*Fundamentals of Building Construction* Edward Allen,Joseph Iano,2013-10-03 Note from the publisher Now in its sixth edition this bestselling reference focuses on the basic materials and methods used in building construction Emphasizing common construction systems such as light wood frame masonry bearing wall steel frame and reinforced concrete construction the new edition includes new information on building materials properties the latest on pre engineered building components and sustainability issues and reflects the latest building codes and standards It also features an expanded series of case studies along with more axonometric detail drawings and revised photographs for a thoroughly illustrated approach Sustainable Construction Materials and Technologies Yoon-Moon Chun,Peter Claisse,Tarun R.

Naik, Eshmaiel Ganjian, 2020-11-26 The construction materials industry is a major user of the world's resources. While enormous progress has been made towards sustainability, the scope and opportunities for improvements are significant. To further the effort for sustainable development, a conference on Sustainable Construction Materials and Technologies was held at Coventry University, Coventry, U.K. from June 11th-13th, 2007, to highlight case studies and research on new and innovative ways of achieving sustainability of construction materials and technologies. This book presents selected important contributions made at the conference. Over 190 papers from over 45 countries were accepted for presentation at the conference, of which approximately 100 selected papers are published in this book. The rest of the papers are published in two supplementary books. Topics covered in this book include sustainable alternatives to natural sand, stone, and Portland cement in concrete; sustainable use of recyclable resources such as fly ash, ground municipal waste slag, pozzolan, rice husk ash, silica fume, gypsum, plasterboard, drywall, and lime in construction; sustainable mortar, concrete, bricks, blocks, and backfill; the economics and environmental impact of sustainable materials and structures; use of construction and demolition wastes and organic materials; straw bale, hemp, etc. in construction; sustainable use of soil, timber, and wood products; and related sustainable construction and rehabilitation technologies.
