## **Handbook Of Slope Stabilization Engineering:**

**Handbook of Slope Stabilisation** J. A. R. Ortigao, Alberto Sayao, 2013-03-09 This book is aimed at the practising engineer and engineering geologist working in tropical environments where landslides are mainly triggered by rain fall This book is based on a similar work published in 1999 in Portuguese which became the Rio de Janeiro Slope Manual This book is an engineering guide for the design of slopes and stabilisation works in rocks and residual soils It evolves from the cumulative experience gathered by several engineers and geologists who faced severe slope problems The authors experience throughout Central and South America Costa Rica Argentina Bolivia Peru Ecuador and Venezuela and the Far East especially Hong Kong and Malaysia was used as a foundation for writing this book The work also benefits enormously from the time spent in Hong Kong in 1996 and 1997 by the first editor on sabbatical at the City University of Hong Kong and the discussions he had with many colleagues from the Geotechnical Engineering Office GEO of the Hong Kong Government especially Dr A Malone Mr W K Pun Dr A Li Mr K Ho and Mr Y C Chan among others Biotechnical and Soil Bioengineering Slope Stabilization Donald H. Gray, Robbin B. Sotir, 1996-08-23 The first comprehensive practical guide to the selection construction and installation of soil bioengineering and biotechnical slope protection Here is the ultimate guide to physically attractive environmentally compatible and cost effective methods of protecting slopes from erosion and mass wasting Lavishly illustrated with more than 150 photographs and supplemented with scores of charts and tables this book covers the entire subject from general principles and background on the nature of soil erosion and mass movement to detailed information on root strengths treatment selection unit costs critical tractive stresses methods for harvesting and handling live cuttings and more Four illustrated case studies each addressing a different set of problems and solutions demonstrate both the application of particular technologies and the site investigation planning scheduling and organization required to complete these projects successfully This unique reference handbook Reviews the horticultural and engineering underpinnings for biotechnical and soil engineering treatments Documents and explains the role of woody plants in stabilizing slopes against both surficial erosion and mass movement Provides details on a broad range of soil bioengineering methods including live staking live fascines brush layering live crib walls branch packing and live slope gratings Describes various biotechnical methods and materials including the incorporation of vegetation in erosion control blankets flexible mats cellular revetments geocells rock armor riprap and gabion and open front crib walls Summarizes the findings of the National Science Foundation sponsored workshop to assess the state of the art and determine research needs For practicing professionals researchers and students in geotechnical engineering geology soil science forestry and forest engineering landscape architecture environmental horticulture and restoration ecology this book offers thorough up to date coverage that is not available from any other single source *Handbook of Slope Stabilisation* J a R Ortigao, Alberto Sayao, 2014-01-15

**Foundation Engineering Handbook** Hsai-Yang Fang, 2013-06-29 More than ten years have passed since the first

edition was published During that period there have been a substantial number of changes in geotechnical engineering especially in the applications of foundation engineering As the world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used Such areas include problematic soil regions mining subsidence areas and sanitary landfills To overcome the problems associated with these natural or man made soil deposits new and improved methods of analysis design and implementation are needed in foundation construction As society develops and living standards rise tall buildings transportation facilities and industrial complexes are increasingly being built Because of the heavy design loads and the complicated environments the traditional design concepts construction materials methods and equipment also need improvement Further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction

Cost-effective and Sustainable Road Slope Stabilization and Erosion Control Laura Fay, Michelle Akin, Xianming Shi, National Cooperative Highway Research Program, 2012 In the United States it is estimated that 75 percent of all roads are low volume roads maintained by some 35 000 local agencies Low volume roads often omit surface slope protection and this can lead to slope failure erosion and maintenance safety and ecological issues This report presents information on cost effective and sustainable road slope stabilization techniques with a focus on shallow or near surface slope stabilization and

related erosion control methods used on low volume roads To fully address this topic planning and site investigation are discussed as well as erosion control techniques soil bioengineering and biotechnical techniques mechanical stabilization and earthwork techniques Information presented in this report was obtained through an extensive literature review and from survey and interview responses From the survey responses 30 individuals were interviewed based on the information they made available in the survey A total of 25 interviews were conducted over the phone and in two cases written responses were received Preface

**Geotechnical Engineering Investigation Handbook** Roy E.
