Warranty and Preventive Maintenance for Remanufactured Products Ammar Y. Alqahtani,Surendra M. Gupta,2018-12-12 The exponential increase in the development of technology coupled with

the customers immense desire to possess the newest technological products makes for truncated product lifespans which instigates a substantial upsurge in their rate of disposal Attempts have been made to establish specialized product recovery facilities with the intention of diminishing the volume of accumulated waste delivered to landfills using product recovery procedure such as remanufacturing The economic benefits produced by remanufacturing also portray the role of product recovery in a more attractive light The quality of a remanufactured product is uncertain for some consumers Therefore these consumers possess insecurities in deciding whether or not the remanufactured products will render the same expected performance This ambiguity regarding a remanufactured product could possibly result in the consumer deciding against its purchase With such consumer apprehension remanufacturers often seek market mechanisms that provide reassurance as to the stable durability that these products still maintain One strategy that the remanufacturers often use is the utilization of the premise of offering product warranties with preventive maintenance on their products This book is concerned with the practice and theory of warranty management and preventive maintenance particularly in relation to remanufactured products warranties Models developed in this book can be used for making the right decisions in offering renewable nonrenewable one and two dimensional warranty policies and for managerial decision in considering maintenance contracts or outsourcing maintenance for remanufactured components and products Features Discusses a variety of warranty policies and preventive maintenance of remanufactured products first book to do so Presents mathematical models and applications for warranty policies using examples and simulation results Considers cost and optimization problems from the remanufacturer s and buyer s points of views Provides a foundation for academicians interested in building models in the area of warranty and preventive maintenance analysis of remanufactured products Offers the essential methodology needed by practitioners involved with warranty and preventive maintenance analysis along with extensive references for further research

System Reliability Assessment and Optimization Yan-Fu Li, Enrico Zio, 2022-06-01 This book offers a comprehensive overview of recently developed methods for assessing and optimizing system reliability It consists of two main parts for treating assessment methods and optimization methods respectively The first part covers methods of multi state system reliability modelling and evaluation Markov processes Monte Carlo simulation and uncertainty analysis The methods considered range from piecewise deterministic Markov processes to belief function analysis The second part covers optimization methods of mathematical programming and evolutionary algorithms and problems of multi objective optimization and optimization under uncertainty The methods of this part range from non dominated sorting genetic algorithm to robust optimization The book also includes the application of the assessment and optimization methods considered on real case studies particularly with respect to the reliability assessment and optimization of renewable energy systems and bridges the gap between theoretical method development and engineering practice *Maintenance models for systems subject to measurable deterioration* Robin Pieter Nicolai, 2008 Complex engineering systems such as bridges roads

flood defence structures and power pylons play an important role in our society Unfortunately such systems are subject to deterioration meaning that in course of time their condition falls from higher to lower and possibly even to unacceptable levels Maintenance actions such as inspection local repair and replacement should be done to retain such systems in or restore them to acceptable operating conditions After all the economic consequences of malfunctioning infrastructure systems can be huge In the life cycle management of engineering systems the decisions regarding the timing and the type of maintenance depend on the temporal uncertainty associated with the deterioration Hence it is of importance to model this uncertainty In the literature deterioration models based on Brownian motion and gamma process have had much attention but a thorough comparison of these models lacks In this thesis both models are compared on several aspects both in a theoretical as well as in an empirical setting Moreover they are compared with physical process models which can capture structural insights into the underlying process For the latter a new framework is developed to draw inference Next models for imperfect maintenance are investigated Finally a review is given for systems consisting of multiple components

Maintenance Management of Wind Turbines Fausto Pedro García Márquez, 2020-12-06 Maintenance Management of Wind Turbines considers the main concepts and the state of the art as well as advances and case studies on this topic Maintenance is a critical variable in industry in order to reach competitiveness It is the most important variable together with operations in the wind energy industry Therefore the correct management of corrective predictive and preventive politics in any wind turbine is required The content also considers original research works that focus on content that is complementary to other sub disciplines such as economics finance marketing decision and risk analysis engineering etc in the maintenance management of wind turbines This book focuses on real case studies These case studies concern topics such as failure detection and diagnosis fault trees and subdisciplines e g FMECA FMEA etc Most of them link these topics with financial schedule resources downtimes etc in order to increase productivity profitability maintainability reliability safety availability and reduce costs and downtime etc in a wind turbine Advances in mathematics models computational techniques dynamic analysis etc are employed in analytics in maintenance management in this book Finally the book considers computational techniques dynamic analysis probabilistic methods and mathematical optimization techniques that are expertly blended to support the analysis of multi criteria decision making problems with defined constraints and requirements
