Ten Lectures on Language, Culture and Mind Chris Sinha, 2017-08-28 In this interdisciplinary collection of lectures Chris Sinha presents an overview of topics ranging from language in children's play through cultural conceptualizations of time to philosophical and linguistic relativism. The intertwining of the evolutionary and individual time scales of human development is a key theme unifying the lectures, as is the fundamentally cultural nature of language and cognition. Familiar topics in cognitive linguistics such as spatial semantics and conceptual blending are addressed from these cultural, comparative and developmental perspectives. Chris Sinha also discusses the psychological roots of key concepts in cognitive linguistics and sets out a biocultural approach to language evolution.

**Samson Abramsky on Logic and Structure in Computer Science and Beyond** Alessandra Palmigiano, Mehrnoosh Sadrzadeh, 2023-08-01 Samson Abramsky's wide-ranging contributions to logical and structural aspects of Computer Science have had a major influence on the field. This book is a rich collection of papers inspired by and extending Abramsky's work. It contains both survey material and new results, organised around six major themes: domains and duality, game semantics, contextuality and quantum computation, comonads and descriptive complexity, categorical and logical semantics and probabilistic computation. These relate to different stages and aspects of Abramsky's work, reflecting its exceptionally broad scope and his ability to illuminate and unify diverse topics. Chapters in the volume include a review of his entire body of work, spanning from philosophical aspects to logic programming, language theory, quantum theory, economics and psychology, and relating it to a theory of unification of sciences using dual adjunctions. The section on game semantics shows how Abramsky's work has led to a powerful new paradigm for the semantics of computation. The work on contextuality and categorical quantum mechanics has been highly influential and provides the foundation for increasingly widely used methods in quantum computing. The work on comonads and descriptive complexity is building bridges between currently disjoint research areas in computer science, relating Structure to Power. The volume also includes a scientific autobiography and an overview of the contributions. The outstanding set of contributors to this volume, including both senior and early career academics, serve as testament to Samson Abramsky's enduring influence. It will provide an invaluable and unique resource for both students and established researchers.

**Hegel, Kant and the Structure of the Object** Robert Stern,2002-09-11 Hegel s holistic metaphysics challenges much recent ontology with its atomistic and reductionist assumptions Stern offers us an original reading of Hegel and contrasts him with his predecessor Kant *Kant, Kantianism, and Idealism* Thomas Nenon,2014-09-19 Kant Kantianism and Idealism presents an overview of German Idealism the major movement in philosophy from the late 18th to the middle of the 19th Century The period was dominated by Kant Fichte Schelling and Hegel whose work influenced not just philosophy but also art theology and politics The volume covers not only these major figures but also their main followers and interpreters These include Kant s younger contemporary Herder his early critics such as Jacobi Reinhold and Maimon and his readers Schiller and Schlegel who shaped much of the subsequent reception of Kant in art literature and aesthetics as well as Schopenhauer whose unique appropriation and criticism of theories of cognition later had a decisive influence on Nietzsche The Young Hegelians such as Bruno Bauer Ludwig Feuerbach and David Friedrich Strauss whose writings would influence Engels and Marx are also discussed The influence of Kant and German Idealism also extended into France shaping the thought of such figures as Saint Simon Fourier and Proudhon whose work would prove decisive for subsequent philosophical political and economic thinking in Europe in the second half of the 19th century [Newton's Physics and the Conceptual Structure of the Scientific Revolution](#) Z. Bechler,2012-12-06 Three events which happened all within the same week some ten years ago set me on the track which the book describes The first was a reading of Emile Meyerson works in the course of a prolonged research on Einstein s relativity theory which sent me back to Meyerson s *Identity and Reality* where I read and reread the striking chapter on Irrationality In my earlier researches into the origins of French Conventionalism I came to know similar views all apparently deriving from Emile Boutroux s doctoral thesis of 1874 *De la contingence des lois de la nature* and his notes of the 1892-3 course he taught at the Sorbonne *De l'idée de la loi naturelle dans la science et la philosophie contemporaines* But never before was the full effect of the argument so suddenly clear as when I read Meyerson On the same week I read by sheer accident Ernest Moody s two parts paper in the *JHIOF* 1951 Galileo and Avempace Put near Meyerson s thesis what Moody argued was a striking confirmation it was the sheer irrationality of the Platonic tradition leading from Avempace to Galileo which was the working conceptual force behind the notion of a non appearing nature active all the time but

always sub merged as it is embodied in the concept of void and motion in it

**New Perspectives on Neo-Kantianism and the Sciences** Helmut Pulte, Jan Baedke, Daniel Koenig, Gregor Nickel, 2024-07-05 This volume considers the exchange between the Neo Kantian tradition in German philosophy and the sciences from the last third of the nineteenth century to the Great war and partly beyond During this period various scientific disciplines underwent modernisation processes characterised by an increasing empirical inclination and a decline in the influence of metaphysics the pluralisation of theories and the historical and pragmatic revitalisation of scientific claims against philosophy The various contributions look at the ways in which a certain Kantian orthodoxy was influenced by these new developments and whether and how itself had some impact on the development of the sciences The volume is not limited to the exact sciences of mathematics and physics which are particularly important for the Kantian tradition but also takes into account less recognised disciplines such as biology chemistry technology and psychology It is complemented by contributions that contrast Neo Kantianism with other scientific philosophies of the period in question

*Experience, Reality, and Scientific Explanation* Maria Carla Galavotti,A. Pagnini,2013-03-09 The papers collected here comprise the proceedings of a

Workshop in honor of Merrilee and Wes Salmon held in Florence on May 17-18, 1996. The aim of the meeting was to pay homage to these two American scholars whose contact with Italian and European Universities and Institutes had a major influence on Continental thought in the field of epistemology and probability. In fact, Merrilee and Wes spent various periods lecturing at the Universities of Bologna, Florence, Rome, Trieste, Catania, and Pisa, as well as in the University of Constance, where they helped to build a strong cultural bridge with the Pittsburgh Center for the Philosophy of Science. The Florence Center for the History and Philosophy of Science is particularly thankful to the Salmons for their ongoing cooperation and frequent visits. We must not forget that Wes Salmon was in the Florence Center and at the Philosophy Department of Florence as a visiting scholar on many occasions and that he made important contributions which have later appeared in Italian journals such as *Iride* and *Rivista di filosofia*. Merrilee was a speaker at the Conference on Genetics, Linguistics, and Archaeology, May 20-24, 1991, organized by the Florence Center. Both Wes and Merrilee often enlivened the arguments of the initiatives they took part in.

*The History of Religious Imagination in Christian Platonism* Christian Hengstmann, 2021-03-25. This collection provides the first in-depth introduction to the theory of the religious imagination put forward by renowned philosopher Douglas Hedley from his earliest essays to his principal writings. Featuring Hedley's inaugural lecture delivered at Cambridge University in 2018, the book sheds light on his robust concept of religious imagination as the chief power of the soul's knowledge of the Divine and reveals its importance in contemporary metaphysics, ethics, and politics. Chapters trace the development of the religious imagination in Christian Platonism from Late Antiquity to British Romanticism, drawing on Origen, Henry More, and Samuel Taylor Coleridge, before providing a survey of alternative contemporary versions of the concept as outlined by Karl Rahner, René Girard, and William P. Alston, as well as within Indian philosophy. By bringing Christian Platonist thought into dialogue with contemporary philosophy and theology, the volume systematically reveals the relevance of Hedley's work to current debates in religious epistemology and metaphysics. It offers a comprehensive appraisal of the historical contribution of imagination to religious understanding and, as such, will be of great interest to philosophers, theologians, and historians alike.
