A Hetero-functional Graph Theory for Modeling Interdependent Smart City Infrastructure Wester C. H. Schoonenberg, Inas S. Khayal, Amro M. Farid, 2018-11-30 Cities have always played a prominent role in the prosperity of civilization Indeed every great civilization we can think of is associated with the prominence of one or more thriving cities And so understanding cities their inhabitants their institutions their infrastructure what they are and how they work independently and together is of fundamental importance to our collective growth as a human civilization Furthermore the 21st century smart city as a result global climate change and large scale urbanization will emerge as a societal grand challenge This book focuses on the role of interdependent infrastructure systems in such smart cities especially as it relates to timely and poignant questions about resilience and sustainability In particular the goal of this book is to present in one volume a consistent Hetero Functional Graph Theoretic HFGT treatment of interdependent smart city infrastructures as an overarching application domain of engineering systems This work may be contrasted to the growing literature on multi layer networks which despite significant theoretical advances in recent years has modeling limitations that prevent their real world application to interdependent smart city infrastructures of arbitrary topology In contrast this book demonstrates that HFGT can be applied extensively to an arbitrary number of arbitrarily connected topologies of interdependent smart city infrastructures It also integrates for the first time all six matrices of HFGT in a single system adjacency matrix The book makes every effort to be accessible to a broad audience of infrastructure system practitioners and researchers e g electric power system planners transportation engineers and hydrologists etc Consequently the book has extensively visualized the graph theoretic concepts for greater intuition and clarity Nevertheless the book does require a common methodological base of its readers and directs itself to the Model Based Systems Engineering MBSE community and the Network Science Community NSC To the MBSE community we hope that HFGT will be accepted as a quantification of many of the structural concepts found in model based systems engineering languages like SysML To the NSC we hope to present a new view as how to construct graphs with fundamentally different meaning and insight Finally it is our hope that HFGT serves to overcome many of the theoretical and modeling limitations that have hindered our ability to systematically understand the structure and function of smart cities

Mouftah,Melike Erol-Kantarci,Mubashir Husain Rehmani,2018-12-28 With the increasing worldwide trend in population migration into urban centers we are beginning to see the emergence of the kinds of mega cities which were once the stuff of science fiction It is clear to most urban planners and developers that accommodating the needs of the

tens of millions of inhabitants of those megalopolises in an orderly and uninterrupted manner will require the seamless integration of and real time monitoring and response services for public utilities and transportation systems Part speculative look into the future of the world s urban centers part technical blueprint this visionary book helps lay the groundwork for the communication networks and services on which tomorrow s smart cities will run Written by a uniquely well qualified author team this book provides detailed insights into the technical requirements for the wireless sensor and actuator networks required to make smart cities a reality *Proceedings of PURPLE MOUNTAIN FORUM 2019-International Forum on Smart Grid Protection and Control* Yusheng Xue,Yuping Zheng,Saifur Rahman,2019-08-08 This book presents original peer reviewed research papers from the 4th Purple Mountain Forum International Forum on Smart Grid Protection and Control PMF2019 SGPC held in Nanjing China on August 17 18 2019 Addressing the latest research hotspots in the power industry such as renewable energy integration flexible interconnection of large scale power grids integrated energy system and cyber physical power systems the papers share the latest research findings and practical application examples of the new theories methodologies and algorithms in these areas As such book a valuable reference for researchers engineers and university students **Power System Modelling and Scripting** Federico Milano,2010-09-08 Power system modelling and scripting is a quite general and ambitious title Of course to embrace all existing aspects of power system modelling would lead to an encyclopedia and would be likely an impossible task Thus the book focuses on a subset of power system models based on the following assumptions i devices are modelled as a set of nonlinear differential algebraic equations ii all alternate current devices are operating in three phase balanced fundamental frequency and iii the time frame of the dynamics of interest ranges from tenths to tens of seconds These assumptions basically restrict the analysis to transient stability phenomena and generator controls The modelling step is not self sufficient Mathematical models have to be translated into computer programming code in order to be analyzed understood and experienced It is an object of the book to provide a general framework for a power system analysis software tool and hints for filling up this framework with versatile programming code This book is for all students and researchers that are looking for a quick reference on power system models or need some guidelines for starting the challenging adventure of writing their own code
