The Holy Sepulchre** Grazia Tucci, 2019-11-28

Jerusalem is situated in a highly seismic zone and in the past has been the theatre of disastrous earthquakes One of these was the 1927 quake which seriously damaged the Basilica of the Holy Sepulchre A study of the city of Jerusalem has revealed a cyclical pattern of repeated seismic events every 100 years or so The desire to avert a danger foretold in advance lay behind the project described in this volume In 2006 the three Major Communities of the Holy Sepulchre invited a research team from Florence University Architects surveyors geologists and structural engineers conducted the investigations in a highly interdisciplinary collaboration It was an extraordinary opportunity to draw up a complete survey using new technology This resulted in a three dimensional digital model of the structural situation on that date a powerful exhaustive tool for the continuation of further research and documentation in the future *Topographic Laser Ranging and Scanning* Jie

Shan, Charles K. Toth, 2017-12-19 A systematic in depth introduction to theories and principles of Light Detection and Ranging LiDAR technology is long overdue as it is the most important geospatial data acquisition technology to be introduced in recent years. An advanced discussion of this text fills the void. Professionals in fields ranging from geology, geography, and geoinformatics to physics, transportation, and law enforcement will benefit from this comprehensive discussion of topographic LiDAR principles, systems, data acquisition, and data processing techniques. The book covers ranging and scanning fundamentals and broad contemporary analysis of airborne LiDAR systems as well as those situated on land and in space. The authors present data collection at the signal level in terms of waveforms and their properties at the system level with regard to calibration and georeferencing and at the data level to discuss error budget, quality control, and data organization. They devote the bulk of the book to LiDAR data processing and information extraction and elaborate on recent developments in building extraction and reconstruction, highlighting quality and performance evaluations. There is also extensive discussion of the state of the art technological developments used in filtering algorithms for digital terrain model generation, strip adjustment of data for registration, co-registration of LiDAR data with imagery, forestry inventory, and surveying. Readers get insight into why LiDAR is the effective tool of choice to collect massive volumes of explicit 3D data with unprecedented accuracy and simplicity. Compiled by leading experts talking about much of their own pioneering work, this book will give researchers, professionals, and senior students novel ideas to supplement their own experience and practices.

Ecohydrological Response of Dryland Ecosystems to Aridification: The Role of Runoff Water Redistribution Borja Rodríguez Lozano, 2024-11-25 In general, according to our results, we may conclude that the effect of runoff water redistribution by increasing water and related nutrients for vegetation and underlying soil microbial communities buffers the expected negative response of drylands to aridification. The magnitude of this effect depends on the interplay with other environmental factors controlling soil hydrology, such as lithology, legacy on soil properties. Finally, we found that this positive buffer effect could be counterbalanced in areas of high human disturbance as the negative effects of degradation on soils and vegetation could exacerbate runoff and nutrient losses and limit the capacity of the remaining vegetation to trap and retain the runoff water and related nutrients. The new set of allometric equations developed in this thesis for the quantification of green biomass and the proposed ecohydrological index can be easily combined to provide a comprehensive coupled assessment of vegetation dynamics and the related processes of water and nutrient transfer from open spaces to plants. Thus, they constitute crucial tools for evaluating the effects of runoff water redistribution across different spatial and temporal scales and for incorporating these effects on Earth System Models (ESMs).
