HL Paper 2

Benzoic acid, $\text{C}_6\text{H}_5\text{COOH}$, is another derivative of benzene.

- Identify the wavenumber of one peak in the IR spectrum of benzoic acid, using section 26 of the data booklet. [1]
 - Identify the spectroscopic technique that is used to measure the bond lengths in solid benzoic acid. [1]
 - Outline one piece of physical evidence for the structure of the benzene ring. [1]
 - Draw the structure of the conjugate base of benzoic acid showing **all** the atoms and **all** the bonds. [1]
 - Outline why both C to O bonds in the conjugate base are the same length and suggest a value for them. Use section 10 of the data booklet. [2]
- f(i). The pH of an aqueous solution of benzoic acid at 298 K is 2.95. Determine the concentration of hydroxide ions in the solution, using section 2 of the data booklet. [2]
- f(ii) Formulate the equation for the complete combustion of benzoic acid in oxygen using only integer coefficients. [2]
- The combustion reaction in (f)(ii) can also be classed as redox. Identify the atom that is oxidized and the atom that is reduced. [1]
 - Suggest how benzoic acid, $M_r = 122.13$, forms an apparent dimer, $M_r = 244.26$, when dissolved in a non-polar solvent such as hexane. [1]
 - State the reagent used to convert benzoic acid to phenylmethanol (benzyl alcohol), $\text{C}_6\text{H}_5\text{CH}_2\text{OH}$. [1]

A student performs a titration to determine the concentration of ethanoic acid, CH_3COOH , in vinegar using potassium hydroxide.

The pH curve for the reaction is given.

Impact of Aerosols (Saharan Dust and Mixed) on the East Mediterranean Oligotrophic Ecosystem, Results from Experimental Studies Paraskevi Pitta, Barak Herut, Tatiana M. Tsagaraki, 2017-11-16 In oligotrophic environments dust and nutrient inputs via atmospheric routes are considered important sources of macro nutrients and micro trace metals fuelling primary and secondary production Yet the impact of these dust inputs on the microbial populations is not fully investigated in the Eastern Mediterranean Sea EMS The response of oligotrophic systems to dust inputs whether as positive or negative feedbacks to autotrophic and heterotrophic production and thus to biogeochemical cycling is important to examine further Experimental studies have explored nutrient additions in various combinations to determine the limiting resource to productivity or N₂ fixation Recent experimental studies have applied dust enrichments to bottle or mesocosm incubations of seawater from different oceanic regions This research topic presents two Eastern Mediterranean dust addition mesocosm experiments using for the first time real aerosol additions pure Saharan dust and mixed aerosols a natural mixture of desert dust and polluted European particles as well as other EMS aerosol experimental studies The Topic includes manuscripts introducing results on a the impact of Saharan dust vs mixed aerosols on the autotrophic and heterotrophic surface microbial populations in the EMS b the impact of single vs multi pulses of Saharan dust introduction into the pelagic environment of the EMS and c other experimental studies of aerosol impacts on the EMS ecosystem **Sustainable Water Technologies** Daniel H. Chen, 2016-10-14 Development of advanced technologies is a critical component in overcoming the looming water crisis Stressing emerging technologies and strategies that facilitate water sustainability for future generations the second volume in the two volume set Sustainable Water Management and Technologies provides current and forthcoming technologies research development and applications to help ensure availability of water for all The book emphasizes emerging nanotechnology biotechnology and information technology applications as well as sustainable processes and products to protect the environment and human health save water and energy and minimize material use It also discusses such topics as groundwater transport protection and remediation industrial and wastewater treatment reuse and disposal

membrane technology for water purification and desalination treatment and disposal in unconventional oil and gas development biodegradation and bioremediation for soil and water Stresses emerging technologies and strategies that facilitate water sustainability Covers a wide array of topics including drinking water wastewater and groundwater treatment protection and remediation Discusses oil and gas drilling impacts and pollution prevention membrane technology for water desalination and purification biodegradation and bioremediation for soil and water Details emerging nanotechnology biotechnology and information technology applications as well as sustainable processes and products

Management of Greywater in Developing Countries Radin Maya Saphira Radin Mohamed, Adel Ali Saeed Al-Gheethi, Amir Hashim Mohd Kassim, 2018-05-04 This book reviews the consequences of improper disposal of greywater into the environment and the most appropriate treatment technologies for developing countries focusing on the potential to reuse greywater as a production medium for biomass and bio products It also describes the quantities and qualitative characteristics as well as the common practice of discharging greywater in developing countries and highlights the associated health risks Further it compares the management of greywater in developed and developing countries and explores the advantages and disadvantages of various treatment technologies discussing the reuse of greywater for irrigation purposes in arid and sub arid countries especially in the Middle East The book shows the benefits of greywater and introduces low cost technologies based on the available local facilities can be used to discharge reuse and recycle it

Homeostasis and Allostasis of Thyroid Function Johannes W. Dietrich, John E. M. Midgley, Rudolf Hoermann, 2018-08-29 The discovery of the negative feedback of thyroid hormones on pituitary thyroid stimulating hormone TSH secretion a classical endocrine feedback control system has shaped diagnosis and treatment of thyroid disease for the last decades Based on this concept a unique diagnostic category of subclinical thyroid disorders was introduced being defined exclusively by an abnormal TSH response in the presence of thyroid hormone concentrations within the reference range Although this approach was able to

deliver a conceptually straightforward disease definition problems surfaced in clinical practice as neither the diagnostic reference range nor the appropriate threshold for initiating substitution treatment are universally agreed upon for subclinical thyroid disorders The situation is further aggravated by the so called syndrome T which comprises a substantial but heterogeneous group of L T4 treated patients with hypothyroidism with reduced quality of life despite normal TSH values A limited understanding of the physiological relationships between TSH and thyroid hormones may be a main reason for clinical difficulties in dealing with the causes of syndrome T and tailoring substitution therapy for hypothyroid patients with subclinical thyroid disorders Feedback regulation has recently been shown to be much more complex than previously assumed The concept of homeostatic control has also been extended to include the lesser known but equally important allostatic thyroid regulation The latter aims at adaptive homeostasis or stability through changing setpoints and modulating structural parameters of feedback control as may be appropriate to adapt to a vast array of conditions spanning from fetal life aging pregnancy exercise starvation obesity psychiatric disorders to the severe non thyroidal illness syndrome A better understanding of homeostatic and allostatic mechanisms which govern the behaviour of pituitary thyroid feedback control is on the horizon This promises to improve the diagnostic utility of laboratory methods laying the foundation for personalised methods to optimise dosage and modality of substitution therapy The emerging new world of thyroid physiology is reflected on the side of clinical medicine in a new relational paradigm for diagnosis and treatment Considerable progress has been made in this respect in the following key areas the significance of complementary information processing structures within the feedback loop in particular ultrashort feedback of TSH on its own secretion and the action of a TSH T3 shunt unburdening the thyroid from T4 synthesis in imminent thyroid failure the unravelling of spatio temporal dynamics of hormone concentrations ranging from ultradian to circannual rhythms and including hysteresis effects the emergence of non canonical mechanisms of thyroid hormone signalling beyond transcriptional control of gene expression the physiological actions of thyronine metabolites which have been previously regarded as biologically inactive such as thyronamines and iodothyroacetates the characterisation of distinct patterns in the adaptive processes to stress and strain and their conclusive explanation through reactions to type 1 and type 2 allostatic load This collective volume contains the contributions to the Research Topic Homeostasis and Allostasis of Thyroid Function which was originally published by the journal Frontiers in Endocrinology Authored by an international team of experts from three continents the book provides a comprehensive overview on thyroid control from recent research in basic computational and clinical thyroidology Many aspects addressed here can be expected to stimulate future research A more comprehensive view and better integration of in vitro in silico and in vivo investigations will be invaluable in paving the way to this new world of thyroidology Firestein & Kelley's Textbook of Rheumatology - E-Book Gary S.
