

SHELL PLATE PARTS LIST

When changing calibers that use a different primer size, we recommend changing the entire shell plate carrier. If caliber uses the same primer size, you can easily change just the shell plate.

ZERO ADJUSTMENT FOR SHELL PLATE INDEXING

With the turret installed, raise and lower the shell plate carrier. If the shell plate does not index to the proper spot, turn the adjusting screw clockwise; the shell plate should move. If not—raise and lower the ram again to engage the ratchet. Keep turning until the shell plate snaps into place; then turn an additional 1/2 to 3/4 turn.

Confirm the zero adjust is set properly. With the carrier in the down position, try turning the shell plate clockwise; there should be no movement. If there is, rotate the zero adjust screw a fraction of a turn clockwise to remove all free play.

This need only be done once. If the shell plate gets out of adjustment because of a short stroke or jam, simply advance the shell plate by hand, not the adjusting screw.
