Proficiency and Beliefs in Learning and Teaching Mathematics Yeping Li,Judit N. Moschkovich,2013-09-04 Efforts to improve mathematics education have led educators and researchers to not only study the nature of proficiency beliefs and practices in

mathematics learning and teaching but also identify and assess possible influences on students and teachers' proficiencies, beliefs, and practices in learning and teaching mathematics. The complexity of these topics has fascinated researchers from various backgrounds including psychologists, cognitive or learning scientists, mathematicians, and mathematics educators. Among those researchers, two scholars with a similar background, Alan Schoenfeld in the United States and Günter Türler in Germany, are internationally recognized for their contributions to these topics. To celebrate their 65th birthdays in 2012, this book brought together many scholars to reflect on how their own work has built upon and continued Alan and Günter's work in mathematics education. The book contains 17 chapters by 33 scholars from six different education systems. This collection describes recent research and provides new insights into these topics of interest to mathematics educators, researchers, and graduate students who wish to learn about the trajectory and direction of research on these issues.

Mathematics Candia Morgan, Clare Tikly, Anne Watson, 2012-11-12. This accessible and thought-provoking book considers what beginning teachers need to know about learning, teaching, assessment, curriculum, and professional development in the context of teaching mathematics to eleven to nineteen-year-olds. It is part of a new series of books that has as its starting point the fact that PGCE students are already subject specialists. The authors show how mathematics teachers can communicate their own enthusiasm for the subject and inspire their pupils to learn and enjoy learning. They provide practical advice which will help teachers and student teachers to plan, organize, manage, and assess classroom work, make decisions about the content, ordering, and level of difficulty of lessons, make sense of new subject material, and how it contributes to wider educational aims, develop professionally by developing the subject as a whole. This is a comprehensive introduction to teaching mathematics in the secondary school which will be invaluable to teachers beginning their careers and those who are training to be mathematics teachers.
