Legally Poisoned How The Law Puts Us At Risk From Toxicants:

Legally Poisoned Carl F. Cranor, 2011-02-15 Cosmetic ingredients industrial chemicals pesticides and other compounds enter our bodies and remain briefly or permanently Far too many suspected toxic hazards are unleashed every day that affect the development and function of our brain immune system reproductive organs or hormones But no public health law requires product testing of most chemical compounds before they enter the market If products are deemed dangerous toxicants must be forcibly reduced or removed but only after harm has been done **Legally Poisoned** Carl F.

Cranor, 2013-03-11 Take a random walk through your life and you ll find it is awash in industrial often toxic chemicals Sip water from a plastic bottle and ingest bisphenol A Prepare dinner in a non stick frying pan or wear a layer of Gore Tex only to be exposed to perfluorinated compounds Hang curtains clip your baby into a car seat watch television all are manufactured with brominated flame retardants Cosmetic ingredients industrial chemicals pesticides and other compounds enter our bodies and remain briefly or permanently Far too many suspected toxic hazards are unleashed every day that affect the development and function of our brain immune system reproductive organs or hormones But no public health law requires product testing of most chemical compounds before they enter the market If products are deemed dangerous toxicants must be forcibly reduced or removed but only after harm has been done In this scientifically rigorous legal analysis Carl Cranor argues that just as pharmaceuticals and pesticides cannot be sold without pre market testing other chemical products should be subject to the same safety measures Cranor shows in terrifying detail what risks we run and that it is entirely possible to design a less dangerous commercial world *A Tapestry of Values* Kevin C. Elliott, 2017-01-02 The role of values in scientific research has become an important topic of discussion in both scholarly and popular debates Pundits across the political spectrum worry that research on topics like climate change evolutionary theory vaccine safety and genetically modified foods has become overly politicized At the same time it is clear that values play an important role in science by limiting unethical forms of research and by deciding what areas of research have the greatest relevance for society Deciding how to distinguish legitimate and illegitimate influences of values in scientific research is a matter of vital importance Recently philosophers of science have written a great deal on this topic but most of their work has been directed toward a scholarly audience This book makes the contemporary philosophical literature on science and values accessible to a wide readership It examines case studies from a variety of research areas including climate science anthropology chemical risk assessment ecology neurobiology biomedical research and agriculture These cases show that values have necessary roles to play in identifying research topics choosing research questions determining the aims of inquiry responding to uncertainty and deciding how to communicate information Kevin Elliott focuses not just on describing roles for values but also on determining when their influences are actually appropriate He emphasizes several conditions for incorporating values in a legitimate fashion and highlights multiple strategies for fostering engagement between stakeholders so that value influences can be subjected to

Science and the Production of Ignorance Janet Kourany, Martin Carrier, 2020-02-18 An introduction to the new area of ignorance studies that examines how science produces ignorance both actively and passively intentionally and unintentionally We may think of science as our foremost producer of knowledge but for the past decade science has also been studied as an important source of ignorance The historian of science Robert Proctor has coined the term agnotology to refer to the study of ignorance and much of the ignorance studied in this new area is produced by science Whether an active or passive construct intended or unintended this ignorance is in Proctor s words made maintained and manipulated by science This volume examines forms of scientific ignorance and their consequences A dialogue between Proctor and Peter Galison offers historical context presenting the concerns and motivations of pioneers in the field Essays by leading historians and philosophers of science examine the active construction of ignorance by biased design and interpretation of experiments and empirical studies as seen in the false advertising by climate change deniers the virtuous construction of ignorance for example by curtailing research on race and gender related cognitive differences and ignorance as the unintended by product of choices made in the research process when rules incentives and methods encourage an emphasis on the beneficial and commercial effects of industrial chemicals and when certain concepts and even certain groups interests are inaccessible in a given conceptual framework Contributors Martin Carrier Carl F Cranor Peter Galison Paul Hoyningen Huene Philip Kitcher Janet Kourany Hugh Lacey Robert Proctor Londa Schiebinger Miriam Solomon Torsten Wilholt **The Law and Ecology of**
