

MATH REVIEW

Math Review is a study aid for students preparing for the SAT, ACT, and other standardized tests. It covers a wide range of mathematical topics, including algebra, geometry, and statistics. The review is organized into sections, each with a title and a list of topics. The topics are listed in a column on the left, and the corresponding text is in a column on the right. The text is written in a clear, concise, and easy-to-understand style. The review is a valuable resource for students who are preparing for these tests.

ALGEBRA

Variables

A variable is a symbol that represents a number that can change. Variables are used in algebra to represent unknown quantities. They are usually represented by letters, such as x , y , and z . Variables can be used to write equations and inequalities. They can also be used to represent functions. Variables are a fundamental part of algebra and are used in many other areas of mathematics.

Equations

An equation is a statement that two expressions are equal. Equations are used to solve for unknown values. They are usually written in the form $A = B$, where A and B are expressions. Equations can be solved by using various methods, such as substitution, elimination, and factoring. Equations are a fundamental part of algebra and are used in many other areas of mathematics.

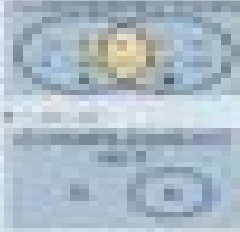

Inequalities

An inequality is a statement that one expression is greater than or less than another expression. Inequalities are used to solve for unknown values. They are usually written in the form $A > B$ or $A < B$, where A and B are expressions. Inequalities can be solved by using various methods, such as substitution, elimination, and factoring. Inequalities are a fundamental part of algebra and are used in many other areas of mathematics.

Functions

A function is a relationship between two sets of objects. A function maps each element of the first set to exactly one element of the second set. Functions are used to model real-world situations. They are usually written in the form $f(x)$, where f is the function and x is the input. Functions are a fundamental part of algebra and are used in many other areas of mathematics.

Graphs

A graph is a visual representation of a function. It shows the relationship between the input and output values of a function. Graphs are used to solve problems and to understand the behavior of functions. They are usually plotted on a coordinate plane. Graphs are a fundamental part of algebra and are used in many other areas of mathematics.

GEOMETRY

Points, Lines, and Planes

Points, lines, and planes are the basic building blocks of geometry. A point is a location in space. A line is a straight path that extends infinitely in both directions. A plane is a flat surface that extends infinitely in all directions. Points, lines, and planes are used to describe the properties of shapes and to solve problems in geometry.

Angles

An angle is formed by two rays that share a common endpoint. Angles are used to describe the properties of shapes and to solve problems in geometry. They are usually measured in degrees. Angles can be classified into different types, such as acute, obtuse, and right angles. Angles are a fundamental part of geometry and are used in many other areas of mathematics.

Triangles

A triangle is a polygon with three sides. Triangles are used to describe the properties of shapes and to solve problems in geometry. They are classified into different types, such as equilateral, isosceles, and scalene triangles. Triangles are a fundamental part of geometry and are used in many other areas of mathematics.

Quadrilaterals

A quadrilateral is a polygon with four sides. Quadrilaterals are used to describe the properties of shapes and to solve problems in geometry. They are classified into different types, such as squares, rectangles, and parallelograms. Quadrilaterals are a fundamental part of geometry and are used in many other areas of mathematics.

Similar Figures

Similar figures are figures that have the same shape but not necessarily the same size. Similar figures are used to describe the properties of shapes and to solve problems in geometry. They are classified into different types, such as similar triangles and similar polygons. Similar figures are a fundamental part of geometry and are used in many other areas of mathematics.

Area and Perimeter

Area and perimeter are two important concepts in geometry. Area is the measure of the space inside a shape. Perimeter is the measure of the distance around a shape. Area and perimeter are used to describe the properties of shapes and to solve problems in geometry. They are classified into different types, such as area and perimeter of a rectangle and area and perimeter of a circle. Area and perimeter are a fundamental part of geometry and are used in many other areas of mathematics.

Volume and Surface Area

Volume and surface area are two important concepts in geometry. Volume is the measure of the space inside a three-dimensional object. Surface area is the measure of the area of the surface of a three-dimensional object. Volume and surface area are used to describe the properties of three-dimensional objects and to solve problems in geometry. They are classified into different types, such as volume and surface area of a cube and volume and surface area of a sphere. Volume and surface area are a fundamental part of geometry and are used in many other areas of mathematics.

STATISTICS

Data

Data is information that is collected and analyzed. Data is used to describe the properties of a population and to solve problems in statistics. Data can be collected in many ways, such as through surveys, experiments, and observations. Data is classified into different types, such as qualitative data and quantitative data. Data is a fundamental part of statistics and is used in many other areas of mathematics.
