our little red book Lectins published in 1989 In the intervening years well over

10 000 articles have appeared with lectins as the main subject and more than twice as many in which they were touched upon as well as around 20 books. In particular great strides have been made in several areas of lectin research about which little was known until the late 1980s. One prominent example is animal lectins many of which have been discovered only during the last decade and the functions of several of which have been clarified especially as to their key role in innate immunity. Another is the structure of lectins and of their combining sites. Thus whereas at that time the three dimensional structures of just three lectins and a few of their complexes with sugars had been elucidated their numbers have increased to about 160 and over 200 respectively and continue to grow unabated. Updating the information on these and other topics resulted in a marked expansion of the book which is now nearly four times as long as the first edition with 226 figures and 39 tables. Still a few topics such as carbohydrate binding cytokines or bacterial toxins that are sometimes considered as lectins have been dealt with only in passing. Similarly to the first edition *Lectins II* starts with an overview of the history of lectin research.

Lectin-oral Streptococci Interactions Whingming Lee, 1996 **Hormones, Receptors and Cellular Interactions in Plants** C. M. Chadwick, D. R. Garrod, 1986-02-06. This book takes a broad look at the current status of research on receptors in higher and lower plants. It starts with a discussion of some hormone receptors auxins ethylene and gibberellin in higher plants and then considers the role of cyclic AMP and its receptors in the slime mould *Dictyostelium*.

Signal Molecules in Plants and Plant-Microbe Interactions Ben J.J. Lugtenberg, 2014-11-14. Proceedings of the NATO Advanced Research Workshop on Molecular Signals in Microbe Plant Symbiotic and Pathogenic Systems held at Biddinghuizen The Netherlands May 21-26 1989. *Plant Lectins* A. Pusztai, 1991. This volume surveys the chemistry biochemistry biosynthesis metabolism and pharmacological properties of lectins. Lectins which are most commonly found in plants are widespread natural products with striking biological activities. Their specific ability to recognise and bind to simple or complex saccharides facilitates their role as effective information protein molecules. As agents of cell to cell recognition lectins promote symbiosis between plants and specific nitrogen fixing soil bacteria. As natural defensive molecules they can protect plants against predators such as bacteria fungi and insects. As part of our diet lectins are powerful exogenous growth factors in the small intestine and influence our health the digestive function and the bacterial ecology of the alimentary tract. Lectins are also important research tools in preparative biochemistry and cell science.

Nitrogen Fixation M. Polsinelli, R. Materassi, M. Vincenzini, 2012-12-06. The Fifth International Symposium on Nitrogen Fixation with Non legumes was held in Florence Italy on 10-14 September 1990. Earlier Symposia of this series were held in Piracicaba Brazil Banf Alberta Canada Helsinki Finland and Rio De Janeiro Brazil. The Symposium's main objectives were to bring together scientists working in many different fields of nitrogen fixation to stimulate discussion on this important process and to have an appraisal of the most recent studies concerning nitrogen fixation with non legumes. The Symposium was attended by 230 scientists from 32 different countries. This volume collects the contributions of 65 lectures and 87 posters which are an up to date account of

the state of knowledge on biological nitrogen fixation with non legumes The book provides a valuable reference source not only for specialists in nitrogen fixation but also for researchers working on related aspects of agronomy biochemistry genetics microbiology molecular biology and plant physiology It is with great pleasure that we acknowledge the contributions of the authors in assuring the prompt publication of this volume We would also like to express our thanks to Kluwer Academic Publishers B V for the publication of these Proceedings M Polsinelli R Materassi M Vincenzini ORGANIZING COMMITTEE President M Polsinelli M Vincenzini Secretary F Favilli Treasurer E Galli E Gallori L Giovannetti R Materassi M P Nuti M R Tredici SCIENTIFIC COMMITTEE M Bazzicalupo Florence Italy H Bothe Cologne West Germany R H Burris Madison U S A **Experimental and Conceptual Plant Pathology** R. Plant-Microbe Interactions B.B. Biswas,H.K. Das,1998-04-30 Recent years have seen tremendous progress in unraveling the molecular basis of different plant microbe interactions Knowledge has accumulated on the mechanisms of the microbial infection of plants which can lead to either disease or resistance The mechanisms developed by plants to interact with microbes whether viruses bacteria or fungi involve events that can lead to symbiotic association or to disease or tumor formation Cell death caused by pathogen infection has been of great interest for many years because of its association with plant resistance There appear to be two types of plant cell death associated with pathogen infection a rapid hypersensitive cell death localized at the site of infection during an incompatible interaction between a resistant plant and an avirulent pathogen and a slow normosensitive plant cell death that spreads beyond the site of infection during some compatible interactions involving a susceptible plant and a virulent necrogenic pathogen Plants possess a number of defense mechanisms against infection such as i production of phytoalexin ii formation of hydrolases iii accumulation of hydroxyproline rich glycoprotein and lignin deposition iv production of pathogen related proteins v production of oligosaccharides jasmonic acid and various other phenolic substances and vi production of toxin metabolizing enzymes Based on these observations insertion of a single suitable gene in a particular plant has yielded promising results in imparting resistance against specific infection or disease It appears that a signal received after microbe infection triggers different signal transduction pathways Molecular Aspects of Plant Beneficial Microbes in Agriculture Vivek Sharma,Richa Salwan,Laith Khalil Tawfeeq Al-Ani,2020-03-10 Molecular Aspects of Plant Beneficial Microbes in Agriculture explores their diverse interactions including the pathogenic and symbiotic relationship which leads to either a decrease or increase in crop productivity Focusing on these environmentally friendly approaches the book explores their potential in changing climatic conditions It presents the exploration and regulation of beneficial microbes in offering sustainable and alternative solutions to the use of chemicals in agriculture The beneficial microbes presented here are capable of contributing to nutrient balance growth regulators suppressing pathogens orchestrating immune response and improving crop performance The book also

offers insights into the advancements in DNA technology and bioinformatic approaches which have provided in depth knowledge about the molecular arsenal involved in mineral uptake nitrogen fixation growth promotion and biocontrol attributes Covers the molecular attributes of biocontrol PGPR and mycorrhizal associations involved in the three way interaction between beneficial microbes host pathogen Explores the role of technological interventions in exploring molecular mechanisms Provides detailed and comprehensive insights about recent trends in the use of microbial genetic engineering for agricultural application Lectin in Host Defense Against Microbial Infections Shie-Liang Hsieh, 2020-03-09 This book systemically presents the latest research on lectins covering all the major topics in the field including the heterocomplex of lectins and Toll like receptors protective versus pathogenic functions in connection with microbial infections and novel strategies for enhancing host immunity against infectious diseases caused by viruses bacteria and fungi Lectins are a large group of glycan binding proteins that recognize diverse glycan and non glycan structures expressed on prokaryotic and eukaryotic cells and are vital to cell cell interactions the attachment of microbes to host cells and the recognition and activation of immune responses to exogenous and endogenous danger signals The composition and structure of microbes are complex and include numerous pathogen associated molecular patterns or damage associated molecular patterns As such microbes interactions with immune cells activate multiple innate immunity receptors and produce distinct inflammatory reactions which can be protective to contain microbial invasion or pathogenic to cause tissue damage and shock syndrome in the host The book shares lessons learned from state of the art research in this field highlights the latest discoveries and provides insightful discussions on lectin mediated inflammatory reactions while also outlining future research directions
