

PRESTRESSED CONCRETE DESIGN

Lecture 1 – Introduction to Prestressed Concrete Structures

Principles of Prestressed Concrete

- In a reinforced concrete beam subject to bending, the tensile zone cracks and all the tensile resistance is provided by the reinforcement.

- Stress that may be permitted in the reinforcement is limited only by the need to keep the cracks in concrete to acceptable widths under working conditions (thus no need for use of very high strength steels which are available)
- Design is therefore uneconomic in 2 respects:
 - Dead weight includes 'useless' concrete in the tensile zone
 - Economic use of steel resources is not possible
- 'Prestressing' means artificial creation of stresses in the structure before loading, so that the stresses which then exist under loading are more favourable/efficient.
- As concrete is strong in compression the material in a beam will be used most efficiently if it can be maintained in a state of compression throughout.
- Presence of a longitudinal compressive force acting on a concrete beam may therefore be overcome the disadvantage of reinforced concrete listed above.
- Not only is the concrete fully utilised, but the need for conventional tension reinforcement is removed.
- The compressive strength is usually provided by tensioned steel wires or strands which are anchored against the concrete and, since the stress in this steel is not an important factor in the behaviour of the beam but merely a means of applying the appropriate force, full advantage may be made of very high strength steels.

- The way in which the stresses due to bending and an applied compressive source may be combined is demonstrated in pic. In the case of an axially applied force acting over the length of a beam, the stress distribution at any section will be equal to sum of the compression and bending stresses.
- It is therefore possible to determine the applied force so that the combined stresses are always compressive.

Transactions and Notes of the Concrete Institute, 1956 Post-Tensioned Concrete: Principles and Practice, Third Edition K. Dirk Bondy, Bryan Allred, 2017-08-08 The book combines history with academic notes for use at the university level presenting design examples from actual jobs with applications and detailing for the practicing engineer Chapter 1 tells the history of post tensioned concrete as only Ken Bondy can tell it Chapters 2 8 are the notes Dirk Bondy uses to teach Design of Prestressed Concrete Structures at UCLA and Cal Poly San Luis Obispo Chapters 9 13 are design examples that address many of the decisions faced by practicing engineers on typical projects Chapters 13 14 cover the art of detailing and observing the construction of post tensioned concrete This knowledge was obtained over many years of working on our own projects and listening and learning from the the pioneers of post tensioned concrete Chapter 15 covers the slab on grade industry which represents more sales of post tensioning tendons than all other post tensioning applications combined Chapter 16 discusses the challenging application of post tensioning external post tensioning *Engineering Dynamics and Vibrations* Junbo Jia, Jeom Kee Paik, 2018-12-12 Engineering dynamics and vibrations has become an essential topic for ensuring structural integrity and operational functionality in different engineering areas However practical problems regarding dynamics and vibrations are in many cases handled without success despite large expenditures This book covers a wide range of topics from the basics to advances in dynamics and vibrations from relevant engineering challenges to the solutions from engineering failures due to inappropriate accounting of dynamics to mitigation measures and utilization of dynamics It lays emphasis on engineering applications utilizing state of the art information *Earthquake Engineering Research Center Library Printed Catalog* University of California, Berkeley. Adamson,2013 While architects have been the subject of many scholarly studies we know very little about the companies that built the structures they designed This book is a study in business history as well as civil engineering and construction management It details the contributions that Charles J Pankow a 1947 graduate of Purdue University and his firm have made as builders of large often concrete commercial structures since the company s foundation in 1963 In particular it uses selected projects as case studies to analyze and explain how the company innovated at the project level The company has been recognized as a pioneer in design build a methodology that involves the construction company in the development of structures and substitutes negotiated contracts for the bidding of architects plans The Pankow companies also developed automated construction technologies that helped keep projects on time and within budget The book includes dozens of photographs of buildings under construction from the company s archive and other sources At the same time the author analyzes and evaluates the strategic decision making of the firm through 2004 the year in which the founder died While Charles Pankow figures prominently in the narrative the book also describes how others within the firm adapted the business so that the company could survive a commercial market that changed significantly as a result of the recession of the 1990s Extending beyond the scope of most business biographies this book is a study in industry innovation and the power of corporate culture as well as the story of one particular company and the individuals who created it *Catalog of Copyright Entries. Karbhari,2008

The use of prefabricated fiber reinforced polymer FRP strips to rehabilitate concrete structures has increased in popularity over the past few years As such many design codes and guidelines have been developed to enable designers to use the FRP materials with confidence in their performance In this work FRP durability test results are used with a widely known degradation prediction model to determine the value of FRP material properties used in rehabilitation and strengthening of concrete over time Equations are presented based on the test data to predict the tensile strength tensile modulus short beam shear strength and flexural strength over time of FRP prefabricated strips from three manufacturers Corresponding degradation data is presented for the adhesive recommended by each manufacturer for use The degradation model is used on example girders used in previous research by Atadero and Karbhari 1996 for illustration of differences in the codes and guidelines design property values and those possessed by FRP materials over time to demonstrate the use of the time based reliability factor within the LRFD model presented in an earlier report to Caltrans A reliability analysis is conducted in each example case to compare the results A proposed shift in design philosophy is presented to enable inclusion of material degradation over time and thereby make concrete rehabilitation with FRP strips more efficient and cost effective
