Leica Viva Ts15 User Manual:

Disaster Robotics Satoshi Tadokoro, 2019-01-20 This book introduces readers to the latest findings on disaster robotics. It is based on the ImPACT Tough Robotics Challenge, a national project spearheaded by the Japan Cabinet Office that focuses on developing robotics technologies to aid in disaster response, recovery, and preparedness. It presents six subprojects that involve robot platforms and several component technologies used in conjunction with robots: cyber rescue canines which are digitally empowered rescue dogs, serpent-like robots for searching debris, serpent-like robots for plant infrastructure inspection, UAVs for gathering information on large areas struck by disaster, legged robots for plant infrastructure inspection in risky places, and construction robots for recovery tasks that require both power and precision. The book offers a valuable source of information for researchers, engineers, and practitioners in safety, security, and rescue robotics, disaster robotics, and plant and infrastructure maintenance. It will also appeal to a wider demographic including students and academics as it highlights application scenarios and the total concept for each robot in various scientific and technical contexts. In addition to a wealth of figures and photos that explain these robots and systems, as well as experimental data, the book includes a comprehensive list of published papers from this project for readers to refer to. Lastly, an external website offers video footage and updated information from the International Rescue System Institute.

Advances in Information Technology in Civil and Building Engineering Adel Francis, Edmond Miresco, Silvio Melhado, 2025-03-29 This book gathers the latest advances, innovations, and applications in the field of information technology in civil and building engineering presented at the 20th International Conference on Computing in Civil and Building Engineering (ICCCBE) held in Montreal, Canada, on August 25-28, 2024. It covers highly diverse topics such as BIM, construction information modeling, knowledge management, GIS, GPS, laser scanning, sensors, monitoring, VR, AR, computer-aided construction, product and process modeling, big data, and IoT, cooperative design, mobile computing, simulation, structural health monitoring, computer-aided structural control and analysis, ICT in geotechnical engineering, computational mechanics, asset management, maintenance, urban planning, facility management, and smart cities. Written by leading researchers and engineers and selected by means of a rigorous international peer review process, the contributions highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaborations.

Surveying for Civil and Mine Engineers John Walker, Joseph Awange, 2020-06-06 This updated and expanded edition of the book includes four additional chapters on earthwork on sloping sites, transitional curves, and super-elevation calculations of super-elevations on composite curves and underground mine surveying. Richly illustrated with diagrams, equations, and tables, as well as examples of every-day survey tasks, it also covers new topics such as the global navigation satellite system's Real Time Kinematic (RTK), which are increasingly used in a wide range of everyday engineering applications.
