**Brick and Block Masonry** Claudio Modena, F. da Porto, M.R. Valluzzi, 2016-11-03 Brick and Block Masonry Trends Innovations and Challenges contains the lectures and regular papers presented at the 16th International Brick and Block Masonry Conference Padova Italy 26-30 June 2016. The contributions cover major topics: Analysis of masonry structures; Bond of composites to masonry; Building physics and durability; Case studies; Codes and standards; Conservation of historic buildings; Earthen constructions; Eco materials and sustainability; Fire resistance; Blasts and impacts; Masonry bridges, arches and vaults; Masonry infill walls and RC frames; Masonry materials and testing; Masonry repair and strengthening; New construction techniques and technologies; Reinforced and confined masonry; Seismic performance and vulnerability assessment. In an ever-changing world in which innovations are rapidly implemented but soon surpassed, the challenge for masonry, the oldest and most traditional building material, is that it can address the increasingly pressing requirements of quality of living, safety and sustainability. This abstracts volume and full paper USB device focusing on challenges, innovations, trends and ideas related to masonry in both research and building practice will prove to be a valuable source of information for researchers and practitioners, masonry industries and building management authorities, construction professionals and educators.

**INNOVATIONS TECHNOLOGIES IN SCIENCE AND PRACTICE**, 2022-02-15 Proceedings of the VI International Scientific and Practical Conference *Structure from Motion in the Geosciences* Jonathan L. Carrivick, Mark W. Smith, Duncan J. Quincey, 2016-07-15 Structure from Motion with Multi View Stereo provides hyperscale landform models using images acquired from standard compact cameras and a network of ground control points. The technique is not limited in temporal frequency and can provide point cloud data comparable in density and accuracy to those generated by terrestrial and airborne laser scanning at a fraction of the cost. It therefore offers exciting opportunities to characterise surface topography in unprecedented detail and with multi-temporal data to detect elevation position and volumetric changes that are symptomatic of earth surface processes. This book firstly places Structure from Motion in the context of other digital surveying methods and details the Structure from Motion workflow including available software packages and assessments of uncertainty and accuracy. It then critically reviews current usage of Structure from Motion in the geosciences, provides a synthesis of recent validation studies and looks to the future by highlighting opportunities arising from developments in allied disciplines. This book will appeal to academics, students and industry professionals because it balances technical knowledge of the Structure from Motion workflow with practical guidelines for image acquisition, image processing and data quality assessment and includes case studies that have been contributed by experts from around the world.

*Structural Analysis of Historical Constructions: Anamnesis, Diagnosis, Therapy, Controls* Koen Van Balen, Els Verstrynghe, 2016-11-03 Structural Analysis of Historical Constructions: Anamnesis, diagnosis, therapy, controls contains the papers presented at the 10th International Conference on Structural Analysis of Historical Constructions SAHC2016 Leuven Belgium 13-15

September 2016 The main theme of the book is Anamnesis Diagnosis Therapy Controls which emphasizes the importance of all steps of a restoration process in order to obtain a thorough understanding of the structural behaviour of built cultural heritage The contributions cover every aspect of the structural analysis of historical constructions such as material characterization structural modelling static and dynamic monitoring non destructive techniques for on site investigation seismic behaviour rehabilitation traditional and innovative repair techniques and case studies A special focus has been put on six specific themes Innovation and heritage Preventive conservation Computational strategies for heritage structures Sustainable strengthening of masonry with composites Values and sustainability and Subsoil interaction The knowledge insights and ideas in Structural Analysis of Historical Constructions Anamnesis diagnosis therapy controls make this book of abstracts and the corresponding digital full colour conference proceedings containing the full papers must have literature for researchers and practitioners involved in the structural analysis of historical constructions *Beyond Digital Representation*

Andrea Giordano,Michele Russo,Roberta Spallone,2023-09-01 This book collects contributions which showcase the impact of new augmented reality AR and artificial intelligence AI technologies considered jointly in the fields of cultural heritage and innovative design AR is an alternative path of analysis and communication if applied to several fields of research in particular if related to space and artifacts in it This happens because the neural network development strengthens the relationship between augmented reality and artificial intelligence creating processes close to human thought in shorter times In the last years the AR AI expansion and the future scenarios have raised a deep trans disciplinary speculation The disciplines of representation drawing surveying visual communication as a convergence place of multidisciplinary theoretical and applicative studies related to architecture city environment tangible and intangible cultural heritage are called to contribute to the international debate The book chapters deal with augmented reality and artificial intelligence analyzing their connections as research tools for knowing the environment In particular the topics focus on the intersection between real and virtual world and on the heuristic role of drawing in the enhancement and management of cultural heritage in planning and monitoring the architecture the environment or the infrastructures Scientists involved in AR and AI research applied separately or together in the field of cultural heritage architectural design urban planning and infrastructures analysis as well as members of public and private organizations make up interdisciplinary groups that fuel the discussion focusing on the priorities and aims of the research related to the disciplines of representation **Progress in Cultural Heritage**

**Structures and Architecture** Paulo J. Cruz, 2016-10-14 Although the disciplines of architecture and structural engineering have both experienced their own historical development their interaction has resulted in many fascinating and delightful structures To take this interaction to a higher level there is a need to stimulate the inventive and creative design of architectural structures and to persuade architects and structural engineers to further collaborate in this process exploiting together new concepts applications and challenges This set of book of abstracts and full paper searchable CD ROM presents selected papers presented at the 3rd International Conference on Structures and Architecture Conference ICSA2016 organized by the School of Architecture of the University of Minho Guimar es Portugal July 2016 to promote the synergy in

the collaboration between the disciplines of architecture and structural engineering

**Analysis, Conservation, and Restoration of Tangible and Intangible Cultural Heritage** Inglese, Carlo, Ippolito, Alfonso, 2018-10-12 Communities have witnessed a fundamental shift in the ways they interact with heritage sites Much of this change has been driven by the rapid democratization and widespread adoption of enabling technologies As expediency is embraced in the collection and analysis of data there may also be a certain amount of intimacy lost with both the tangible and intangible vestiges of the past Analysis Conservation and Restoration of Tangible and Intangible Cultural Heritage is a collection of innovative research on the quantitative methods and digital workflows transforming cultural heritage There is no contesting the value of advanced non destructive diagnostic imaging techniques for the analysis of heritage structures and objects Highlighting topics including 3D modeling conservation and digital surveying this book is ideally designed for conservation and preservation specialists archaeologists anthropologists historians academicians and students seeking current research on data driven evidence based decision making to improve intervention outcomes

*Using Scanning Lasers for Real-time Pavement Thickness Measurement*, 2006 Due to limited budgets and reduced inspection staff state departments of transportation DOTs are in need of innovative approaches for providing more efficient quality assurance on concrete paving projects The goal of this research was to investigate and test new methods that can determine pavement thickness in real time Three methods were evaluated laser scanning ultrasonic sensors and eddy current sensors Laser scanning which scans the surface of the base prior to paving and then scans the surface after paving can determine the thickness at any point Also scanning lasers provide thorough data coverage that can be used to calculate thickness variance

accurately and identify any areas where the thickness is below tolerance Ultrasonic and eddy current sensors also have the potential to measure thickness nondestructively at discrete points and may result in an easier method of obtaining thickness There appear to be two viable approaches for measuring concrete pavement thickness during the paving operation laser scanning and eddy current sensors Laser scanning has proved to be a reliable technique in terms of its ability to provide virtual core thickness with low variability Research is still required to develop a prototype system that integrates point cloud data from two scanners Eddy current sensors have also proved to be a suitable alternative and are probably closer to field implementation than the laser scanning approach As a next step for this research project it is suggested that a pavement thickness measuring device using eddy current sensors be created which would involve both a handheld and paver mounted version of the device
