Handbook of Austrian Economics Peter J. Boettke, Christopher J. Coyne, 2015-09-01 The Austrian School of Economics is an intellectual tradition in economics and political economy dating back to Carl Menger in the late 19th century Menger stressed the subjective nature of value in the individual decision calculus Individual choices are indeed made on the margin but the evaluations of rank ordering of ends sought in the act of choice are subjective to individual chooser For Menger the economic calculus was about scarce means being deployed to pursue an individual's highest valued ends The act of choice is guided by subjective assessments of the individual and is open ended as the individual is constantly discovering what ends to pursue and learning the most effective way to use the means available to satisfy those ends This school of economic thinking spread outside of Austria to the rest of Europe and the United States in the early 20th century and continued to develop and gain followers establishing itself as a major stream of heterodox economics The Oxford Handbook of Austrian Economics provides an overview of this school and its theories The various contributions discussed in this book all reflect a tension between the Austrian School's orthodox argumentative structure rational choice and invisible hand and its addressing of a heterodox problem situations uncertainty differential knowledge ceaseless change The Austrian economists from the founders to today seek to derive the invisible hand theorem from the rational choice postulate via institutional analysis in a persistent and consistent manner Scholars and students working in the field of History of Economic Thought those following heterodox approaches and those both familiar with the Austrian School or looking to learn more will find much to learn in this comprehensive volume **Handbook of Forest Resource Economics** Shashi Kant, Janaki Alavalapati, 2014-04-03 It is increasingly recognized that the economic value of forests is not merely the production of timber Forests provide other key ecosystem services such as being sinks for greenhouse gases hotspots of biodiversity tourism and recreation They are also vitally important in preventing soil erosion and controlling water supplies as well as providing non timber forest products and supporting the livelihoods of many local people This handbook provides a detailed comprehensive and broad coverage of forest economics including traditional forest economics of timber production economics of environmental role of forests and recent developments in forest economics The chapters are grouped into six parts fundamental topics in forest resource economics economics of forest ecosystems economics of forests climate change and bioenergy economics of risk uncertainty and natural disturbances economics of forest property rights and certification and emerging issues and developments Written by leading environmental forest and natural resource economists the book represents a definitive reference volume for students of economics environment forestry and natural resource economics and management **The Austrian School**

Determinism, Causality and Explanation in Economics Dawid Megger, 2025-06-27 In recent years the concepts of determinism causality and explanation have taken on particular importance in the economic literature Due to the failures of economic predictions based on mathematical models philosophers and economists turned their attention to methodological issues At the same time heterodox approaches to economics have received increased attention including the Austrian school of economics an intellectual tradition that perceives economics as a science of human action and has emphasised the role of causal explanations practically from its inception This book opens by exploring disputes in the philosophy of science over the fundamental goal of science While instrumentalists argue that scientists should aim at good predictions regardless of the veracity of theories according to scientific realists they should look for knowledge that reflects reality The book shows that the Austrian tradition adheres to scientific realism and can be perceived as a middle ground between historicism and positivism It discusses the determinism free will problem in economics and its methodological relevance Then it examines various theories of causality regularity counterfactual interventionist probabilistic and process mechanistic and their applicability to economics Finally it explores possible and desirable types of explanations in economics As the book tries to show the Austrian school offers a unique and valuable approach to these issues The book will be of particular interest to readers in economic theory philosophy of economics and economic methodology especially those appreciating heterodox traditions
