Matrix Metalloproteinase Biology Irit Sagi, Jean Gaffney, 2015 **Matrix Metalloproteinase Biology** Irit Sagi, Jean Gaffney, 2015-05-18 Discussing recent advances in the field of matrix metalloproteinase MMP research from a multidisciplinary perspective *Matrix Metalloproteinase Biology* is a collection of chapters written by leaders in the field of MMPs. The book focuses on the challenges of understanding the mechanisms of substrate degradation by MMPs as well as how these enzymes are able to degrade large highly ordered substrates such as collagen. All topics addressed are considered in relation to disease progression including roles in cancer metastasis, rheumatoid arthritis and other inflammatory diseases. The text first provides an overview of MMPs focusing on the history, the development and failures of small molecule inhibitors in clinical trials and work with TIMPs, the endogenous inhibitors of MMPs. These introductory chapters establish the foundation for later discussion of the recent progress on the design of different types of inhibitors including novel antibody-based therapeutics. The following section emphasizes research using novel methods to further the study of the MMPs. The third and final section focuses on in vivo research particularly with respect to cancer models, degradation of the extracellular matrix and MMP involvement in other disease states. Written and edited by leaders in the field, *Matrix Metalloproteinase Biology* addresses the rapidly growing MMP research and will be an invaluable resource to advanced students and researchers studying cell and molecular biology.

Matrix Metalloproteinases, 1998-03-27 The chapters in this book thoroughly cover the structure, regulation and function of matrix metalloproteinases and provide information on the latest strategies to inhibit enzyme activity. This work will be an indispensable reference tool for investigators with an interest in extracellular matrix biology, matrix turnover, enzymology and biochemistry of proteinases, developmental biology, pathology and therapeutic interventions. Provides state-of-the-art information on a field with broad implications to many areas of biology. Includes detailed coverage of the structure and regulation of all major matrix metalloproteinases. Chapters focus on a timely and expanding field. Topics have direct relevance to understanding human disease, pathology of cancer, arthritis and vascular disease. Discusses latest strategies used in the development of new therapeutics to inhibit metalloproteinase activity.

Matrix Metalloproteinases In Health And Disease: Sculpting The Human Body Constance E Brinckerhoff, 2017-05-05 The biochemistry and cell biology of Matrix Metalloproteinases (MMPs) are not necessarily straightforward but basic information on the history of these enzymes, their various functions that extend far beyond the cleaving of the extracellular matrix and the complex mechanisms that control their expression are valuable to both scientists and clinicians. This volume summarizes the salient features and functions of MMPs and applies this information in a practical manner in order to understand how they contribute to normal physiology and pathology of selected diseases. Chapters by noted clinicians: Jean Michel Dayer MD in rheumatology, Jian Cao MD in oncology and Peter Libby MD in cardiology represent important practical and clinically oriented contributions.
