Mathematical Sciences And Their Applications Recent Advances:

Mathematical sciences and their applications, 2013 *Recent Advances in Diffeologies and Their Applications*
Jean-Pierre Magnot, 2024-02-02 This volume contains the proceedings of the AMS EMS SMF Special Session on Recent Advances in Diffeologies and Their Applications held from July 18 20 2022 at the Universit de Grenoble Alpes Grenoble France The articles present some developments of the theory of diffeologies applied in a broad range of topics ranging from algebraic topology and higher homotopy theory to integrable systems and optimization in PDE The geometric framework proposed by diffeologies is known to be one of the most general approaches to problems arising in several areas of mathematics It can adapt to many contexts without major technical difficulties and produce examples inaccessible by other means in particular when studying singularities or geometry in infinite dimension Thanks to this adaptability diffeologies appear to have become an interesting and useful language for a growing number of mathematicians working in many different fields Some articles in the volume also illustrate some recent developments of the theory which makes it even more deep and useful **Recent Advances in Operator Theory and Its Applications** Israel Gohberg, 2005-09-16 This book contains a selection of carefully refereed research papers most of which were presented at the fourteenth International Workshop on Operator Theory and its Applications IWOTA held at Cagliari Italy from June 24 27 2003 The papers many of which have been written by leading experts in the field concern a wide variety of topics in modern operator theory and applications with emphasis on differential operators and numerical methods The book will be of interest to a wide audience of pure and applied mathematicians and engineers *The Mathematical Sciences in 2025* National Research Council, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on the Mathematical Sciences in 2025, 2013-06-13 The mathematical sciences are part of nearly all aspects of everyday life the discipline has underpinned such beneficial modern capabilities as Internet search medical imaging computer animation numerical weather predictions and all types of digital communications The Mathematical Sciences in 2025 examines the current state of the mathematical sciences and explores the changes needed for the discipline to be in a strong position and able to maximize its contribution to the nation in 2025 It finds the vitality of the discipline excellent and that it contributes in expanding ways to most areas of science and engineering as well as to the nation as a whole and recommends that training for future generations of mathematical scientists should be re assessed in light of the increasingly cross disciplinary nature of the mathematical sciences In addition because of the valuable interplay between ideas and people from all parts of the mathematical sciences the report emphasizes that universities and the government need to continue to invest in the full spectrum of the mathematical sciences in order for the whole enterprise to continue to flourish long term **Recent Advances in the Theory and Applications of Mass Transport** José-Francisco Rodrigues, 2004 Contains both survey and research articles on methods of optimal mass transport and applications in physics **Recent Advances in Operator**

Theory, Operator Algebras, and their Applications Dumitru Gaspar, Israel Gohberg, Dan Timotin, Florian H. Vasilescu, Laszlo Zsidó, 2006-03-30 The Romanian conferences in operator theory as they are now commonly called have started in the year 1976 as an annual workshop on operator theory held at the University of Timișoara originally only with Romanian attendance. The meeting soon evolved into an international conference with an increasingly larger participation. It has been organized jointly initially by the Department of Mathematics of INCREST and by the Faculty of Sciences of the University of Timișoara then since 1990 by the Institute of Mathematics of the Romanian Academy and the Faculty of Mathematics of the West University of Timișoara. The venue was usually Timișoara and occasionally Herculane, Bucharest or Predeal. Since 1986 the conference has been regularly held biannually at the beginning of the summer. The 19th Conference on Operator Theory OT 19 took place between June 27th and July 2nd 2002 at the West University of Timișoara. It is a pleasure to acknowledge the considerable financial support received through the programme EURROMAT of the European Community under contract ICA1 CT 2000 70022. Partial support has also been provided by the Romanian Ministry of Education Research and Youth grants CERES 152/2001 and 153/2001. The full programme of the conference is included in the sequel. It is worth mentioning also a special event that has taken place during the conference: professor Israel Gohberg has been awarded the title of Doctor Honoris Causa of the West University of Timișoara.
