**and Materials for Disease Modeling and Regenerative Medicine** Ander Abarrategi,Senentxu Lanceros-Mendez,2021-05-05 Materials science and engineering are strongly developing tools with increasing impact in the biotechnological and biomedical areas Interestingly research in molecular and cellular biology is often at the core of the design and development of materials based approaches providing biological rationale Focused on research relying on biology materials interaction IJMS launched a Special Issue named Cells and Materials for Disease Modeling and Regenerative Medicine The aim of the Special Issue was to generate a compilation of in vitro and in vivo strategies based on cell material interactions This book compiles the papers published in that Special Issue and includes a selection of six original scientific experimental articles and six comprehensive reviews We are convinced that this collection of articles shows representative examples of the state of the art in the field unveiling the relevance of materials research in generating new regenerative medicine and disease modeling approaches *Ionizing Radiation and Human Health: A Multifaceted Relationship* Lorenzo

Manti,Dörthe Schaue,Nobuyuki Hamada,2022-01-07 **Physico-Chemical Control of Cell Function** Cesare Gargioli,Giancarlo Forte,Alberto Rainer,2019-10-17 Extracellular Matrix ECM has been considered for a long time merely a scaffold sustaining cell and tissue function Despite this simplistic view shared by many nowadays ECM and their mechanic physical and chemical characteristic acquired a progressive larger role actively regulating cell life survival proliferation gene expression and differentiation The interplay between cells and the ECM is continuously controlled at the cell level in a dynamic way While cells synthesize the raw components of the ECM this in turn impacts on cell function by providing chemical topographical and mechanical hints Such stimuli have been proven to control several aspects of cell function including survival proliferation differentiation and migration The molecular pathways activated by cells in response to the physical cues arising from the ECM are being disclosed and thus the possibility to control cell function through materials design is becoming more realistic Current in vitro protocols relying in 2D cell culture system entail reductionist approaches

to the complexity of cell ECM interaction and result in cells rapidly losing their distinctive functions in culture Understanding and replicating the 3D microenvironmental cues affecting cell function appears as a mandatory requirement for the development of next generation biomaterials as well as for the establishment of more physiologically relevant and predictive in vitro models of diseases Such an effort will require a multidisciplinary approach at the convergence of biophysics biology nanotechnology and bioengineering

**Volume 28** Eva Morava, Matthias Baumgartner, Marc Patterson, Shamima Rahman, Johannes Zschocke, Verena Peters, 2016-07-05 JIMD Reports publishes case and short research reports in the area of inherited metabolic disorders Case reports highlight some unusual or previously unrecorded feature relevant to the disorder or serve as an important reminder of clinical or biochemical features of a Mendelian disorder Role of Protein-Protein Interactions in Metabolism: Genetics, Structure, Function, 2nd Edition Amit V. Pandey, Colin J. Henderson, Yuji Ishii, Michel Kranendonk, Wayne L. Backes, Ulrich M. Zanger, 2018-06-20 Genetic variations may change the structure and function of individual proteins as well as affect their interactions with other proteins and thereby impact metabolic processes dependent on protein protein interactions For example cytochrome P450 proteins which metabolize a vast array of drugs steroids and other xenobiotics are dependent on interactions with redox and allosteric partner proteins for their localization stability catalytic function and metabolic diversity reactions Genetic variations may impact such interactions by changing the splicing and or amino acid sequence which in turn may impact protein topology localization post translational modifications and three dimensional structure More generally research on single gene defects and their role in disease as well as recent large scale sequencing studies suggest that a large number of genetic variations may contribute to disease not only by affecting gene function or expression but also by modulating complex protein interaction networks The aim of this research topic is to bring together researchers working in the area of drug steroid and xenobiotic metabolism who are studying protein protein interactions to describe their recent advances in the field We are aiming for a comprehensive analysis of the subject from different approaches including genetics

proteomics transcriptomics structural biology biochemistry and pharmacology Of particular interest are papers dealing with translational research describing the role of novel genetic variations altering protein protein interaction Authors may submit original articles reviews and opinion or hypothesis papers dealing with the role of protein protein interactions in health and disease Potential topics include but are not limited to Role of protein protein interactions in xenobiotic metabolism by cytochrome P450s and other drug metabolism enzymes Role of classical and novel interaction partners for cytochrome P450 dependent metabolism which may include interactions with redox partners interactions with other P450 enzymes to form P450 dimers multimers P450 UGT interactions and proteins involved in posttranslational modification of P450s Effect of genetic variations mutations and polymorphisms on metabolism affected by protein protein interactions Structural implications of mutations and polymorphisms on protein protein interactions Functional characterization of protein protein interactions Analysis of protein protein interaction networks in health and disease Regulatory mechanisms governing metabolic processes based on protein protein interactions Experimental approaches for identification of new protein protein interactions including changes caused by mutations and polymorphisms

Regulatory RNAs in the Nervous System, 2nd Edition Tommaso Pizzorusso,Alessandro Cellerino,Laure

Bally-Cuif,2018-11-13 Until about a decade ago the non coding part of the genome was considered without function RNA

sequencing studies have shown however that a considerable part of the non coding genome is transcribed and that these non coding RNAs nc RNAs can regulate gene expression Almost on weekly basis new findings reveal the regulatory role of nc RNAs exert in many biological processes Overall these studies are making increasingly clear that both in model organisms and in humans complexity is not a function of the number of protein coding genes but results from the possibility of using combinations of genetic programs and controlling their spatial and temporal regulation during development senescence and in disease by regulatory RNAs This has generated a novel picture of gene regulatory networks where regulatory nc RNAs represent novel layers of regulation Particularly well characterized is the role of microRNAs miRNAs small nc RNAs that bind to mRNAs and regulate gene expression after transcritpion This message is particularly clear in the nervous system where miRNAs have been involved in regulating cellular pathways controlling fundamental functions during development synaptic plasticity and in neurodegenerative disease It has also been shown that neuronal miRNAs are tightly regulated by electrical activity at the level of transcription biogenesis stability and specifically targeted to dendrites and synapses Dereglulation of expression of miRNAs is proposed not only as potential disease biomarker but it has been implicated directly in the pathogenesis of complex neurodegenerative disease This so called RNA revolution also lead to the exploitation of RNA

interference and the development of related tools as potential treatment of a vast array of CNS disease that could benefit from regulation of disease associated genes In spite of these advancements the relatively young age of this field together with the inherent high molecular complexity of RNA regulation of biological processes have somewhat hindered its communication to the whole of the neuroscience community This Research Topic aims at improving this aspect by putting around the same virtual table scientists covering aspects ranging from basic molecular mechanisms of regulatory RNAs in the nervous system to the analysis of the role of specific regulatory RNAs in neurobiological processes of development plasticity and aging Furthermore we included papers analyzing the role of regulatory RNAs in disease models from neuromuscular to higher cognitive functions and more technically oriented papers dealing with new methodologies to study regulatory RNA biology and its translational potential

Nanotoxicology in Safety Assessment of Nanomaterials Henriqueta Louro, Maria João Silva, 2022-05-18 Since its advent nanotechnologies are considered key enabling technologies that take advantage of a wide array of nanomaterials NMs for biomedical and industrial applications generating significant societal and economic benefits However such innovation increases human exposure to these substances through inhalation ingestion or dermal contact raising public health concerns Furthermore the NMs specific physicochemical properties that confer them unique beneficial characteristics can also elicit nano bio interactions leading to toxicity and concerns for public health In addition such properties can be affected by the surrounding matrix particularly when incorporated in complex matrices such as food products leading to secondary features potentially more relevant than primary characteristics for determining their toxicological outcome These nano specific issues raise the question of whether the NMs may produce adverse outcomes that are not accounted for when using conventional toxicological approaches to assess their safety Such uncertainties about the safety of NMs for human health and the environment may hamper a faster and more widespread exploration of their potentials In response the NMs definition has evolved and nanotoxicology has developed towards new and more integrative approach methods to support regulatory and policy actions This book provides a perspective on recent developments in the synthesis application and characterization of NMs and the related nanotechnologies focusing on nanotoxicology for their accurate safety assessment early in the product development stage The use of complex in vitro models including multicellular systems and organoids and omics based approaches such as transcriptomics or epigenomics have greatly contributed to an in depth understanding of the cellular and molecular mechanisms behind some NMs toxicity Such mechanistic knowledge is equally addressed in this book and has set the basis for a predictive nanotoxicology approach building on adverse outcome pathways In addition considering the knowledge provided by the above mentioned approaches insights into risk assessment standardization and regulation of NMs are also included Incorporating adequate nanosafety assessment early in the life cycle of NMs will allow the implementation of the safe and sustainable by design paradigm enabling safety to keep pace with innovation Chapters 10 and 15 are available open access under a Creative Commons Attribution 4.0 International License via
